Despite financial losses, bad publicity and a class action suit . . .

Eastern claims to be on the rebound

By DIETER KRIEG

BIRD-IN-HAND — Two top officers of Eastern Milk Producers Cooperative told a group of district officers Wednesday night that their dairy organization is making definite progress in licking its financial woes. It was noted that marketing costs for March of this year were less than a sixth of what they were for March of 1978 and that the cooperative is now at the point where a dedicated membership can work for continued solidarity and financial stability. Arden Tewksbury, president of Eastern, commented that the turmoil experienced by Eastern in the past year is causing the membership to "tighten" and work more coherently.

Also addressing the assembly of some 50 people was Franklin Wagner, secretary of the Syracuse, N.Y.-based milk marketing organization. Wagner is a dairy farmer from near Hershey, Dauphin County.

Wagner and Tewksbury both gave encouraging and spirited reports, while at the same time acknowledging that Eastern has had, and continues to have financial and publicity problems. "We were in a weak marketing position, and we haven't always been successful, but overall, Eastern has a record of success," said Wagner. Commenting on the membership, he declared "it is extremely important that we maintain our membership level and get more members."

Franklin Wagner

Arden Tewksbury

Tewksbury's and Wagner's comments were primarily directed at three problems, all of them related. They were: Eastern's association with the Leprino Cheese Company, and its new milk handling plants at Horse Heads and Waverly; negative publicity that has appeared about Eastern's management and financial dealings; and a pending class action suit against present and former directors.

Wagner and Tewksbury assured the group that the charges placed against Eastern are unfounded and the

Hog outlook mixed, farmers hopeful

By KENDACE BORRY

LITITZ — In February of 1979, slaughter hog prices hit a record high price of 58.50 in the Lancaster County markets, but since then, area hog producers relate, the price has been steadily dropping, to the point where this week at the Wednesday market sale at the Lancaster Stockyards slaughter hogs were reported slow, opening 50 cents lower, and U.S. No. 1 to 2, weighing 200 to 240 pounds, sold for $43.00 to $43.50 per hundredweight.

According to H. Louis Moore, livestock marketing specialist for Penn State, hog producers were favored with good returns in recent years because of the relatively tight supplies of pork. He noted that hog prices at leading markets averaged $41.30 in 1977, and $48.46 in 1978.

Mainly due to these high prices, Moore reasoned in a recent livestock marketing information newsletter, farmers have been doing major expansion in the hog industry. He notes that farrowings in the December 1978 to February 1979 were up 16 per cent and farrowings in the March to May period are expected to be up about 24 per cent.

This, he reasons, could easily result in an 18 per cent increase in pork production in the last half of 1979. It is possible, he states, that hog marketings in the fourth quarter of this year will be the largest since the fourth quarter of 1970.

Area producers are watching the prices of hogs, but they do not seem to be too concerned yet.

Abe Fisher, Kinzer R1, noted that the expansion that was started last Summer and Fall is still continuing.

"It takes a year to really get going," he explained. "Now those houses which were planned last year are getting started. And it's going to be tough to get going at market prices of 42 and 43 cents. The breakeven selling price for hogs is between 38 and 43 cents per pound."

"But we look forward to prices edging up during the Summer," he continued. "Tradionally prices rise in June and July as there are less pigs around."

"Now if they don't rise, and we start the Fall slide, and prices will drop in the Fall, that means that prices will drop that much more. If the present hog situation continues throughout the Summer as it is, the price may even go lower than 38 cents."

"This means that the guys in the hog finishing business are finally losing money," he stated. "Those who purchased feeder pigs at $1.20 to 1.30 per pound are losing money."

"But there still is a great demand for feeder pigs. The increased number of finishing units that were put up allows a greater demand than the market calls for. This has been the situation for the last month."

(Turn to Page 43)

Hallowell gives clean bill of health

HARRISBURG – Pennsylvania Agriculture Secretary Penrose Hallowell last week announced that tests conducted on feed, grass and water samples, as well as additional blood and milk sample tests on the Lancaster County farm of Clair Hoover have found no evidence that radioactivity caused the sickness and deaths of cattle on the farm.

Hallowell also said that a survey of most farms within a five-mile radius and other large dairy farms outside the five-mile radius of the Three Mile Island nuclear facility had shown no other patterns of unexpected deaths or illnesses of livestock.

"Our tests show that the health problems among the cattle on Clair Hoover's farm seem to be unrelated to radioactive emissions from the Three Mile Island facility," said Hallowell. "In addition, other farmers in the area have not reported any similar unusual death rates in their herds."

Hallowell said that results of analysis of raw milk, water and grasses sampled at the Hoover farm all showed no detectable levels of radiation. Blood tests on approximately 25 samples from cows and heifers on the Hoover farm were checked and showed no evidence of anemia. The blood samples from cows on the farm were negative for leptspirosis, a disease sometimes responsible for jaundice. In addition, a blood study showed no abnormal cell types or any depression in the numbers of thrombocytes. Blood tests on two other cows have been checked for leukemia and are negative.

Hallowell said that last week's, survey results had been compiled for 92 farms with 7,900 dairy cattle, 1,100 beef cattle, 475 swine, 100 sheep, 70 horses and 18 goats.

Hallowell said a survey of veterinarians who practice large animal medicine in the 10-mile zone is almost complete. Initial reports from five of the seven veterinarians indicate that their farmers have not had any inexplicable medical problems in their herds.

Hallowell said the autopsy on one cow brought into the agricultural department's laboratory at Summerdale from Clair Hoover's Bainbridge dairy farm showed that the animal died as a result of an infection of the uterine tract and complications related to the strain of calfing. Hallowell said if any other cattle die, their carcasses would be subjected to a similar

DEKALB BROWN & WHITE EGG LAYERS
HUBBARD WHITE MT. BROILERS

From mother to market, we formulate feeds and feeding programs with your profit in mind.

Does pork production represent a sizeable part of your income? Are you ready to devote an hour or so of your time *planning* for a more profitable future?

If your answer to both questions is yes, you owe it to yourself to read what we have to say.

Unlike many other feed companies, we develop feeding and management programs for each individual operation

It all starts with a Pennfield man reviewing your operation with you. Your goals. Your records. Whether you farrow and finish your own pigs or buy feeder pigs. Your management practices. The health and overall condition of your herd. And other factors that have an effect on your profit potential.

With the aid of computers, we then design programs that can improve your profits by reducing expenses, improving performance, or both.

For example, many producers who switched from a competitive program to a Pennfield program have cut their feed costs and their hogs go to market sooner. In effect, the Pennfield program is putting more money in their pockets.

There is no cost—or obligation—for this unique service. But you must take the first step by writing or phoning us. Do it today.

Pennfield Feeds, 711 Rohrerstown Rd., Lancaster, PA 17604. Local calls: Lancaster 299-2561, Red Lion 244-4511. In 717 and 215 areas dial toll free 800-732-0467.

Livestock market and auction news

Omaha Cattle

May 31, 1979

CATTLE: Closing prices on slaughter steers 1.00 lower, instances 1.25 off. Heifers closed 1.00-1.50 lower, some instances 1.75-2.00 off late. Cows were 1.00-1.50 lower and bulls steady. Fleshy two-way feeder steers sold fully 1.00 lower.

Three day receipts 12,600 compared 13,090 for four days last week and 15,080 a year ago.

The fed cattle trade was generally bearish following the long Memorial Day weekend, and prices declined sharply in reflection of a downtrending carcass trade. Trading was usually a slow, deliberate affair as buyers sought to maintain an acceptable ratio between live prices and current carcass realizations. One major buying interest was still off the market for the entire period. The downturn in live prices was often eased somewhat by increased waterfills resulting from warm, humid weather. The overall finish of the steer supply was fairly attractive with a fairly liberal percentage choice and several loads Choice and Prime. Much of the heifer supply was Good to Average-Choice. Slaughter steers made up approximately 47 pct and heifers 33 pct. Cows comprised 12 pct and feeders 7 pct.

STEERS: Early, five loads Choice and Prime 3-4 1013-1365 lbs. 73.75. At midweek, three loads Choice predominantly 3 1187 lbs. 73.25, load and part load Choice and Prime 1182-1255 lbs. 73.00. Choice 2-4 1025-1275 lbs. 71.50-72.75. Load Choice and Prime 1319 lbs. large percentage 4 71.50. Mixed Good and Choice 2-3 1000-1250 lbs. 70.50-71.50, holsteins 68.50-68.75 Good 2-3 68.50-70.00.

Average of LS-214, detailed quotations for Choice 900-1100 lbs. steers this week 72.16; Choice 1100-1300 lbs. 72.28. Average weight steers for two days this week 1181 lbs. as compared 1183 lbs. the previous week. Average weight heifers for two days this week 1016 lbs. as compared 955 lbs. the previous week.

HEIFERS: Early, two loads Choice 3 1159 lbs. 73.00, several consignments Choice and Prime 3-4 975-1025 lbs. 72.50. At midweek, three loads Choice and Prime 3-4 993-1046 lbs. 71.50. Choice 2-4 850-1075 lbs. 69.50-71.00. Mixed Good and Choice 2-3 850-1050 lbs. 69.00-70.00. Good 2-3 64.00-68.00.

COWS: Utility and Commercial 2-4 53.00-55.00, few 55.50-56.00. Cutter 50.00-53.00. Canner and Low-Cutter 48.00-50.50.

BULLS: 1-2 1400-2300 lbs. 64.00-70.00, individual 1 71.00-72.00.

FEEDERS: Choice 1050-1125 lbs. steers 72.50-73.50, early 71.50-72.50 later.

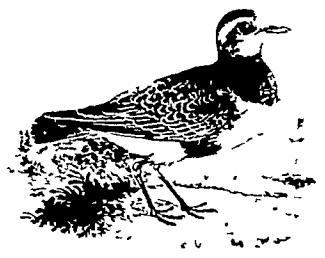
Livestock market and auction news

THE OLD FARMER'S ALMANAC

JUNE 4-10, 1979

To a cow now, it's just a matter of getting fatter

Fish for horned pouts at night now Radio networks born June 7 1923 Full moon June 10 Average length of days for the week, 15 hours, 11 minutes D-Day anniversary June 6 1944 Vacuum cleaner patented June 8 1869 Daily thunderstorms begin in Florida, through August Wit without discretion is a sword in the hand of a fool



Ask the Old Farmer Can you tell me why it is that horseback riders of the East and Europe manage to get along with a minimum of trappings, while our Western riders are encumbered by heavy bulky accouterments? T F, Baltimore

Almost every detail of the Westerner's riding outfit has a practical use — high boot heels so the foot won t slide through the stirrup hoods or "tapederos" on the stirrups to keep his boots from being torn by briars and to keep his feet from freezing in cold weather chaps for warmth and protection, and so-on Nothing is decorative

Home Hints Vinegar set in an open dish absorbs the odor of smoke

OLD FARMER'S WEATHER FORECASTS

New England: Cool with light drizzle west to start, then sunny, warm with few showers

Greater New York-New Jersey: Sunny all week, cool to start then hot with scattered showers

Middle Atlantic Coastal: Week begins partly cloudy and very cool then warm and showery

Piedmont & Southeast Coastal: Cool with some showers clearing and hot at midweek, then scattered showers

Joliet Cattle

May 31, 1979

CATTLE: Friday through Wednesday's salable receipts 3,900, 5 days last week 4,339, same period last year 6,089. Trading extremely slow for the week. Slaughter steers closed the week 1.00-2.50, mostly 2.00-2.50 lower than Wednesday of last week, with the most decline on weights over 1200 and on yield grade 4 and 5 steers. Slaughter heifers closed the week 75 to 1.00, instances 1.25 lower than Wednesday of last week. Cows closed the week 50 lower.

SLAUGHTER STEERS: Mixed high Choice and Prime 3-4, few 5, 1150-1350 lbs. 73.00-73.50, 2 loads 73.75 Tuesday; 71.00-72.00, load 4-5 1260 lbs. 69.50 Wednesday. Choice 2-4 1050-1300 lbs. 72.00-73.50, 1 load 73.75 Tuesday; 71.50-72.50. Mixed Good and Choice 2-3 1000-1250 lbs. 71.00-72.00 Tuesday; 70.50-71.50 Wednesday. Load choice holsteins 1600 lbs. 67.50 Wednesday.

Nuclear energy advisor to address poultry conference

HARRISBURG - A consultant on energy matters will address poultrymen at the 1979 Pennsylvania Poultry Conference on June 21, at the Host Corral in Lancaster. Charles Robbins, former President of the Atomic Industrial Forum, will speak on "The Energy Mess". The Atomic Industrial Forum is a non-profit association of 600 private and governmental organizations in 25 countries which are interested or engaged in nuclear energy Robbins has represented industry and the United States Government overseas on the peaceful uses of nuclear energy.

Although the conference is three separate conferences for broilermen, eggmen, and turkeymen, Robbins will address all the conferees just before lunch Likewise, Dale Murphy of the Pennsylvania Petroleum Association will address the entire conference at the end of the day reporting on fuel supplies for the Northeast. These two aspects of energy are the most critical and conference attendees should get an up-to-the-minute briefing by the two speakers.

The conference begins at 9:30 a.m. and concludes at 4 p m. with the federation annual banquet in the evening beginning at 6 p.m.

The Host Corral is located on U.S. Route 30, three miles east of Lancaster. For further information or advance registration forms, one can contact the Pennsylvania Poutry Federation, 500 N. Progress Ave., Harrisburg, Pa. 17109 or call that office at 727-652-7530.

Md. farmers, food processors, watermen assured fuel

ANNAPOLIS, Md – For the next two months when it comes to the diesel fuel line, farmers, food processors, and watermen get first place according to Maryland Secretary of Agriculture Wayne A. Cawley, Jr

"There seems to be some confusion as to the status of priority for diesel fuel," Cawley says. "Make no mistake about it, food production comes first! The latest fuel allocation program assures that farmers can get the diesel fuel they need to plant their crops, processing plants will keep working and watermen can go about their trade of catching fish, clams and crabs"

"There are a few questions and answers that might help clear the air," Cawley said·

Q How will the President's diesel allocation announcement affect farmers?

A. Through July 31, 1979, farmers are entitled to 100 per cent of their diesel requirements. Farmers and other specified agricultural users are to receive their current diesel fuel requirements, and remaining diesel supplies will be apportioned among other users.

Q. Who in agriculture is covered by this program?

A. "Agricultural production" includes all activities involved in farm production, forestry and fishing, and in the processing and preparation of farm products into final consumer products. The Agricultural Stabilization and Conservation Service (ASCS) state and county offices has information about this.

Q. From a farmer's perspective, how does the program work?

A. If additional diesel fuel is needed for production, an order is placed with the local distributor. Once the need for diesel is confirmed by the local distributor, the full diesel requirements should be delivered to the farmer. (When requested, County ASCS offices will provide information to help determine the diesel requirements of individual farmers.) If necessary to meet agricultural needs, a distributor must reallocate diesel from nonagricultural stomers, then seek :plenishment from his wholesale supplier.

Q. What if a farmer's local dealer cannot get diesel fuel now?

A The U.S. Department of Energy (DOE) can require wholesale suppliers of diesel fuel to provide local distributors with supplies sufficient to meet farmers' needs. If necessary, refineries can be instructed to move diesel fuel to wholesale suppliers in agricultural areas. The Department of Agriculture through ASCS offices will work with DOE and State energy offices to see that agricultural production needs are identified and met.

Q. How will this program mesh with the four per cent State set-aside fuel program?

A. The Federal mandatory allocation program for agricultural users supplements the four per cent State set-aside program.

Q. Will agricultural producers be forced to pay more for priority diesel fuel?

A. No. DOE regulations require that diesel fuel be supplied for agricultural production at non-discriminatory prices.

Language of the auction defined

WEST CHESTER – The auction is a unique way to buy and sell. Like other businesses, there is a "jargon" or language that may puzzle newcomers. And to add to the confusion, the pace is generally double-time.

Your "credit card" is usually a large white card with a number plainly marked in black. This card is used to charge your purchases until the end of the auction. This assigned number, plus the identifying feature about your location, pinpoints you. For example, you might be identified as "47 under the double-tree". Numbers are recorded and distributed by the clerk who keeps track of every item sold and accepts payment.

The block is the real, or imagined, podium of the auctioneer and confirms the item is offered for sale. A lot is a group of items belonging to one seller (at a house or estate sale, there should be no lots; this indicates the auctioneer is "padding" the sale with items from another location. This method is sometimes to "salt" a poor collection of contents with antiques to draw dealers and collectors.).

The runner brings the item to the block, displays it for the audience, and finally delivers it to your lap, or your pile depending on the size of the item.

Except for the opening bid, you do not usually need to vocalize an amount; holding up your card, nodding your head (or shaking to stop), lifting a finger, or waving a hand indicates you are still in or bidding.

Tiny flake usually means a good-sized chip and little hairline is a crack. Been repaired means the flaw shows. No matter what the auctioneer says about the insignificance of the defect, it is still a damaged piece which will not improve with age and lowers the value of the item.

You're out, want in? means two other bidders have surpassed you, and the auctioneer is giving you a chance to continue bidding.

Going, going, gone! is supposed to mean the bidding is over, but some auctioneers have been known to stretch the traditional two "goings." Gone! is the final word, however.

A dispute simply means that someone bidding was not seen by the auctioneer usually because there were two bidders in a direct line, each believing their bid was being received. The object is then put up for bid between just those two individuals.

EFFECTIVE--YOU BET!

DEALER INQUIRIES INVITED

EDITORIAL COMMENTS By DIETER KRIEG, EDITOR

Is good news really no news?

The old adage that good news is no news has been confirmed once again

Last week an effort was made by some people to show that Pennsylvania's farming communities were healthy In wake of all the reports and documentaries on the accident at Three Mile Island and its aftermath that is certainly good news It's welcome news - at least to most of us But evidently not to the big news chiefs around the country, and some stubborn individuals who are bent on believing nothing but the worst

The wire services didn't think that a story about healthy cattle near Three Mile Island was worth covering Dead ones would have been another matter

When the stories coming out of the Harrisburg area were negative, everybody wanted to write and talk about it in the media Give'em a positive story and it doesn't go too far Granted, some newspapers in the area carried the story, and they did so quite well, but that information didn't reach New York and Chicago, etc where the positive effort is needed most And in all cases the good news didn t make page 1 in the daily papers Maybe that space is reserved for depressing and upsetting news only

To many people that may not make much difference one way or another

On the other hand there's the lady in New York, for example, who refused to go to Allentown with her husband because she is convinced that Pennsylvania is contaminated with radiation For every person with such an attitude, I wonder how many rumors and fears are spread about our part of the country And I'm convinced that those type of people would never knowingly drink a drop of milk or take a bite of beef that came from Pennsylvania All that just because the negative stories get top billing and the positive ones get tossed out or buried on an inside page somewhere

As a result, our image was hurt

One newspaper columnist observed that while the crisis at Three Mile Island was going on, the reporters and editors were anxious to the point of almost hoping that each day would give them a more sensational story When the reactor cooled down some news media personnel were disappointed instead of relieved the writer observed They were thriving on the negative

Is this what life is all about?

We have no choice in accepting unfortunate circumstances when they happen But why must we be deprived of the opportunity to read and hear the good news when we or others are fortunate?

Is there no room for encouraging reports?

My hat is off to those individuals who have done what they could to be a positive and honest source of information

The general public needs ambassadors who are willing to give all the facts, not just the negative ones

A tip of the hat is also due to the many scientists and researchers and official spokesmen who worked and are still working on the question of whether or not radiation may have actually damaged our agriculture or worse yet our families They are working not only with the problem of finding and identifying and assorting and answering What they do takes time A simple sample of soil sent to Penn State for example takes two weeks to return sometimes longer What's more, these scientists are also working with the human elements of emotionalism and suspicion They must sift through all of that, and more and come up with realistic, honest answers

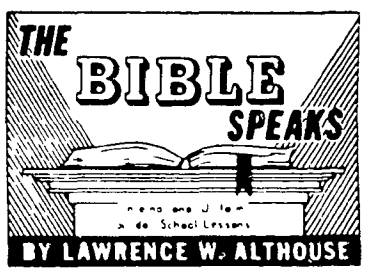
They assure us that nothing was damaged

Such news deserves a triumphant headline, and I hope it will come

But so far the scientists and official spokesmen aren't getting the type of headlines that were given to damaging reports That's a shame

Good news is important news We must share it

And we thank and congratulate those who make an honest effort to spread the encouraging happenings of life



THE WILL OF GOD

Lesson for June 3, 1979

Background Scripture:
1 Samuel 13 – 16
Devotional Reading:
Psalms 40 4-8

There is a compelling temptation to skip the sharp edges of this story about Saul and Samuel It would be easy to focus upon Saul's disobedience and greed Many people will study this passage and easily ignore its sharp cutting edge that ought to prick the conscience of every person who acknowledges Jesus Christ as Lord and Master the writer of 1 Samuel believes that Saul is rejected by God because he has failed to obey the command to slay every Amalekite – man, woman, child, oxen and sheep!

"Destroy The Sinners"

Of course, Saul was disobedient to God, as Samuel saw it But isn't there something in this story more troubling than Saul's disobedience? Saul is rejected as king because he failed to do an act which each of us, following our Christian conscience, would regard as nothing less than sheer barbarity Samuel, the revered prophet of God, earnestly believed that it was God's will for Saul and his forces to wreak a holocaust upon the Amalekites because they were regarded as a sinful people "And the Lord sent you on a mission, and said, Go, utterly destroy the sinners, the Amalekites, and fight against them until they are consumed' ' (1 Sam 15 18)

This is not the only place in the Old Testament where we find God represented in a way that seems to quite justify a violent and vengeful course of action upon people judged as evil and sinful We tend to justify those bloodthristy commands because the victims are 'sinners," people who apparently do not merit mercy or compassion This is obvious even in the case of Saul who, although apparently repentent, does not receive forgiveness or reconciliation with Samuel Although he pleads, "Now therefore, I pray, pardon my sin, and return with me that I may worship the Lord," Samuel replies coldly, 'I will not return with you for you have rejected the word of the Lord, and the Lord has rejected you from being king over Israel" (15 25,26)

Beyond Bitterness?

No less evident is this malevolent spirit when Agag, the king of the Amalekites, is brought before Samuel We are told that Agag came to him cheerfully," saying 'Surely the bitterness of death is past " But Samuel replied

As your sword has made women childless, so shall your mother be childless among women " And Samuel hewed Agag in pieces before the Lord in Gilgal" (15.32,33)

The history of Christianity is full of such scenes the inquisition, the crusades, and pogroms against the Jews, to mention only a few

Destroy the sinners" is a cry that has been frequent on the lips of Christians Yet, we seldom stop to question whether the Father of Jesus Christ could ever have given those commands, whether such passages could ever fit into the New Testament, and whether such barbarity could ever represent the will of God

NOW IS THE TIME

By Max Smith, Lancaster County Agricultural Agent
Phone 394-6851

TO BE ALERT FOR LEAF HOPPERS

Weather conditions have not been very good for harvesting the first cutting of hay; however, by the time this article is in the mail we hope that many more acres will be harvested, the local alfalfa is ready to cut in relation to stage of maturity One of the most serious pests to bother alfalfa growers in this part of the country is the potato leaf hopper This insect attacks the second growth and makes it turn yellow and become stunted The treatment is to spray when the new growth is 3 to 6 inches high. This should be done as a preventative measure, do not wait until you see yellow alfalfa and then spray, it will be too late Sweeps over the young growth should detect the leaf hoppers, if they are present, then the crops should be sprayed Refer to the 1979 Agronomy Guide for rates and materials

TO PROTECT CORN CROP

With the growing practice of no-till corn growing we can expect more corn insects to be wanting their share of the crop This is more true during wet weather than dry weather Cutworms are working on all small plants Corn stalk borers have been found in small plants In addition, we usually have some trouble with army worms eating corn as well as small grains Growers are urged to check their fields several times each week in order to keep on top of the insect infestation Pesticide dealers and Extension Agents can give suggestions relative to materials to use Unfortunately, some of the more effective insecticides on these insects have been removed from the market Sevin, Diazinon, or Guthion may be used to keep down the infestation

TO BEWARE OF WOOD TICKS

Reports indicate wood ticks to be quite common this spring These are usually found on bushes and trees near wooded areas They are dangerous from the standpoint they may be carrying the Rocky Mountain Fever infection Parents are urged to inspect their youngsters after being to picnics, hikes, or in wooded areas They often attack a person around the head at the hair line Pets are also often infected with the wood ticks Sevin and Diazinon can be sprayed on trails, picnic areas, and on the grass in recreational areas The dust of Sevin or Rotenone can be used to treat pets carrying the wood ticks

TO PLANT TEMPORARY FORAGE CROPS

Livestock and dairy farmers who are short of summer forages might consider the planting of either Sudangrass or one of the Sudangrass-Sorghum hybrids These hot-weather crops will grow rapidly and be ready to graze or green-chop in 6 to 8 weeks They have the ability to grow well during extremely hot, dry weather One word of caution – in the fall after a killing frost, both of these crops should be handled very carefully, they may contain harmful amounts of prussic acid and poison livestock However, during the summer they are very productive

This dairy farm, near Churchtown, sits peacefully during it's day of rest.

Lancaster Farming photo by Joan Liesau.

Figure it for yourself.

You keep milk production up and feed costs down with our dairy pre-mixes.

Wouldn't you like to put some of that money you spend on commercial protein supplements in your own pocket?

That's the goal behind an alfalfa, grain and Vigortone Dairy Pre-Mix feeding program. It helps you take maximum advantage of the protein and energy already in your home-grown feedstuffs.

And legume roughage is a good source of protein; but it's low in phosphorus and other nutrients so important to the needs of all dairy cows.

That's where Vigortone Dairy Pre-Mixes help. These potent pre-mixes are specially formulated for the feeds grown on your farm and contain the proper amount of phosphorus to balance the calcium content of your legume roughages

Vigortone Dairy Pre-Mixes also furnish the minerals, vitamins and other nutrients so important to good nutrition and better milk production. Special ingredients promote proper digestion and assimilation of rations, so your cows benefit more from less feed.

Your Vigortone Dealer can help you figure the energy and protein supplied by your own grain and roughage. You'll know from the start how much, if any, additional protein you'll need.

Now is the time to compare.
See your Vigortone Dealer soon. He's ready to compare the performance of Vigortone's cost-saving dairy feeding programs with any other you name.

Roses need protection from black spot disease

NEWARK, Del. – Black spot disease is now making its annual appearance on roses which haven't been protected by spraying, warns University of Delaware Extension plant pathologist Bob Mulrooney

This disease is one of the most troublesome to afflict roses grown in Delaware. It's caused by a fungus which lives from year to year on dead fallen leaves and stems. Every Spring it produces spores which infect new foliage to start the destructive cycle all over again.

Symptoms of the disease appear as nearly round black spots on leaves of untreated rose plants. Spots vary in size but may get as large as a half inch in diameter. They have a fringed border and several may run together to form large irregular black areas on a single leaf. Usually infected leaves will turn yellow and drop prematurely. This leaf loss reduces the vigor of plants and makes them more subject to other diseases, drought, insects, and winter injury.

Sanitation is a very important part of controlling black spot, says Mulrooney Cut canes of diseased plants back as severely as possible, and rake and destroy all leaves at the end of the growing season.

Rose varieties vary greatly in their resistance. Control is most effective if a protective fungicide is applied before the condition appears or becomes established. (See the end of this article for recommended chemical controls for both black spot and powdery mildew.)

Powdery mildew is a fungus which first appears on young leaves as a grayish-white, powdery growth. Such leaves appear to have been dusted with talcum, and will become twisted and deformed. The disease later spreads to older leaves as well.

When severe, powdery mildew causes stunting and distortion of leaves, stems and buds. Buds may not open at all, and tops of canes are killed. The disease is usually more severe on succulent growth brought about by excessive use of nitrogen fertilizer, cautions the plant pathologist. Control depends on early, preventive treatment. As in the case of black spot, some rose varieties are more resistant to this disease than others.

To prevent black spot and powdery mildew from attacking your roses, spray plants with one of the following combinations of chemicals:

1 1/2 tablespoons of maneb plus 1/2 teaspoon of dinocap in a gallon of water; or

1 1/2 tablespoons of folpet per gallon of water; or

1 1/2 tablespoons of chlorothalonil plus 1/2 teaspoon of dinocap per gallon of water.

Start spraying any of the above combinations at budbreak and repeat at seven- to 10-day intervals until frost, recommends Mulrooney.

It is also possible to treat at 10- to 14-day intevals with a combination of 1 1/2 teaspoons of benomyl in combination with 1 1/2 tablespoons of either folpet, chlorothalonil, or Fore (zinc ion maneb) mixed in a gallon of water.

For best results, shorten the intervals between sprays during rainy or humid weather. Ideally sprays should have been started in mid-May, but your roses will still benefit from treatment if you start right now.

Steinman Farm wins forestry award

LANCASTER - The 835-acre Steinman Farm in Drumore Township has been selected as Lancaster County's winner of the Maurice K. Goddard Forestry Award.

The farm will be entered in regional judinging in June and, if it wins there, will be sent to the state contest this Summer.

Steinman Farm manager Frank Parmer said 117 acres are being tilled, and 625 acres are wooded.

Tom Johnston, administrator of the Lancaster County Conservation District reported that the farm has one of the largest wooded areas on private county farmland.

It was chosen, Johnston said, "because it had a forest management plan by a professional forester, and they followed it."

Johnston said John F. Steinman signed a cooperating agreement with LCCD during the late 1930s or early 1940s

The State Department of Environmental Resources Bureau of Forestry prepared the woodland management plan, which calls for maintaining logging trails, streams and brush for animal cover

Parmer said part of the maintenance includes timber cuttings of hardwood trees every 10 years

The Goddard award "recognizes people that manage their woodland for optimum yield and have a sustained harvest," Johnston said

Goddard is former director of the School of Forestry in The Pennsylvania State University's College of Agriculture, and he later served 23 years as state Secretary of Forests and Waters and DER director

Goddard held those positions in five administrations until January, when Gov Richard Thornburgh appointed Clifford Jones to the post.

State Grange sewing winner announced

HARRISBURG - The winner of the Best of Show in the 1979 Pennsylvania State Grange Sewing Contest was Mrs Sharon Cox, West Alexander R2, Washington County

Her garment was first in the field of 95 garments at the state level There were 1451 entries in the state wide competiton

This year's contest was not the first time Mrs Cox entered and won. Last year, she won first place in Class C with a leisure sute she made for her young son This year, Mrs Cox's winning entry was a dress made for her young daughter Mrs Cox is a homemaker, and has two children Her husband is a dairy farmer She is a member of Claysville Grange No 1510

The winner of the Class A competition, for adult garments, was won by Mrs Joyce Kifer, West Chester.

Julia Fulton, Cambridge Springs R2, won the Youth sewing competition Aged 13, Miss Fulton was a member of Cambridge Springs Junior Grange

Ellen Marie Huber, West Chester, won the Class F competition for Juniors Miss Huber is a member of Goshen Junior Grange No. 358, West Chester

A Berks County woman, Mrs Gloria Romig, Mertztown R1, won the tailoring competition. Mrs Romig is a member of Pioneer Grange No 1777

The blouse and skirt competition was won by Elizabeth Longenback, Northampton R1 Elizabeth is a member of Harmony Grange No 1692

Dairy goat show set

WEST MINSTER, Md – Late Spring is the beginning of the showing season for dairy goat owners The Maryland Dairy Goat Association is holding its annual Spring show on June 9 and 10

There will be four sanctioned shows on On Saturday, the 9th, buck and 4-H shows will be held Suncay, the 10th, there will be junior and senior doe shows

The shows will be held at the Ag Center, in Westminster, Md The judge will be Reverend Paul Ashbrook. This is one of the largest shows in the East, with 790 pre-registered last year, with an actual attendance of 700. The shows will start at 8 a.m. each day There will be food and refreshments available.

Horse breeder preparing to fight state tax laws

LITTLESTOWN -- Hanover: In trotter and pacer horse racing circles, it's a name that evokes respect, and almost reverence.

The lush green pastures of southern Adams County outlined with neat fences and dotted with tidy gold-colored farm buildings, are the nursery for the world's foremost Standardbred fillies and colts. Out of the Horatio Algier success story that is Hanover Shoe Farms, Inc., come legendary names in harness racing, names like Billy Direct, Super Bowl, Albatross, and "the greatest brood mare sire in history," 31-year-old still-in-stud Tar Heel.

Here are a few of the world's most famous and valuable brood mares and their offspring, seen at the Hanover Shoe Farms. According to John F. Simpson, head of the farm, with the Pa. tax laws the way they presently are, it is becoming harder and harder to financially run the farm.

Hanover Shoe Farms was formed in the early 1900's by area shoe magnates Harper D. Sheppard and Clinton N. Myers. It rose to world renown under Sheppard's son, Lawrence B., who one day during 1922 when he'd been left in charge, sold out the entire stable stock.

Under directions to reconstruct the breeding herd, young Sheppard gathered the finest horseflesh in the nation. In 1926, he shattered tradition with the $150,000 purchase of an entire 69-horse estate package. With the writing of that payment, Lawrence B. Sheppard also began rewriting harness racing records and the history of the sport.

Today, the reins of Hanover Shoe Farms, Inc., are firmly grasped in the solid, capable hands of president and general manager, John F. Simpson.

A third-generation South Carolina horseman with an instinct for racing and developing harness champions, Simpson was hand-picked by Sheppard, who had watched the young man make a name for himself setting racing records. In 1959, Simpson joined Hanover as general manager of both the racing and breeding units of the farm.

Under Simpson's leadership, Hanover-bred stock continues to run way out in the forefront of harness racing competition, although the Shoe Farm itself does not race animals. Last year's purse winnings from Hanover-sired entries outdistanced the closest competitor by over two million dollars.

But as the prized broodmares and their colts race across almost 4,000 acres of limestone grass in the Spring sunshine, clouds are looming on the horizon of the home of horse super-stars. Those storm fronts have moved over the racehorse breeding

Gasohol bandwagon keeps on rolling

By DIETER KRIEG

WASHINGTON, D.C. — There is a movement underway in the nation's capital which would change the federal farm program from one which pays to let land set idle, to one which encourages more planting. The idea behind the scheme is to use a portion of this country's farmland for the production of energy. Specifically, crops such as corn, barley, wheat, might be used for the production of alcohol and it in turn would be mixed with unleaded gasoline to make gasohol. Gasohol is said to be a cleaner-burning and more powerful fuel than ordinary gasoline. Aside from that, it will help to stretch the world's energy reserves, advocates say.

Much of the positive force that's being generated on behalf of gasohol is coming from an Iowa Congressman, Berkley Bedell, a member of the House Agriculture Committee His bill, H.R. 3905, would accomplish three things:

It would eliminate the feed grain set-aside and replace it with a flat $2.75 per bushel target price for corn.

Secondly, it would require that farmers agree to strict conservation practices and to sell the government 10 per cent of their crop at market price in order to get deficiency payments. Such grain could only be used for gasohol production.

Third, it would guarantee loans to gasohol producers for plant construction and sell them the surplus grain at a cut rate, perhaps half the target price. According to a recent study, says Bedell, gasohol could be sold at near competitive prices at the pump at a profit if the gasohol is made from corn costing $1.25 per bushel.

Bedell introduced his original proposal (H.R. 2153) to the House on Feb. 15. H.R. 3905 is essentially the same bill with minor modifications. Bedell says the new bill "simply makes a few refinements and improvements." H.R. 3905, introduced to Congress on May 3, had 32 co-sponsors as of May 31.

Representing a strong agricultural district in northwest Iowa, Bedell believes his proposals would help farmers and all of society. He points out that fuels are in short supply and farmers in the Midwest are particularly worried about the availability of Diesel fuel

The Iowan defends his bill with the following words.

"Instead of the federal government being forced to maintain huge stores of various commodities that in many cases are in danger of spoiling and in all cases constitute substantial storage costs, it can release these stocks in an orderly fashion to plants as they come on line to be transformed into a very valuable product - alcohol for use as fuel."

David Hallberg, an assistnt to Congressman Bedell, and well-versed on gasohol and agricultural matters, says the government is currently spending $1.6 billion per year for farm set-aside programs. He points out that the money is spent without anything productive resulting from it "With gasohol it would be productive," he exclaimed

Support for the gasohol program is coming from all over the nation, although it's more concentrated in the Corn Belt Farm organizations are not rapid with their support, said Hallberg, but they are cautiously supportive A lot of questions are being asked, he admitted.

Bedell, in his testimony before Congress on May 15, claimed ' private industry is just waiting in the wings to become involved in the alcohol fuels business But the first requisite is an explicit demonstration by the government that it is willing to provide the industry with some semblance of support and security for a reasonable period of time."

Bedell insists his proposal is not just another way of supporting grain prices.

Questioned on whether or not H R 3905 would increase the federal government's involvement in the agricultural sector, Bedell answered negatively

"On the contrary the proposal would set the stage for almost total government disengagement from the current price support system," he explained

Bedell calculates that his program would, on paper at least, allow for the production of 1 875 billion gallons of ethyl alcohol (derived from 750 million bushels of corn at a rate of 2 5 gallons per bushel). For comparisons, he says one barrel of imported crude oil contains 42 gallons, but only 20 gallons of gasoline can be refined out of each barrel of crude "Therefore it can be argued that 1.875 billion gallons of ethanol could displace over $1.3 billion of crude (with crude valued at $14 50 per barrel.)"

Bedell's legislation goes beyond the singular use of corn as a source for the alcohol needed to make gasohol

A mechanism is provided to use any agricultural commodity over which the U.S. Department of Agriculture Secretary has control. Sugar and wheat stocks, for example, could be used, Bedell assured.

On the question of the possible conflict between crops for food and feed, and crops for fuel, Bedell explained he sees no conflict (See story on page 126).

Bedell's bill has some opposition, but overall, his camp is optimistic. At the same congressional hearing at which Bedell testified on May 15, Deputy Secretary of Agriculture Jim Williams promised that USDA will take action to help make land and feedstocks available to support fuel alcohol production "But," he said, "it is important to make sure in considering ways to develop gasohol that we do not make changes in agricultural policy that might prove counterproductive to farm producers or other segments of the economy "

New inheritance law in effect

UNIVERSITY PARK – A spouse's rights to certain property at the death of a husband or wife has been changed under Act 23 of 1978, says Greta C. Vairo, Extension home economist with the Penn State Extension Service. The new law applies only if there is a partial will or no will, and it does not affect jointly owned property which passes to the surviving spouse. Amendments state: *A surviving spouse receives the first $20,000 plus half of the balance of the estate.

*Children or parents of the deceased person if there are no children receive the other half.

*The entire estate goes to the surviving spouse if there are no children or parents.

*If the decedent had children from a previous marriage, they are allowed to share in the estate with children of a later marriage. This provision applies when there is no will.

Before passage of Act 23, the bulk of the estate–when there was no will–passed to the children, often making the surviving spouse financially dependent. Formerly, the decedent's brothers and sisters and other relatives could be allocated a portion of the estate if the person died intestate (without a will). Under the old inheritance laws in Pennsylvania, decedent's children from a previous marriage were not allowed to share in the estate unless a will provided for them.

EMT grain case not settled

ANNAPOLIS, Md. — The Maryland Attorney General's office has decided that an alleged fraud case involving a grain buying firm in Baltmore and farmers in several states, including Pennsylvania, does not fall within the jurisdiction of Maryland's Consumer Protection Act. The reason is that the farmers involved were sellers, not buyers

The grain buying firm, EMT, had solicited shipments of grain from farmers and allegedly failed to pay for all the grain that was bought.

The Maryland Attorney General advises that the farmers involved may take action through civil lawsuits or by contacting the Maryland State Attorney's offices. Legal action might then be taken to determine whether or not criminal fraud was involved in the EMT case.

GET MORE OUT OF WHAT YOU GROW WITH FERTRELL NUTRI-SIL

Dry matter losses of field cured hay range from 17-33%. In a year, that's 1-2 tons of hay per acre. Nutri-Sil gives you an edge on the weather to make good feed better.

BENEFITS WITH NUTRI-SIL
1) Reduces field and storage losses
2) Reduces heat damage
3) Cuts energy losses in half
4) Improves digestability and palatability
5) Cuts run-off losses by nearly ⅔
6) Controls fermentation in 7-10 days

University Tests Show Value of Inoculation

Item	Percent preserved in — Inoculated	Untreated
Dry matter	85%	71%
Protein	94	71
Crude Fiber	83	82
Nitrogen free extract	80	67
Energy	88	75

Professor M E McCullough who conducted the research, estimated that inoculation added from $3 to $5 to the value of each ton put into the silo This came from reduced dry matter loss and extra feeding value equal to 1 to 1½ bushels of corn per ton of silage

Fertrell NUTRI-SIL

Forage Inoculant
A probiotic culture.
Safe, Non-toxic, and
Easy to Use.

"Leaders in Animal Nutrition"

Horse breeder

(Continued from Page 15)

industry from the Capitol building in Harrisburg.

Taxes and the operation of the purse funds of the Pennsylvania Harness Racing Association are behind the cause of the mounting turbulence.

State tax laws in Pennsylvania grant agriculture operations exemptions from the sales tax levy on production inputs, like fertilizer, equipment, feeds.

But, a fine-line legal interpretation of that sales tax law has barred operations like the Hanover horse breeding stables from the benefit of that exemption. Hanover, and other similar breeding farms, are angry over what they feel is an unjust and discriminatory sales tax interpretation. While they tolerated the situation for some time, now they've begun to fight

"We're agriculture, we belong to farmer associations," emphasizes John Simpson. "Our business is with horses, pasture, grass, feed We are an animal breeding and marketing organization"

Because Pennsylvania laws consistently refuse to recognize them as an ag-production business, Hanover pays a six per cent sales tax on everything hay, straw, oats, semen, machinery, fuels, even materials to fix the barns

State-related disagreements, however, don't stop at the tax bureau There's also the problem of low purses (money winnings) in a racing category known as the "sire stakes."

"Sire stakes" are race categories open only to the offspring of sires standing in service in the state operating a track. Pennsylvania sire stakes, for example, are open only to competing horses bred by sires standing in stud right here in the state.

Each state divides up differently the funds it receives from "breakage," a small amount of the money not paid back to bettors who win in pari-mutuel wagering. Some of the funds are used for various state projects, while other monies are plowed back into racing purses.

Racing in Pennsylvania is managed under the jurisdiction of the Pennsylvania Harness Racing Commission. In 1977, over 13 million dollars of the pari-mutuel breakage funds were dispursed from the Commission to various state departments The Philadelphia School District got over 4.5 million, the Department of Commerce claimed almost two million for assorted projects and the state's General Fund received a share of over 6.5 million, earmarked toward projects like water, sewer and access road facilities in boroughs and townships with populations of less than 12,000.

Therefore, most of the Pennsylvania funds go into various types of government funding - very little goes back to the racing competitors, notes Simpson. In states like New York and New Jersey, though, a large portion of that breakage is turned back into purse money to be paid to race winners, especially in the sire stakes categories.

So, Pennsylvania horse breeders are losing growing amounts of business in service fees, and in breeding stock sales. Customers are instead turning to neighboring states who offer more potential winnings to home-sired offspring.

At Hanover, the problem is turning into a genuine economic concern for John Simpson Like all economic battles, the war will ultimately be waged on the battleground of the checkbook.

In an attempt to outflank the enemy of tax disparity and low purse returns, whispers of moving float through the ranks at Hanover Shoe Farms.

"Never before have we sent so many mares out of state to be serviced," ponders Simpson. "There are altogether 87 mares standing in four other states and Canada, making their offspring eligible for higher-stakes competition than right here at home."

"Now, you know what that means?" he queries. "That means less horses stabled here, with less hay, less straw, less grain, less locally-purchased inputs to be bought."

Hanover currently employs 85 men. A cutback in the present horse population of 1391 head means less work, lost jobs, less taxes paid, less money all-around to be spread throughout the entire local business community.

"With the finest group of horses in the world here at Hanover," says Simpson, we help stimulate the export trade for the state. It not only helps the national balance of trade, but it helps boost the Pennsylvania economy."

No one at Hanover even wants to think about leaving Adams County and Pennsylvania with it's rich soil and an environment that's nurtured the harness racing greats. But if the tax battle is lost, for John Simpson and others, it may be the only path of retreat

Uses for Roundup herbicide expanded

ST. LOUIS, Mo. – Monsanto Company has received Environmental Protection Agency registration acceptance expanding the use of Roundup herbicide. The new uses include:

-Spot treatment in corn, soybeans, wheat, oats, barley, grain sorghum, and cotton. Either hand-held or boom equipment may be used.

-Applications after last harvesting of asparagus up until one week prior to emergence.

-For sugarcane, Roundup may be applied prior to planting, to remove last stubble or ratoon cane, and as a spot treatment in growing cane to control weeds or diseased cane.

-For all labeled tank mixtures used on minimum tillage corn and soybeans, one quart of Roundup may be used when annual weeds are less than six inches tall. The minimum rate previously labeled was 1.5 quarts regardless of weed size.

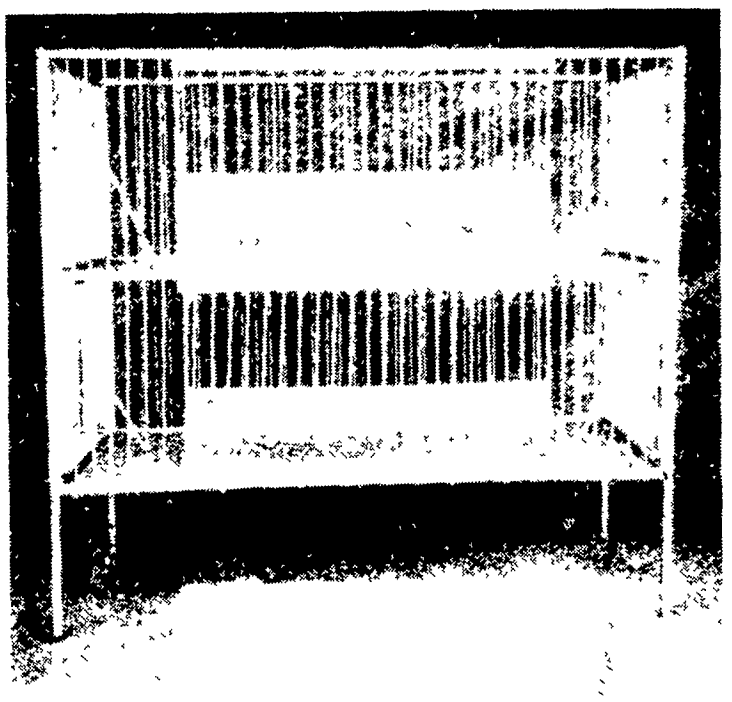
Roundup is a foliar-applied, non-selective herbicide sprayed when weeds have reached a vigorous stage of growth. When applied directly to foliage, it translocates throughout the plant, destroying above and below-ground plant tissues, including the reproductive root system of perennial weeds. Application rates and timing will vary according to the weed species being treated.

Many emerged nuisance weeds such as Bermudagrass, Bindweed, and Rhizome Johnsongrass can be controlled with one application of Roundup where several herbicides and frequent treatments may have been needed before.

Since Roundup will not control seeds or unemerged weeds, the use of a label approved seedling weed control herbicide or other seedling control measures are recommended by Monsanto to help prevent the re-establishment of annual and perennial weeds from seed.

TRI-COUNTY SWINE SYSTEMS INTRODUCES ...

"THE COMFORT CAGE"



FEATURING:

★ A UNIQUE SIZE - 3' x 6' —
- Shallow depth for maximum visibility of each pig.
- Extra length for increased floor area.
- Designed for simplified series assembly.
- Single - Double & Triple Deck.

★ GALVANIZED WOVENWIRE FLOORING —
- Outstanding Durability
- Minimizes injuries and abrasions
- Sanitary

★ THE NEWEST TROUGH DESIGN —
- Once-a-day filling means fresh feed regularly.
- Low profile affords maximum visibility and ease of filling.

★ WIDE CAGE GATE —
- Removes simply and quickly for easy access to each pig.

★ SIMPLICITY OF DESIGN —
- For easy assembly and installation.

Ultra-short cut silage cuts butterfat test

NEW HOLLAND — Chopping silage or haylage too fine wastes tractor fuel, hurts butterfat production and reduces forage harvester capacity.

The combination of high-grain rations and finely chopped silage can reduce your herd's butterfat test, says Sperry New Holland's Larry Fisher. He points out a ¼-inch length of cut seems optimum in silage particle size to help maintain the test and avoid spoiled silage due to poor packing in the silo.

Citing Wisconsin research, Fisher notes silage chopped to less than ¼-inch particle size lowers fat test but tends to put more body weight on cows. Apparently, it's partly related to the way a cow eats

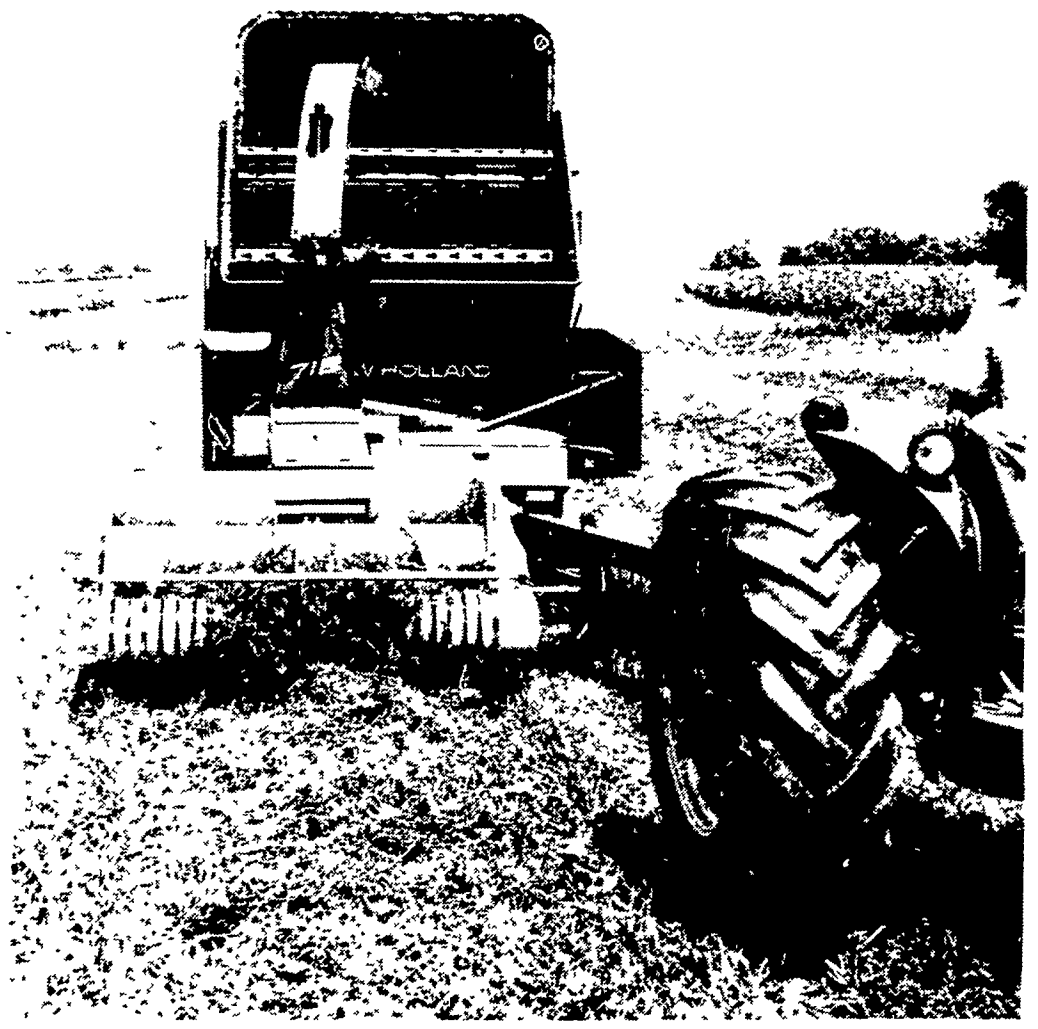
Cows tend to gulp down their food because they're ruminants They chew the food later, as cud, till the particle size is small enough to pass on through the digestive system. When you chop silage too fine you do their chewing work for them. Cows spend hours less time chewing their cud when they're fed finely chopped silage.

With the reduced chewing time, there's less saliva mixed with the food. Since the cow's saliva has a high sodium bicarb content, the reduced chewing activity means the contents of the digestive tract will be more acid and there s a difference in the balance of the kinds of acids produced in the digestion, too. Scientists think this accounts for the drop in butterfat production when the feed is cut too fine.

Fisher, who is product manager for forage harvesters at New Holland. suggests this seems to show some advantage for finely chopped silage for beef cattle where you want to put on weight as quickly as possible.

Dairy cows, on the other hand, should probably get at least some long hay in addition to silage. In the silo, very coarsely chopped silage doesn't pack as well so spoilage may be encountered The medium-chop avoids the problem in storage as well as in milk production and saves horsepower, too That means an economy in expensive fuel.

Today's high producing dairy cows will consume the equivalent of about six tons of dry forage in the form of hay or silage in addition to their grain and supplement to produce 17-18,000 pounds of milk, says Fisher. If a ton and a half of this total forage is in the form of dry hay, the other portion can be silage In the case of corn silage, this would work out to around 15 tons of silage on a wet basis. The silage is the key to getting the maximum amount of milk per acre of land in a low-labor, mechanized feed production system.



Chopping silage or haylage too short wastes fuel, reduces harvester capacity and lowers butterfat test. A quarter-inch length of cut is about optimum, according to Sperry New Holland.

At one time, the word "nice" meant wanton

PASTURE NUTRIENT BALANCER

As you know good pasture provides an excellent source of protein during the spring and summer months In fact, lush green pasture may be as rich in protein, on a dry basis, as corn gluten feed or brewers' dried grain Occasionally, some persons become so enthusiastic about the nutritive merits of pasture that they conclude it is fully the equivalent of a protein-rich concentrate This is a considerable exaggeration

In two important respects the best of pasture differs decidedly from a high-grade concentrate ration This is in the percentage of fiber (fiber is undigestable and has no feed value) and consequently in the TDN or net energy. Lush pasture will usually contain 18 to 20 percent fiber compared to approximately two percent fiber in ground corn (when both are dried to the same dry matter content.)[1] Since it is impossible to balance rations for grazing animals, energy, vitamins and minerals should always be made available To insure that the animals nutrient requirements are met during these upcoming months, we recommend that you consider MOPRO 16% Liquid Protein fed free choice

MOPRO 16% Liquid Protein is a High Energy Feed which has been specifically designed to economically carry more cattle per acre while increasing gains on pasture without grain Our stable guaranteed vitamin and mineral package has proven helpful in the prevention of pinkeye, thrush, and ringworm while improving general herd health and conception rates Good pasture along with MOPRO 16% Liquid Protein supplies the most economical feeding program for grazing animals during the growing season

TRW supports NTPA

UPPER SANDUSKY Ohio - The TRW Replacement Division of TRW Inc , Cleveland, Ohio will be supporting pullers on the National Tractor Pullers Association's (NTPA) Grand National Circuit using TRW pistons, piston rings and/or engine bearings, and sponsorship of an electronic scoreboard at most NTPA sanctioned events.

The TRW Contingency Program will cover all NTPA competition divisions - super stock, modified, mini tractors and four wheel drive trucks.

Additionally, TRW will supply the top three pullers in each Grand National Circuit class with merchandise certificates, in addition to supplying the winner of the "Truck Puller of the Year" with a TRW floor model tool chest.

A major part of the TRW program will be sponsorship of a scoreboard which will keep pulling fans posted regarding the progress of the major NTPA events. The scoreboard will be portable, set on a trailer frame and be completely self-contained, including a generator to drive the electronic equipment. The scoreboard will debut in early June.

TRW has had a long, successful history of supplying high quality parts for a variety of motorsports, and the TRW pulling program is to promote the company name in the agricultural sector, a major TRW Replacement Division market.

Pest management information available

NEWARK, Del. -- Delaware farmers interested in receiving information that will help them control insect and disease problems on their crops over the present growing season can receive regular mailings of the 1979 "Integrated Pest Management Report."

This weekly report is published jointly by Extension specialists at the University of Delaware and the University of Maryland.

Among other things it includes the latest information from research on optimum timing of pesticide applications, alternative control techniques, and the levels of infestation different field crops can sustain before suffering a reduction in yield.

Alerts are also issued whenever outbreaks of a particular pest occur or are expected or occur.

The Integrated Pest Management Report is available free to anyone who requests it. It is funded by contributions from recipients. To be placed on the mailing list, contact county Extension offices in Newark, Dover or Georgetown, Delaware or contact Mark Graustein, Pest Management Specialist, University of Delaware, Newark, Del. 19711.

June is dairy month

Several hundred sheep grazed the lush fields of the new Mummau residence. The farm is located across from Route 283 at the Rheems exit.

Penrose Hallowell

Hallowell

(Continued from Page 1)

autopsy as quickly as possible.

"Samples of the liver, spleen and kidney of the cow from Clair Hoover's dairy farm were tested by the Department of Environmental Resources and proved to be negative," said Hallowell "All evidence leads us to believe that radiation was not the cause of the cow's death."

Hallowell added that a blood test showed normal levels of Thrombocyte, a cell that normally would be present in low level if exposed to radiation. Also the cell responsible for leukemia was not present in abnormal levels.

Hallowell said the cause of the animal's death was a severe infection in the uterus. He said the agricultural department made culture tests to identify the specifics of that infection. In addition, the cow showed evidence of jaundice and anemia both of which are believed to be related to the severe infection.

Hallowell released the results of tests conducted by independent veterinarian pathologists at the New Bolton Center of the University of Pennsylvania Veterinarian School, as well as the results of a farm survey conducted by the agricultural department within a five mile radius of the 3 Mile Island nuclear power plant.

Hallowell said "based on our studies plus those of independent pathologists at the University of Pennsylvania and the Pennsylvania State University, we can now conclusively state that Metritis (uterine infection) was the cause of the much publicized death of a cow on the Clair Hoover farm in Bainbridge.

Clair Hoover

The Pennsylvania Department of Agriculture is picking up the tab for the expenses incurred during the Hoover farm investigation. Secretary Hallowell explains that's because "we're in a learning experience." He said because there were some questions regarding the possibility of radiation contamination, and everyone was interested in finding out what, if any, effects could be found, the Department is willing to pay for the expenses involved. He expects complete results of the testing to be made available in the near future, and notes it is not easy to identify the specific bacteria or viruses that may be responsible for the illnesses found on the Hoover farm.

Meanwhile, the Hoover family and their employees have been tested and the reports were all negative. "Everything came out good, we are very happy," commented Mrs. Hoover in a telephone interview with **Lancaster Farming** Thursday afternoon.

Despite their difficulties with downed cattle, the dairy continues to operate. Milk is being shipped regularly and no quarantine is in effect. Health regulations are being stringently enforced and there is speculation that the conditions on the farm contributed to livestock problems.

Three cows have died on the farm, and a total of 13 calves were born dead. Six other cows have been sent off the farm for slaughter because of illness. The Hoovers are concerend their problems may have had something to do with the operation of the nuclear reactors on Three Mile Island. But there is no evidence to prove such suspicions.

"Radiation is not the cause of the current problem on the Hoover farm based on blood studies, postmortem lesions, radiological evaluations and histopathological studies on the tissues" he said.

Hallowell said that pathologists at the University of Pennsylvania "have concurred with all of the findings reported May 24 by the department's Summerdale laboratory. They have stated categorically that the health problems on the Hoover farm are not related to any radiation-linked damage."

The report of tests on blood samples of cows from the Hoover farm show no signs of anything out of the normal range. "Every cow on the farm is normal in their blood profiles which measure mineral, protein, and enzyme levels," he said. "There is no sign of radiation poisoning on the farm."

Additional diagnostic service provided by the New Bolton Center at Hallowell's request, indicated that several cows on the Hoover farm are suffering from metritis and mastitis. The report of the pathologists includes recommendations aimed at correcting facilities to improve calfing conditions on the farm so that promotion of infection could be minimized. Also included in the report is a complete health history which indicates that only three cows, not seven as originally reported, have died on the Hoover farm.

On a related subject, Hallowell said that 100 farmers from within a five mile radius of the 3 Mile Island nuclear power plant have been surveyed by agents of the department. He said that 95 per cent showed no problems with their animals health while the remainder showed a few routine problems. The farmers themselves felt this might be attributed to unknown causes. Hallowell said that this was not above the average incidence of animal health problems on livestock farms.

He said he has directed the BAI's veterinarians to return to those farms which sited problems to determine the extent and where possible to suggest corrective measures in cooperation with the practicing veterinarians.

Horse club meets

LANCASTER – The Boots and Saddle 4-H Club held their meeting on May 11. Mr. Paul Hann of Ralson Purina Company discussed the horse's digestive system

The Boots and Saddle Club Show will be held on June 2

The next meeting will be on June 8, 7 30 p m. at Julie Hagstrom's

Milk given high rating

COLUMBIA, Mo. -- Despite rising prices, milk and milk products are still a good buy. And they're not the cholesterol culprits many people believe.

Ann Hertzler, University of Missouri-Columbia food and nutrition specialist, said milk is a good source of calcium, protein, riboflavin, vitamin A and vitamin D. "So, if you are trying to save pennies, make choices by comparing milk foods; not by cutting them out of the diet."

As for cholesterol, Hertzler pointed out that a cup of whole milk or an ounce of cheddar cheese has about 30 milligrams of cholesterol.

"This is fairly low even when compared with a restricted intake of 250 milligrams of cholesterol a day," she said.

"A cup of skim milk has about 5 milligrams of cholesterol; 2% or low fat milk has about 30 milligrams.

"So, it is possible to use milk and milk foods and still control cholesterol intake."

The specialist warned that babies should not be put on skim milk in order to lower calories or cholesterol. "Babies do need some source of fat in their diet," she said. Any form of cow's milk will need to be modified for the baby.

"Babies, if not breast fed, should be fed some kind of formula so that milks are balanced to meet their nutritional needs," she said.

"Babies fed only whole milk or skim milk will have problems. Evaporated milk formula is one example of how milk can be adapted for infant feeding."

Hertzler said that grownups as well as youngsters need some kind of milk or milk food every day, especially to provide needed calcium.

Md. ag week theme contest announced

ANNAPOLIS, Md. – The Maryland Agriculture Week Committee, in cooperation with the Maryland Farm Bureau, Maryland State Grange, FFA Chapters, 4-H Clubs, and other agriculturally oriented organizations, is searching for a theme for the 1980 Maryland Agriculture Week. This year, a contest is being held to select the theme to be used throughout the 1980 Calendar Year at all Maryland Agriculture Week Activities. The contest is open to anyone, with the winner to be the guest of the Maryland Agriculture Week Committee at the 1980 Agriculture Week Dinner.

The Maryland Agriculture Week Committee is composed of representatives of production agriculture and agri-business and works towards promoting a better understanding of Maryland Agriculture among the citizens of our State.

The official themes for the past three years are listed below:

1977-"Bee In The Know"

1978-"Maryland Agriculture-Something To Crow About"

1979-"Maryland-Land of Milk And Honey"

Themes submitted should be short, concise and of broad agricultural interest. Consideration will also be given to a theme's adaptability to illustration. An associated illustration may be submitted with a theme, however, this aspect of the contest is strictly optional.

Please submit your theme(s), with your name, address, and phone number, by August 1, 1979, to: Maryland Agriculture Week Theme, c/o Ernest C. Shea, Parole Plaza Office Building, Annapolis, Md. 21401.

The results of this contest will be announced in mid September. Please note that all themes submitted become the property of the Maryland Agriculture Week Committee and will not be returned.

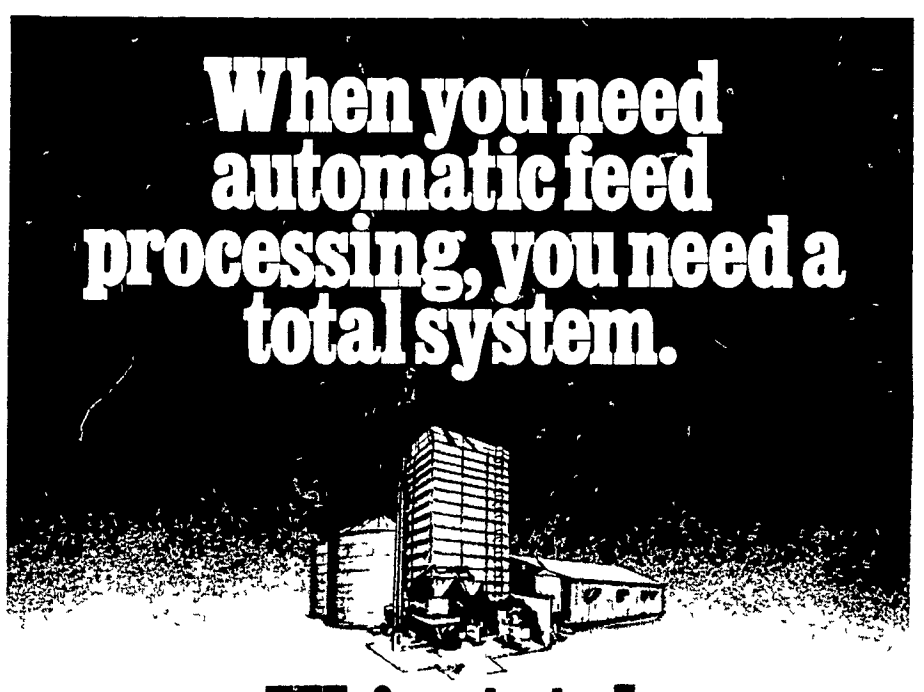
When you need automatic feed processing, you need a total system.



We're total.

A Mix-Mill Farm Feed Factory is the "TOTAL" system for automatic-feed-processing. It comes in a variety of capacities to meet your individual requirements. For example, our overhead grain holding bins range in sizes of 12 to 400 ton capacities Our automatic mixer/grinder is available in hammer mill or roller mill with 5, 7½, 10 or even 20 horsepower.

There's a wide range of optional equipment, too! Grain Bins, bulk tanks, bucket elevators, grain roasters, and auger systems, to name a few.

Your Mix-Mill Distributor is the place to go for automatic-feed-processings. Whether you make three (3) tons of feed a week or 400 tons or more everyday, there's a total Mix-Mill system just for you.

For more information on a total labor/cost savings system, use this coupon today!!

Nancy Wenger poses with the steer she showed to first place.

Wenger wins at DVC A-day

DOYLESTOWN - Nancy Wenger recently received several awards at Delaware Valley College of Science and Agriculture's annual A-Day

Nancy is the daughter of Mr. and Mrs Noah Wenger, Stevens R1. She is a Junior majoring in Animal Husbandry at Delaware Valley College, Doylestown.

A-Day is the annual college exposition of their livestock, horticulture, ornamental horticulture, and various other displays related to the college's function

In the Beef Cattle division, contestants were judged on fitting and showmanship Nancy placed first in her class for showmanship and went on to win Grand Champion Beef Showman.

The Grand Champion showmen for Beef, Swine, and Sheep, then competed together for Grand Champion Premier Showman of all three species Nancy won Reserve Champion in this event

Gasohol station opened

FAUQUIER COUNTY, Va — A gasohol station will be opened here soon at the Fauquier Grain Company, according to an article in the May 22 issue of **American Agriculture News**, published weekly in Iredell, Texas.

"We have a retail license and all we're waiting for now is assurance that we will be able to get the gasoline from our supplier," said Boots Ritchie, an active member of the American Agriculture Movement. The Fauquier Grain Company is the original AAM office in Virginia.

The word "perfume" means, literally, "from smoke."

CONTROL WEEDS IN ALFALFA WITH

BUTYRAC-200

Apply 2 to 4 weeks after alfalfa emerges. Controls broadleaf weeds in seedling or established legumes. This remarkable selective action — killing many broadleaf weeds without affecting certain broadleaf crops — has been proven by research men and commercial growers throughout the country.

Environmental neglect can be costly

EDITOR'S NOTE: The following article was submitted by Douglas M. Costle, administrator of the Environmental Protection Agency. He notes that "the current national debate over the cost and role of government regulation too often focuses only on immediate costs. But long term costs of failure to regulate can be even greater and more inflationary." His viewpoint follows:

By DOUGLAS M. COSTLE, Administrator
Env. Pr. Agency

Industry and government officials who complain about the inflationary cost of environmental protection should consider the inflationary cost of environmental neglect.

The Love Canal tragedy in Niagra Falls, N.Y. – to choose one of a dozen examples that might be cited – illustrates how skimping on modest investments now can force us into prodigious expenditures later. Originally intended to provide hydroelectric power for a "dream" community, the three-block-long Love Canal was converted to an industrial dumpsite in the 1920's. After 30 years of use, it was covered over by a chemical company and sold to the city for one dollar. As homes were built around the site, a school was built on top of it

Niagara Falls and New York State are still counting the costs of that one-dollar "bargain". Over the years, 82 chemicals – 11 of them suspected of causing cancer – percolated up through the soil

At first, the results appeared minor puddles of foul-smelling liquids formed, trees and garden-plants turned brown, children returned from play with skin-rashes Then, in the spring of 1978, an investigation by the New York State Health Department turned up a startling number of birth defects, miscarriages, and other abnormalities.

Had the proper government regulation been in force at the time, it would have cost a maximum of $2 million to build and seal a secure, hazardous-waste site. Because of the lack of such regulation, New York State – and its taxpayers – have so far spent $23 million to clean up Love Canal, and claims against the chemical company reportedly exceed $2 billion

Even these sums exclude costs we have no way of measuring: the life-long agony, for example, to a little girl with a cleft palate, an extra row of teeth, and slight mental retardation.

Last January, a trucker and his two sons were convicted of "midnight-dumping" PCB's along 200 miles of North Carolina roadside. Handling those wastes properly would have cost about $100,000. Now the state is seeking to dispose of these wastes safely at a cost that could go as high as $12 million.

Similarly, an investment of $200,000 at the Life Science Products plant in Hopewell, Va., would have made it safe for the production of Kepone. The owners' failure to make that investment led to the contamination of workers, the Hopewell water-treatment system, and the James River.

To date, judgments against the company responsible total $20 million, and EPA estimates that it would cost several billion to clean up Kepone from the James...if that can be done, ever.

Environmental protection is expensive. In 1977, we spent $37.5 billion for pollution-control – 48 cents a day for every man, woman, and child of us. Hence it is not surprising that environmental regulations should be attacked for increasing prices and forcing industry to divert capital from "productive" investments to pollution-control. The regulations are called inflationary.

But the inflation argument doesn't hold up: between now and 1986, pollution-controls will add no more than two-tenths of a percentage point to prices each year – the difference between paying $10 for something and $10.02. At the same time, jobs created by anti-pollution laws will reduce unemployment by two to three-tenths of a percentage point.

We should analyze every new environmental regulation with the same rigor we apply to other public investments, from submarines to school teachers to food stamps.

But we should also recognize that, by postponing prudent environmental investments today, we may force our children to clean up our garbage tomorrow – and at a much higher price. Our parents' generation could have prevented Love Canal for $2 million. Instead, our generation will pay more than $23 million.

That is inflation. Out of a misdirected sense of thrift, we can "save" ourselves broke.

By helping the 4-H and FFA, we're helping all of us.

In the Agri-Finance Department of National Central Bank we finance projects for active 4-H and FFA members

That's because we believe that helping to preserve the family farm is one of the best ways to insure a better future for us all And that involves working with our young people

It's important to give them guidance and help them acquire the skills they need to be successful farmers

Environmental monitoring program in effect around Three Mile Island

HARRISBURG – The Department of Environmental Resources said May 21 for the first time since the beginning of the accident at Three Mile Island, no radioactive iodine was being found in the air at the plant.

At the same time, DER Secretary Clifford L. Jones announced the details of the long term environmental monitoring program at Three Mile Island that will be coordinated by DER and conducted by several federal agencies.

The long term monitoring will be done by DER, the Environmental Protection Agency, the Food and Drug Administration, ıe Department of Energy and the Nuclear tegulatory Commission. Metropolitan Edison also will continue its routine and special monitoring.

"These various agencies will be monitoring a number of different potential exposure pathways including ambient gamma radiation, airborne particulates, airborne radioiodine, fresh milk and surface water," Jones said.

The ambient gamma radiation is being measured by devices called thermoluminescent dosimiters (TLD's), which have been placed in many locations in Dauphin and York counties.

The dosimiters are collected periodically and, when analyzed, tell how much radiation a person standing in the same place would have been exposed to.

"Over the past month or so, we haven't found any ambient gamma radiation above normal background levels," Jones said.

A number of continuous samplers have been located within seven miles of the plant to measure airborne particulates and radioiodines.

The ...plers are equipped with filters that collect particulates from the air and with charcoal, that absorbes iodine and other gases and vapors.

Fresh fluid milk is being sampled at farms and supermarkets Both cow's milk and goat's milk are being collected and analyzed for the presence of Iodine-131.

Some samples are collected daily; some are collected weekly Jones said. He said the tests continue to show no detectable iodine.

Jones said DER has detailed plans to monitor past and proposed discharges of radi active ma'erial into the Susquehanna River.

The company is developing plans to dispose of some 600,000 gallons of contaminated cooling water

Under one alternative being considered, the company would filter out most of the radiation from the water before discharging it into the Susquehanna. Small amounts of radioactive material would remain in the water.

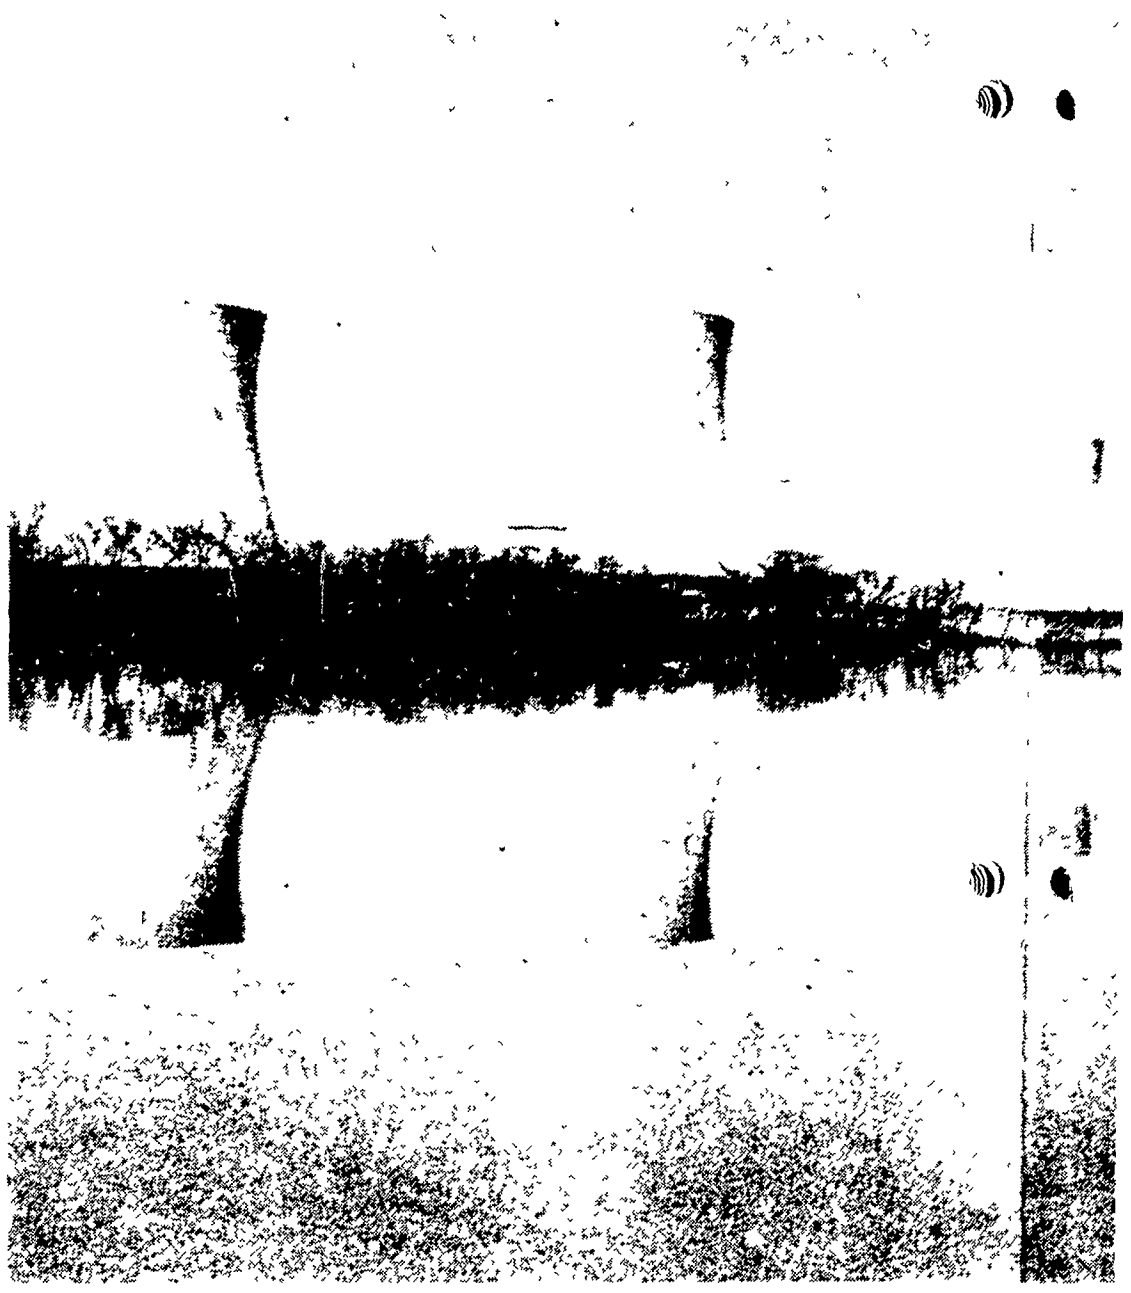
"We want to make sure the company and the Nuclear Regulatory Commission have considered all alternatives including not discharging into the river," Jones said.

"But if there is a discharge, we want to make sure that the company does everything possible to guard against accidental spills and to make sure the discharges are within safe levels."

Jones said DER has been given the right to review all of the company's plans, specifications and blueprints and that the department will insist that all precautions be taken.

"Although we have no legal responsibility

(Turn to Page 40)



Long-term monitoring of the air and water in the region of Three Mile Island is being conducted by the Pennsylvania Department of Environmental Resources and any

Professor of veterinary medicine assures that livestock is safe

By DIETER KRIEG

YORK — A professor of veterinary medicine who claims to be an opponent of nuclear energy told a group of York Countians last week that if radiation were responsible for livestock ailments, scientists would be able to find the evidence.

Nothing has been found to indicate that livestock (or anything else) was adversely affected as a result of radiation leaking from Three Mile Island two months ago, Dr. David Kornfeld assured. He is based at the School of Veterinary Medicine of the University of Pennsylvania.

Dr. David Kornfeld

Scientists would be able to find evidence of radiation-caused damage in blood cells, bone marrow, the gastrointestinal area, and cerebrovascular tissues, the veterinary scientist explained. Also, the animal's natural immunity system would have been affected. All our findings are coming up negative, he said, with reference to a case in Lancaster County where some suspicions have been raised about radioactivity causing severe illness and abortions in cattle.

Neither the laboratory at New Bolton Center, with which Kornfeld is affiliated, nor the laboratory at Summerdale, run by the Pennsylvania Department of Agriculture, have come up with any kind of trace information which would confirm that radiation had an ill effect on the area.

Noting that tests have been performed by various institutions on both the state and federal level, Kornfeld said: "One gets confidence when different agencies are working quite independently and get the same results." There is no doubt in his mind that all remains well in barns and fields around Three Mile Island.

The professor of veterinary medicine also reminded his audience of the constant presence of background radiation. Brazil, he noted, is showered with a constant average of six picocuries. Background radiation comes from the ground, atmosphere, and even within living bodies.

The two radioactive isotopes that were emitted from the crippled reactor on Three Mile Island were Xenon 133 and Iodine 131, Kornfeld said. The damaging alpha emitters were successfully held in the containment structure.

As far as the publicity of the TMI tragedy is concerned, Kornfeld said emphatically that "reports of 'contaminated milk' were a real disservice to the dairy industry."

Kornfeld says he believes the livestock ailments that have been reported on a couple of farms in southcentral Pennsylvania can be traced to nutrition and management deficiencies. Conclusive evidence has shown that previously reported problems were severe cases of septic metritis, pregnancy toxemia, and drastic calcium deficiencies.

Black light trap guards Delaware's crops

DORIS HENRIQUE
University of Delaware

NEWARK, Del. – Like silent sentinels of the space age, a network of black light traps keeps watch over some of the worst pests that threaten Delaware crops each Summer. (These traps are part of a larger system scattered out at five to 20 mile intervals across prime cropland from the lower end of the Delmarva peninsula up into New Jersey. This network serves as one of the first lines of defense against insects like the European corn borer – pests that can soon eat their way through a farmer's profits if not detected and controlled.

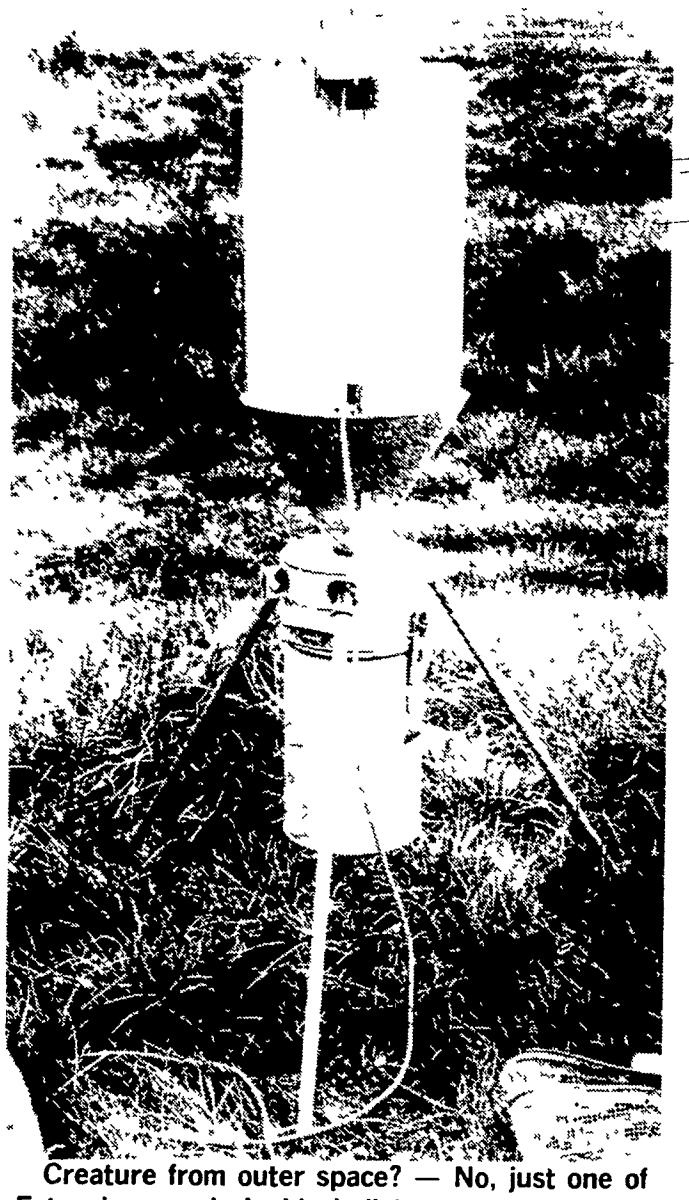
This marks the eighth year the monitoring system has been in operation, says University of Delaware Extension pest management specialist Mark Graustein. He's been involved with the regional program since it was launched back in 1972 by the Cooperative Extension Service. "We began using the light traps in Maryland and Delaware that year to monitor pest buildups on sweet peppers," he recalls. "But from the start a lot of crops besides peppers benefited, and the program has been growing ever since." It now serves farmers in four states: Delaware, Maryland, Virginia, and New Jersey.

"The black light trap does three things for us," says Graustein. "It enables us to detect and predict certain pest outbreaks; it helps us make decisions as to whether or not controls are needed; and it helps us make the proper decisions on the timing of controls."

It is a valuable tool in integrated pest management (IPM) – a system of pest control which has gained steadily in popularity over past few years. In addition to information on insect activity provided by the black light trap, IPM uses weather data and the observations of field scouts to determine whether or not natural controls will keep pest populations down without resorting to pesticides to protect a crop from economic injury.

Each trap has a small fluorescent black light tube which attracts night-flying insects, including egg-laying moths of the European corn borer, corn earworm, various armyworms and a number of other pests which feed on plants during their larval stage. Traps are located on land owned by volunteers who have agreed to empty them three times a week. Identification of insects collected is done at the University of Delaware's IPM office. Volunteers also take readings from weather stations located at trap sites. All this information is fed into the area-wide system to provide an accurate, up-to-date picture of the movements of crop pests.

By the number of moths found on any given night, it is possible to predict how much pressure can be expected in fields a few weeks later when larvae emerge and start feeding, provided conditions in the environment are favorable to their development. The lapse between the time eggs are laid and worms appear gives observers like Graustein time to evaluate the potential threat and alert growers as to whether or not chemical control measures will be necessary.



Creature from outer space? — No, just one of Extension service's black light traps that keep watch over Delaware field crops each Summer, as part of an area-wide pest control network.

The black light network has saved farmers money every year it's been in operation. On several occasions it has probably saved them from economic disaster.

Take, for example, the late season podworm outbreaks on soybeans, snap beans, sweet corn, peppers, and limas back in 1976 and 1977. It's hard to say just what the losses might have been since many growers were able to apply controls in time to prevent crop loss. But Graustein estimates that savings from these two alerts alone run into the millions of dollars.

And then there was last year's corn borer outbreak. Again, the traps helped observers pinpoint just when emergence of larvae would peak in field corn, making it possible for farmers to get maximum benefit from a single pesticide application. With corn going for only $2 a bushel at the time, they couldn't have afforded to spray twice.

All the black light traps in use in the Delaware part of the network belong to the Cooperative Extension Service. This year Graustein expects to have between 15 and 20 of these in use on farms around the state. But the specialist says there's no reason why individual farmers couldn't purchase their own traps and join the monitoring network. A unit costs about $175 and is very inexpensive to operate. And it would not be difficult to learn how to identify the specimens caught.

With certain pests the black light trap can pinpoint timing of controls very closely. Nightly catches of

Eastern

(Continued from Page 1)

plans with Leprino are on good terms which would provide Eastern with millions of dollars in years to come.

The class action suit faced by Eastern was brought on by 50 members and is specifically directed at 11 present members of the board of directors and four past directors Also included are former officers and Eastern's accounting firm. Charges include improper expense deductions by directors, falso cheese and butter accounts by directors, and overall mismanagement of the cooperative's marketing activities The plaintiffs are going as far back as 1973 to make their case

But according to Wagner and Tewksbury, the plaintiffs don't have a case at all. Allegedly, the 50 signers of the class action suit are representing Eastern's entire membership. To this Wagner says. "It's high time we let these 50 people know we don't want them to bring a class action suit to represent and protect us."

Wagner says Eastern has arranged for legal counseling on the matter and in their lawyers' opinion, the suit is groundless and is likely to be dismissed in court

Both Wagner and Tewksbury alluded to the possibility of a counter-suit. "We will charge the plaintiffs with the costs of the suit," he said, adding that resolutions have been passed to seek compensation for whatever losses Eastern's membership might incur as a result of the charges filed against them

Tewksbury, a dairy farmer from Meshoppen, Pa., said: "It doesn't take much to start a class action suit But can you prove it? And what about a countersuit?"He seemed to be directing his comments to those responsible for the possible legal hassle, although none of those people were in the room.

The members who are causing the ruckus are from District 9, which encompasses Orange, Delaware, Chemung, and Steuben Counties in New York State. According to Tewksbury and Wagner, part of their quarrel was brought on because of differences in opinion as to where Eastern should locate its cheese plant. "That had a lot to do with it," Wagner assured.

Much of the comments made at the officers' meeting were in response to an article that appeared recently in **Farm Journal.** "We welcome constructive criticism, but the article by Peter Hardin was filled with outright lies, half-truths and innuendos," said Wagner. Tewksbury said he studied the article and found 14 items that were absolutely wrong Eastern's general manager, Howard McDonald, marked 18 items wrong Tewksbury added.

'This kind of publicity isn't just bad for Eastern, it's bad for the entire dairy industry," he exclaimed

The 4-year president of Eastern believes all the hardships may lead to some good, however. Some members have left, but the most dedicated remain and that's what's needed to build a strong, aggressive organization "Our best plans are nothing without your support," he said

Eastern has two cheese plants in operation On a recent Saturday 1 6 million pounds of milk were sent through the two plants, Tewksbury said triumphantly The cooperative considers the two plants to be a tremendous benefit for handling large volumes of milk And when some marketing channels become blocked, the cheese plants are expected to provide an easy outlet. Wagner noted that the milk strike in New York City earlier this year did not harm Eastern significantly, and part of the reason was the cheese plant at Horse Heads, N.Y. It was especially important during the strike, about 2 million pounds of milk were handled there one weekend," he said. "Had the new plant at Waverly been in operation at the time, we could have taken advantage of the New York City milk strike," he continued The Waverly plant is now in partial use.

Tewksbury and Wagner assured the gathered officers that while Eastern is not without its share of problems, a strong determination exists to bring the cooperative into the forefront

A major reason cited by Tewksbury for the improved outlook is that all cooperatives in the Northeast are getting along better now than they had been. As an example, he cited the combined efforts of all the dairy cooperatives in Pennsylvania to establish a milk security fund. Eastern initiated a joint meeting with Pennsylvania legislators last Winter, to which all dairy co-ops and farm organizations were invited All attended. "Basically we have sat down and aired our differences," the cooperative president said.

Tewksbury stressed that he believes it is becoming increasingly important for farmers to work together because of their minority status. He again appealed for support from the membership and thanked those who showed it by being present at the Wednesday evening meeting.

Eastern looks forward to having improved months and years ahead. The cheese plants at Horse Heads and Waverly and the association with Leprino are considered to be a strong part of the program. Wagner exclaims: "I consider this a very profitable venture for our association."

Also marketing costs have decreased significantly since last year In March of 1978 there was a deduction of 49 cents per hundredweight for marketing, compared with 10 cents this year.

Wednesday evening's meeting was for officers in District 8, which is comprised of southeastern Pennsylvania and Delaware.

Eastern's annual meeting takes place in Syracuse, N.Y. next Tuesday and Wednesday.

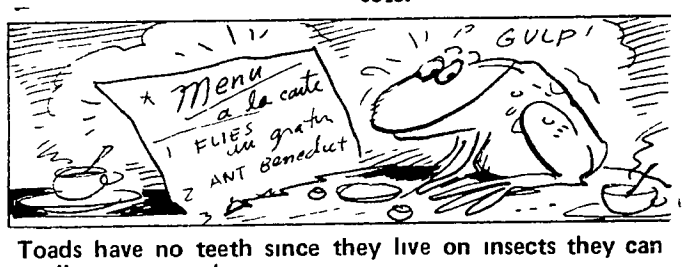
York County farmers offer reward

YORK — A group of farmers from the north and west areas of York County have poured their anger over several recent barn fires into a reward fund of more than $4,000

That amount, plus a finished Hereford steer, will go to anyone furnishing information leading to the arrest and conviction of persons responsible for a series of barn fires in the Emigsville - Mt. Wolf area of the county.

Residents and fire officials have noted an apparent pattern of Tuesday night fires, with two definitely pinpointed by Fire Marshall James Boyle as cases of arson.

Anyone with information on the barn fires is asked to call their nearest substation of the Pennsylvania State Police. The York County substation number is 717-767-6848.



Toads have no teeth since they live on insects they can swallow in one gulp.

Computer may aid in cleaning nation's waters

TUCSON, Ariz. – Farmers, ranchers and land use planning agencies may soon have an important computer "tool" that could help agriculture reduce its non-point-source pollution from agricultural land, the U.S. Department of Agriculture reports.

Non-point-source pollution is sediment, chemical fertilizer and pesticides coming off the land and ending up in the nation's lakes, rivers and streams.

The movement of water, fertilizers and pesticides through soil and the chemical reactions due to that movement are highly complex phenomena. Add to that climate, soil types, land slope, farming practices, radiation, rainfall and other criteria and there exist complexities to boggle the mind.

Those complexities must be understood, however, in order to assess what is currently happening on the land and then predict the effect of different farming practices to that farmers and land use groups can select the best management practices for each farm or watershed.

Without the aid of computers, implementing water quality programs would be an almost insurmountable task. Planners would have to monitor each water-shed or farm and prescribe corrective measures when pollution was judged to be excessive.

That solution may not be necessary, however, since USDA's Science and Education Administration-Agricultural Research has developed a computer program into which most of the complexities have been programmed.

Fifty of SEA-AR's top scientists, under the direction of Walter G. Knisel, Jr, Tucson, Ariz, have pooled hundreds of scientific man-years of research and experience into the program.

"All of the knowledge we now possess has gone into the computer program and it is being tested on a considerable number of research watersheds in 8 land resource regions," Dr. Knisel, a hydraulic engineer, says. A land resource region contains similar soils, climate and vegetation. There are about 20 such regions in this country.

Three main components are programmed into the computer:

Natural component -- precipitation as rain or snow, radiation (solar energy or sunlight), and temperature.

Management component – land use, cultural practices, plant nutrients and pesticides.

Physical component – geology, soil type and topography of the farm or watershed.

With that information, the computer should be able to assess pollution coming from a particular farm or watershed; determine the responses coming from the same area when a change in farming methods is suggested: and evaluate and suggest the best farming system that would reduce pollution.

To be practical, any computer model expected to be of use must be simple, physically based, and capable of simulating surface and subsurface water flow, deep percolation (seepage), erosion, sediment movement, and dissolved and absorbed chemical output from fields under different management or farming practices

When speaking of the computer program as being "simple", Dr. Knisel is quick to point out that it is meant to be simple to use by action agencies. The computer program or mathematical model itself is more than complicated.

Sediment is the nation's number one polluter. It has been estimated that at least three billion tons of soil are washed out of fields and pastures each year – enough soil to cover 21,000 80-acre farms to a depth of 1 foot.

Almost all water resource developments and the suitability of water for many uses are affected by sediment. Fertilizers, among other things, cause eutrofication or aging of the nation's waters. The over-enrichment promotes algal growth and depletes oxygen necessary for fish survival. Pesticides cause a number of problems

The reason for SEA-AR's effort is that agriculture has a responsibility to the Federal Water Pollution Control Act of 1972 That Act, amended in 1977 by the Clean Water Act and Resource Conservation Act, has a goal set by Congress "to restore and maintain chemical, physical, and biological integrity to the nation's waters." The deadline is 1985.

"The computer models under development for evaluating agricultural pollution should not be considered as complete nor an end in themselves. They are the first step towards the development of practical computer models useful to such groups as Soil Conservation Service specialists. These initial efforts will help identify areas in which reseach is needed. Then some well-planned data collection programs must be developed to provide for a sound water management program for resource conservation," Knisel concludes

Budweiser to sponsor pulling contest

ST LOUIS, Mo — The National Tractor Pullers Association, Inc. and Anheuser-Busch, Inc., St. Louis, Mo, have announced the "Budweiser Tractor Puling Points Fund", which marks the entry of the brewing giant into the sport of pulling.

The Budweiser program for 1979 will feature a $15,000 fund which will be distributed three ways to pullers.

The points fund will be aimed at three areas - the four Regional Circuits, the Grand National Circuit and a combined Regional/Grand National Circuit program.

The Budweiser program will be contested on the basis of the percentage of Total Available Points (%TAP) in various classes, with the winners receiving the highest percentage of points available to them in the weight class which reflects their best performance. Setting this program apart from the separate NTPA Points program is the fact that all pullers in both the Super Stock and Modified divisions and the four weight classes within those divisions will compete against one another.

The Budweiser program is the first time the sport of tractor pulling has had sponsorship of a points fund, other than the NTPA administrated program, which continues into its third year.

The Anheuser-Busch/Budweiser involvement in the sport of tractor pulling is recognition of the growth of the sport's popularity over the past few years.

Pa. red meat production down

HARRISBURG — Red meat production in Pennsylvania during April 1979 totaled 82.3 million pounds, down two per cent from a year earlier according to the Pennsylvania Crop Reporting Service.

Cattle slaughter at 60,000 head was down 21 per cent from a year ago and calf slaughter at 20,800 was down 30 per cent. Hog slaughter at 261,500 head was up 13 per cent and sheep and lamb slaughter at 16,500 was up 81 per cent.

Nationally, commercial red meat production in April 1979 totaled 2.88 billion pounds, down six per cent from April 1978. Beef production at 1.59 billion pounds was down 17 per cent. Veal production at 33 million pounds declined 34 per cent from a year ago. Pork production totaled 1.24 billion pounds, up 13 per cent from a year ago. Lamb and mutton production was unchanged at 25 million pounds.

Warm-Up to Northco
With Zone Heating
■ Efficient Gas Heating

★ **ECONOMY** - Northco Pig Brooders operate on just pennies a day because they use two small burners rather than one large gas eating burner Its operating cost is over 75% lower than that of heat lamps.

★ **SIMPLICITY** - One simple needle valve provides positive heat control. Burners can be easily removed for cleaning. Chain suspension allows simple, quick height adjustment for added temperature control.

★ **SAFETY** - Northco Pig Brooders can be safely used over straw or litter. There is no need to worry about pigs being cut by broken lamps or loss by bedding fire. It works with any ventilation system.

★ **Safe, Dependable "Zone Heating"**
Northco Pig Brooders are excellent for brooding little pigs because they provide "zone-heat". Ideal temperatures for little pigs may be 25 to 30 degrees warmer than needed for the sow. With "zone-heating" temperatures are directed only to the little pig area, while sows remain cooler. If more heat is needed in extremely cold weather the brooders can be raised to heat the entire house .. eliminating the need for furnaces or costly unit heaters.

John Wall (center in plaid shirt) demonstrates to the Cumberland County Sheep producers how his titling squeeze chute carousel works.

Wall's sheep operation is well equipped 'down under' style

By JOAN LIESAU

WAYNESBURG — The winding roads and rolling hills scattered with rocks reminds one of West Virgina, rather than southwestern Pennsylvania Commanding most of the road, a bus carrying Cumberland County sheep producers recently traveled those roads to visit the sheep operation of John Wall, Waynesburg, Greene County

Wall came to this country in 1969 from New Zealand Speaking with a pleasent accent from his native land, Wall declared "there is more opportunity in this country then any other country in the world."

Wall utilizes an environmentally controlled metal building for several hundred ewes. The alleyways are eight feet wide and can handle 40 lambing pens at a time. The lambing pens are also hinged so they can fold away easily. Wall has the building divided off into about 10 sections. Long feeders are used as a partition as well as for feeding

The flooring he uses is aluminum hog slats (complements of a Pittsburgh research project.) The slats cost $3 a square foot at the time of installation several years ago. The slat spacing is 3½ inches wide with ridges on the surface. Wall said that 3½ inches proved to be too wide in a confined sheep operation. Because of the ridged surface, manure tends to get trapped and lay on top of the slats Another problem with the flooring is the aluminum will corrode, forming deposits of white powder. All in all, Wall said "the sheep didn't look any worse on the wide slats then they would on loose galvanized flooring

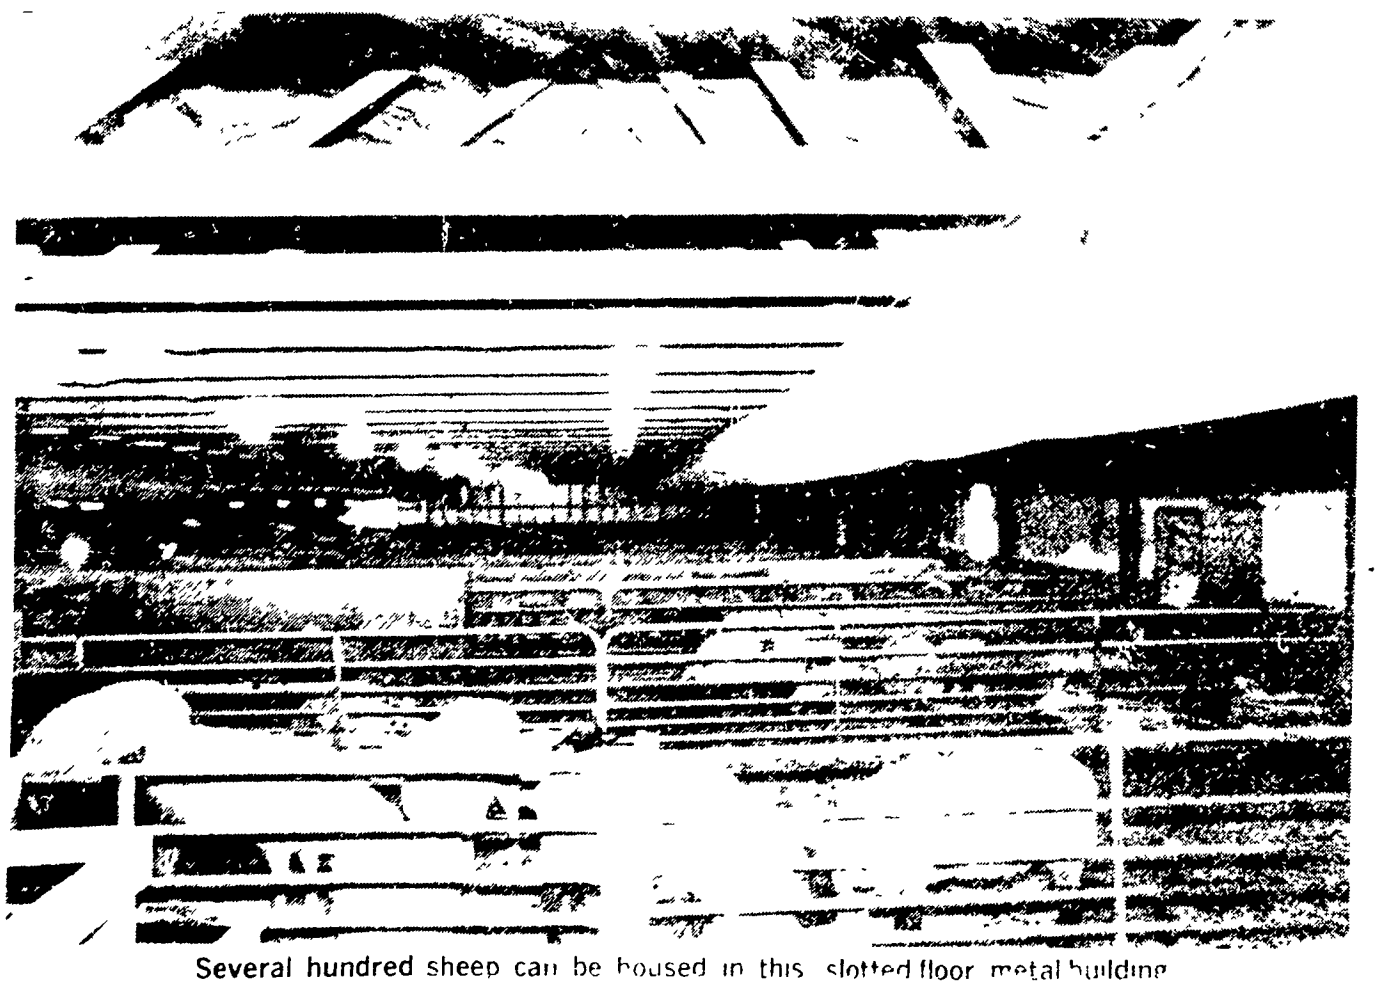
Another unique feature of the building is Wall's watering system. Different valves are set up so Wall can regulate medications through the water proportionately for each pen He also uses tube type ventilation which brings fresh air in the building from vents The tube system constantly mixes the fresh air with the stale air

Wall has over 200 acres on his farm which he uses to pasture his sheep Spring through Fall He fattens his lambs on turnips. When the turnips are mature, the lambs are put in the field. They eat the top off first and then dig down to the rounded root When his lambs have a good finish, Wall sells them through local auctions

Corn silage, fine chopped, is mainstay of Wall's sheep He said they eat about eight pounds a day. Wall grows his corn no-till and gets 18 tons of silage per acre He compacts the silage into his silo and tops the last two or three wagon loads with a silage preservative

Wall refuses to shear without proper facilities He thinks "the university people should use a style of shearing that shearers use when shearing 600 sheep in a nine hour day." Wall continued that in New Zealand, "professional sheep shearers want a spotlessly clean floor and won't touch the wool" after the sheep is sheared He himself shears on a clean concrete floor Referring to

(Turn to Page 32)



Several hundred sheep can be housed in this slotted floor metal building

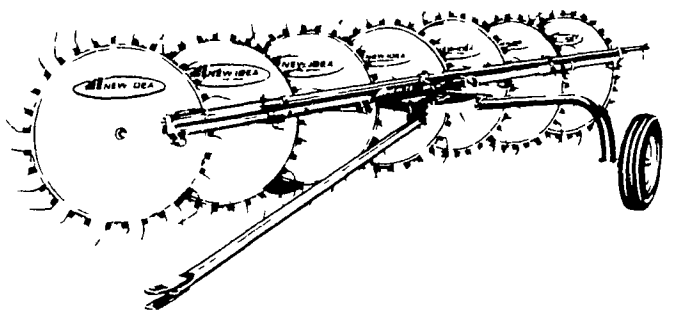
SPEED WHEEL RAKES . . .

built to last!



MODEL 404

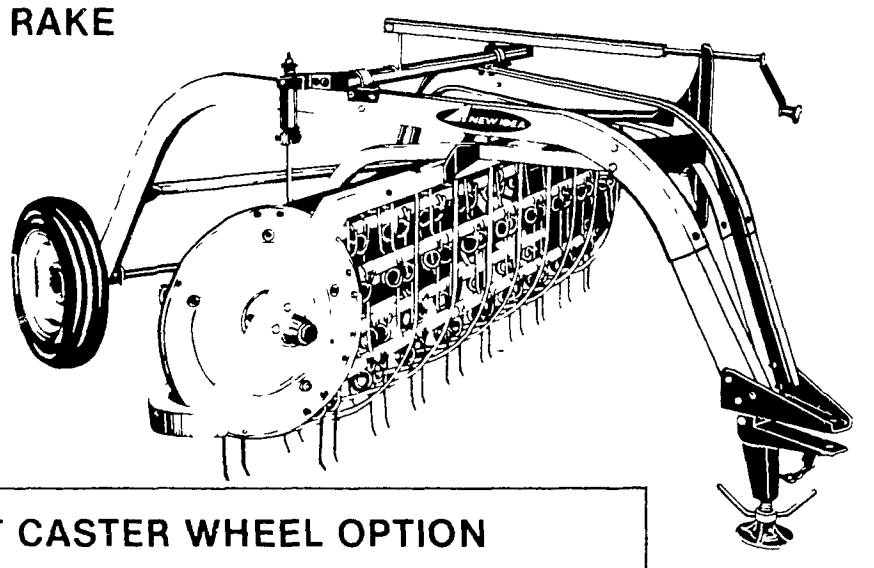
This low cost, speedy windrow builder is efficient and effective in any type of field. Rakes up to 11 feet in one pass by simply adding 1 or 2 raking wheels to the 5 standard rake wheels. Simple design minimizes maintainence and holds down costs!!

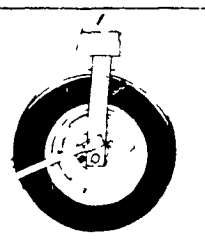
The independent, counterbalanced raking wheels follow irregular ground contour with ease for maximum, efficient raking

RAKE FAST! RAKE CLEAN!

NEW IDEA MODEL 402 BELT DRIVE RAKE

Get all the hay with five tooth bars that provide a smooth, lifting, rolling action that builds fluffy windrows at minimum cost You also get smooth quiet dependability big uniform windrows, and a minimum of leaf shattering The quality New Idea Belt Drive Rake the rake that saves you money





NEW FRONT CASTER WHEEL OPTION

Front wheel acts as a gauge wheel to follow any contour ground closely for a cleaner raking job. Permits easy hookup and use of longer tongue for tighter turns.

BIG CAPACITY, LONG REACH, HIGH PERFORMANCE!

NEW IDEA 177 FLIGHT ELEVATOR

Whatever you want to elevate, the Avco New Idea Flight Elevator can handle it ear corn, shelled corn, baled hay, beans, small grain or ensilage It's available in the length you need from 31 to 51 feet. Both the regular and long trucks feature a 96 inch wide tread for extra stability All sections are made of galvanized steel with steel angles at overlapping joints for extra strength Choose from PTO, gas or electric motor drive. It's the flight elevator designed for big capacity.

Wall's sheep

(Continued from Page 30)

burrs and contaminents in the fleece, Wall stated that "in New Zealand, sometimes they would just reject the fleece." Wall utilizes a catching pen with a spring loaded gate. This way, he explained, "the wooled ones can't get out, but the sheared ones can get back in."

One of the impressive features of Wall's operation was his chute system. "It is equally important with sheep to have some type of handling facility," Wall remarked. The chute consists of 35 odd gates, all permanent. A 300 gallon water tank (from a milking parlor) filled with tapped spring water is used as a circular type shower. As the sheep walk out of the shower, they stand in a drainage pen. The dip then drains into a sump. Wall [illegible] like to dip after [illegible] in.

A foot bath is also under the roof of Wall's facility. He runs his sheep through four times. He explained that this is equivalent to stand in the bath for two and one-half minutes. Wall recommended a "good substantial metal lid" over the bath when not in use.

It was his idea to put three tilting, squeeze chutes in a carousel fashion. The chutes, made of 3/4 inch galvanized pipe from Oregon State University plans, all connect and rotate on wheels on top of a concrete base. Wall said he would like to move the tilting chutes out about four inches so the sheep could go out the center rather than walking out backwards. The sheep enter the production line from a cutting gate. Wall and a helper can trim the feet of 280 ewes in one afternoon. He has also pregnancy checked 400 ewes in less than eight hours with this system.

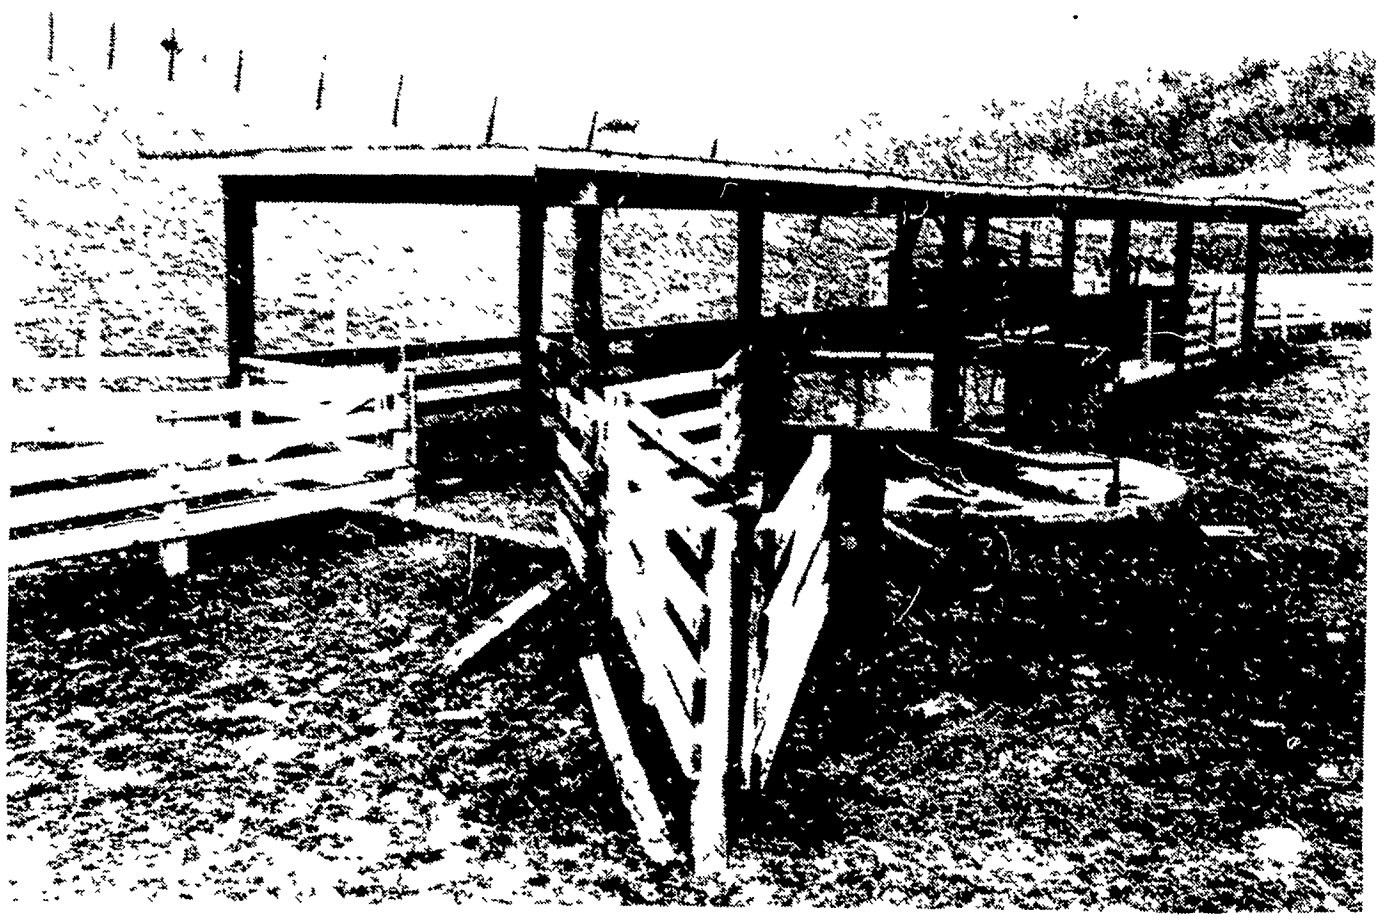
A long chute, which can hold 22 ewes, has enabled Wall to drench 300 lambs in 20 minutes. Wall says he does this by putting a wire hook on the drench gun and walks down the chute from lamb to lamb.

The barn is about 50 feet from the chute. Wall said he would "put the whole thing under a portion of the barn," if he had to do it again.

In building a chute, Wall said that you should "try to work the sheep back in the same direction that they came from." If the chute is curved, the sheep will move to see what is ahead. Wall's system is a modified U-shape. The sides are solid to "prevent the sheep from seeing over." He explained as a sheep sees daylight ahead, it will move toward it. He utilizes a 30 degree angle to the wall right before the sheep enter the chute itself. This keeps jamming to a minimum.

Wall feels "the most important thing about drenching is to coincide pasture rotation with it. In this area, parasites are so bad, it has put some people out of business. The key is to have rotating fields." Wall uses West Virginia guidlines for drenching. He stressed that four drenchings per year is the minimum for a flock. "If you have a large number of sheep, pick up some fresh

(Turn to Page 35)



John Wall runs his sheep up into a small triangular field behind his chute. Under the covered portion, the sheep can be shower dipped, drenched, and run through a foot bath. The rotating carousel on a concrete base allows Wall to trim hooves and pregnancy check his ewes with speed and ease.

Peach wood is believed to make good divining rods.

Ag energy advisory board proposed

SYRACUSE, N Y. – In a letter issued to New York's Governor Hugh Carey, the Northeast Dairy Cooperative Federation (NEDCO) has requested he establish an Energy Agriculture Advisory Board to effectively interpret the state's critical need of adequate energy supplies for its food producers

According to NEDCO President Edward McNamara, current energy shortages could have a long-range effect on producers from not only the supply end but also in the form of increased food prices to consumers In one year, from March 1978 to March 1979, energy costs to food production have escalated rapidly natural gas up 9.5 per cent, gasoline up nearly 20 per cent; industrial power up 4 per cent. This situation definitely affects food production," McNamara stated.

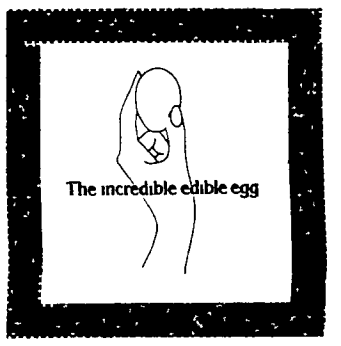
McNamara believes that the proposed Energy Agriculture Advisory Board could act as advisors to the Departments of Agriculture, Commerce, Transportation and Environmental Conservation in the field of food energy priorities in an attempt to obtain needed supplies of gas, oil and coal, where they are most needed and to help create more efficient use of these forms of energy.

The NEDCO President suggested in the letter that Governor Carey member the committee with representatives of the farming sector, food trucking industry, both raw and processed products, and the food manufacturing industry. McNamara feels that each of these segments of the State's food production chain must receive their fair share of energy supplies to insure a healthy food producing industry in New York State.

Stretched day strengthens eggs

GETTYSBURG -- Providing a light-dark cycle of greater than 24 hours has shown an improvement of egg size and shell quality at the expense of egg numbers throughout the laying cycle. Recently a research trial was conducted in Canada to determine the effect of longer light-dark cycles would have on layers toward the end of their production cycle. The trial used 62 week old layers - one group on 14 hours light and 10 hours dark and the other group on 14 hours dark. There was in immediate increase in egg shell quality and an increase in egg size. Egg production was not affected by this treatment in this trial.

It appears that egg shell quality of end-of-lay birds can be substantially improved with a 28 hour day (14 hours or may not be beneficial, depending on the strain of birds used. Also, there may be practical problems of timing of labor for egg gathering and processsing with 28 hour days, says John Schwartz of the Adams County Cooperative Extension Service.



The Governor's Energy Council estimates that 42,000 gallons of gasoline are being wasted daily by Pennsylvania motorists exceeding the 55 mile-per-hour speed limit.

Sheep and goats

Abortions, parasites to be studied

WASHINGTON, D.C. – Epizootic abortion in ewes and internal parasites of sheep and goats will be studied by scientists in Idaho and Washington under two cooperative agreements with the U.S. Department of Agriculture.

Under a 2-1/2-year $30,000 agreement with the Department's Science and Education Administration (SEA), scientists at the University of Idaho, Moscow, will design and test a vaccine against epizootic abortion in ewes. Sheep flocks chronically infected with the disease lose three to five per cent of their lamb crop annually and losses can go as high as 30 per cent.

The scientists will grow a bacterium – Chlamydia psittaci – in cell cultures and test it as a vaccine against the disease. Preliminary indications are that the bacterium could be used to minimize losses.

In the second study, a one-year $43,000 agreement with SEA, scientists at Washington State University, Pullman, will survey Washington, Idaho and Oregon to determine which internal parasites are causing the most problems in sheep and goats. The scientists will then develop control measures small farm operations can afford.

Current diagnosis and treatment methods are too costly and time-consuming for smaller farm operations, and though internal parasites have been studied, much remains to be done.

These studies will help resolve problems that can pose serious hardships for smaller farm operations across the country, according to SEA scientists

Bacteriologist Donald G. Waldhalm will represent the University of Idaho in the first study and veterinarian Richard B Wescott will represent Washington State University in the second David T Shen, Pullman, Wash., will represent SEA in both studies

Some people have believed the herb thyme could drive away fleas.

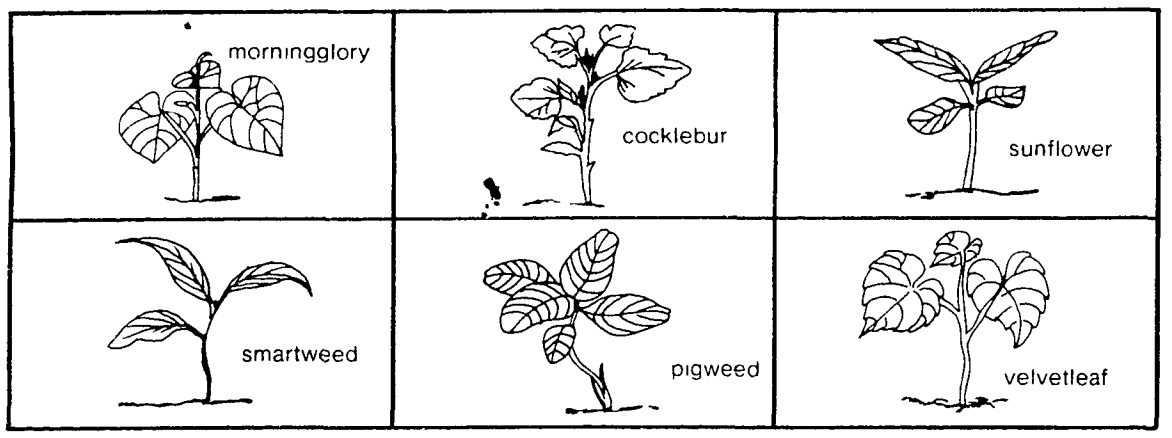
Pick the weeds in your corn you'd like to get rid of...



Then pick Banvel® herbicide... the Big Plus...to do the job.

Pre-emergence: Banvel tank-mixed with *Lasso® to get broadleaf weeds along with grasses...ready and waiting when later weeds germinate.

Early layby (in corn up to five inches high) use Banvel to stop weeds before they've had a chance to develop This Banvel overlay controls cocklebur, sunflower, annual morningglory, other troublemakers.

Post-emergence (corn up to 36 inches) Banvel herbicide controls the real problems—like smartweed, velvetleaf, bindweed, and seedling Canada thistle

Before buying a less adaptable herbicide that may be short on performance, check out the Big Plus of Banvel .from Velsicol

*Lasso® is a registered trademark of Monsanto Company The Lasso + Banvel tank mix is cleared for use in Colorado Illinois Indiana Iowa Kansas Kentucky Michigan Minnesota Missouri Montana Nebraska New York North Dakota Ohio Pennsylvania South Dakota Utah and Wisconsin

Magic Cow featured with chocolate drink

ROSEMONT, Ill. - The American Dairy Association and R.J. Reynolds Foods are teamed for an intensive June promotion of milk and Reynolds' new chocolate flavored syrup, "Milk Mate." The theme, "Make a Great Tasting Chocolate Magic Cow with Milk Mate" combines ADA's popular "Magic Cow" drink idea with Reynolds' highly successful entry into the chocolate milk flavoring field. The flavorful combination encourages in-home consumption of milk and promises significant increases in retail sales.

The campaign will be launched with a 30-second television commercial that will be aired on the NBC and ABC TV networks 35 to 40 times the week of June 3. The commercial will deliver 150 gross rating points and more than 100 million viewers impressions. In it, the Magic Cow character shows two children how to mix a chocolate "Magic Cow" with "Milk Mate" and announces a June 10 Sunday supplement coupon for Reynolds' product.

The strength of the "Milk Mate/Magic Cow" cooperative campaign is based on Reynolds' 1979 "Milk Mate" advertising budget of over $6 million, the broad scope of ADA's total dairy promotion and the public's initial acceptance of the chocolate product.

The $6 million budget for the basic "Milk Mate" marketing program, which does not include the chocolate "Magic Cow" campaign, is greater than the total spent for advertising all other chocolate flavored milk additives in 1978.

According to Reynolds, "Milk Mate" is one of the year's best selling new products. When RJR Foods took it over in August 1978, "Milk Mate" was available in 25 per cent of the country Reynolds launched heavy broadcast and print advertising in December 1978 and completed expansion of "Milk Mate" to the remaining markets in February 1979. SAMI (Selling Areas-Marketing, Inc.) figures for March 9, 1979 showed that "Milk Mate" had captured 14 5 per cent of all pound sales to retailers from grocery wholesalers for the total market, with highs of 52 per cent in some areas In three months, "Milk Mate" had become the third largest seller in the category.

Since "Magic Cow's" introduction in 1977, ADA has spent $3 million advertising the drink idea, which originally was promoted as milk plus powdered drink mix Association surveys show 50 per cent of all consumers recognize the "Magic Cow" as a unique drink

This Summer the 'Magic Cow" will receive additional exposure as part of ADA's generic dairy product promotion, "Carefree Days the Dairy Way." ADA sales staff and member state dairy groups will help promote the "Milk Mate" chocolate "Magic Cow" as a tie-in to their June Dairy Month activities and the "Magic Cow," without mention of "Milk Mate," will appear in ADA "Carefree Days" point-of-sale materials at over 19,000 supermarkets and convenience stores.

As part of the joint campaign, after the network television introduction of the "Milk Mate Magic Cow," a 25 cent coupon for "Milk Mate" will appear June 10 in a full-page, four-color Sunday supplement advertisement. The coupon is estimated to reach 67 per cent of all households, and Reynolds expects an eight per cent redemption rate due to the high value of the coupon and the strength of the total campaign. Combined with the large numbers of households reached, the high redemption rate should mean that five per cent or more of all store customers will redeem the coupon.

Reynolds has also created a store display that transforms a shopping cart into a cow figure with the familiar face of the Magic Cow. The display, designed to hold 10 to 12 cases of "Milk Mate", will be placed at 15,000 to 20,000 supermarket dairy cases. Other point-of-sale materials, for display in the "Milk Mate" product area, will be available to stores not using the cart package.

Wall's sheep

(Continued from Page 35)

pound minimum tension." Wall said the fence can withstand 1000 pounds of livestock pressure or low, temperature contraction without losing it's elasticity.

The tension of the fence is maintained by seasonal adjusting of permanent in-line wire stretchers Electric can also be incorporated into the system. Wall's wife imports and sells accesories to go with the fence.

Wall said the fence has a "27 per cent savings in labor," and a "life expectancy of 40 to 50 years." The system requires sturdy, pressure treated wood posts and double bracing at the end, corner and gate locations.

"Line post spacings can be on 16 foot centers over uneven terrain, or as great as 60 foot over level terrain," added Wall. Hardwood, pressure treated droppers are utilized between posts

"In my experience, a 10 wire fence, under tension, is a deterrent for a dog," Wall concluded.

"DAIRYMEN"

ROUGHAGE IS THE BACKBONE
Of Profitable Dairy Feeding!
Roughage deserves your special attention.
That's why we recommend
ALFA–ZYME
For Your Haylage and Mow Hay!
★ Recent years have seen the development of products to increase the value of roughage . . .
★ OVER 10 YEARS AGO, we experimented by sprinkling ALFA-ZYME over the hay as it was placed in the mow. By putting the hay into a sweat, ALFA-ZYME GREATLY INCREASED THE PALATABILITY OF THAT HAY!
★ Tests continued to cover all types of weather - wet, normal and dry years - with excellent test results.
Recommended Usage for ALFA–ZYME:
★ 50 Lb. to 300 Bales of Hay
★ 50 Lb. to 200 Bales of Rained On Hay
★ 50 Lb. to Each 3 Tons of Haylage.
★ ATTENTION ★
If You Are A User Of ALFA-ZYME And Have Recently Moved, We Probably Have A Dealer In Your Area. Contact Us And We Will Be Glad To Provide You With The Name Of Your Nearest Dealer.

Life on the Farm

by Dieter Krieg, Editor

Most of our cows at home had names. All of them had numbers. More interesting than either of these methods for distinguishing between them was that they all had personalities.

We knew certain cows by the way they walked, crossed their legs, behaved at feeding time, and came in to be milked. Knowing the animals in this way made dairying all the more interesting. Whether we had raised the cow from birth, or purchased her just a few months ago, her personality was exclusively hers.

Oftentimes behaviorial patterns inspired appropriate, although unusual names, such as "Speedy," "Wiseguy," and "Milkdrinker"

"Speedy" was an individual who could slurp up her milk faster than any other calf in the barn. "Wiseguy" was notorious for refusing her own

bucket of milk in order to try as hard as possible to steal milk out of other calves' buckets. If she couldn't do that she'd get mad and try even harder to tip the bucket and spill the contents into the trough. Then she'd suck that up hurriedly and finally go on to her own bucket to complete her meal. "Milkdrinker" was a fully grown cow when she came into the herd.

She earned her name by always stretching her neck out as far as she could when someone was on his way to the milk house with full milk pails. One day I thought I'd satisfy her curiosity by letting her get a closer look To my surprise, the big black lummox stuck her nose into the pail and wasted no time getting a drink.

From then on she always took care of surplus colostrum.

Dairying has its serious and unpleasant moments. But for the most part it's an enjoyable career. It's the cows themselves who make it so by being interesting animals — through their personalities, their performance, their pedigrees, and the records which a dairyman keeps on them. There's a lot more to cows than just milk and plenty of work.

They're also a wonderful source of enjoyment for life on the farm

York Farm Credit staff expanded

YORK – The Farm Credit Association of York recently announced the appointments of Frank J. Cerda and Sandra Markey to the posts of field representative and credit division assistant, respectively.

Sandra Markey was raised on a 100 acre fruit, vegetable and livestock farm in York County. She is the daughter of Mr. and Mrs. Ronald Markey. Sandra was graduated from Dallastown Area High School and has taken accounting courses at York College of Pennsylvania. She has reigned as the Community Queen for the York County Poultry and Apple Growers. She was the Pennsylvania Apple Queen in 1978. Sandra was formerly employed in the installment loan department of a commercial bank.

Sandra's responsibilities will include taking in-office loan applications, Court House functions and representing the Federal Land Bank Association at loan closings.

In order to provide more efficient service to eligible applicants in Adams County, the York Associations announce the following transfer: Kenneth S. Lewis, currently a Field Representative working out of the York office, will be transferring to the Adams County office in Gettysburg.

Francisco (Frank) J. Cerda, a native of the Dominican Republic, was raised on a livestock and crop farm. Frank received his Bachelor's Degree in Agriculture Sciences in 1969 from the College of Agriculture in the Dominican Republic. Frank has had three years experience as an agriculture loan officer and assistant supervisor with the Agriculture Bank of the Dominican Republic.

Frank J. Cerda

Sandra Markey

Frank and his wife, Ann Marie, formerly Ann Marie Forkey, of York, reside in Mt. Wolf. They have one son.

Frank will be servicing the credit needs of agriculture and eligible rural home residents in northern and southwestern York County.

Ken was graduated from Hempfield Area High School and received his Bachelor's Degree in Agriculture Economics from Cornell University in June of 1978. He will be working with Forrest L. Stouck, assistant manager in charge of the Gettysburg office.

The Farm Credit Associations of York are part of the nationwide farmer-owned Farm Credit System. The York Associations serve the credit needs of Adams, Cumberland, Franklin, Fulton, Perry and York Counties. Current dollar volume outstanding is approximately 80 million dollars, representing 1700 accounts.

Plowing near completion

HARRISBURG - Only two days were suitable for fieldwork in the commonwealth during the week ending May 27, according to the Pennsylvania Crop Reporting Service Adequate rainfall was welcomed by farm operators, however, as fields had been getting very dry and crops showed a need for moisture.

One third of the farmers surveyed rate soil moisture as adequate while the remainder reported surplus Only a few of the surplus reports are from the north

Plowing is virtually complete across the state Last year at this time 87 per cent of Spring plowing had been completed

At 36 per cent planted, soybeans are six days ahead of the 13 per cent planted a year ago The north stands at 48 per cent, central counties have planted 39 per cent and the south is 17 per cent planted Some operators are concerned that the rains may have rendered recent spraying useless useless

Potatoes are now 84 per cent planted, also six days ahead of the 72 per cent last year at this time. The crop is virtually all planted in the south, with 92 per cent in central counties and 73 per cent in the north. Potato beetle adults are evident.

Corn is 78 per cent planted, eight days ahead of last year's 48 per cent and also ahead of the normal of 70 per cent. Planting stands at 72 per cent in the north, 84 per cent in central areas and 82 per cent in the south. Germination has been somewhat uneven with concern that recent rain and standing water may result in some poor stands of fields not yet germinated Weed control is very poor in some fields.

At 65 per cent headed and 26 per cent in boot, barley is nine days ahead of the 22 per cent headed last year Heading stands at 35 per cent in the north, 75 per cent in central counties and 85 per cent in the south. Wheat is 37 per cent headed with 47 per cent in boot. This is seven days ahead of just five per cent headed last year. Heading stands at 26 per cent in the north with central and southern areas at 42 and 41 per cent respectively.

Alfalfa hay is in good condition with clover and timothy mostly good to somewhat fair. The first cut of alfalfa hay is six per cent made with 78 per cent of that for silage. The quality of hay made last week was mostly poor. Overmaturity plus rain after cutting contributed to the poor quality. Spittlebug, alfalfa weevil and leaf miner are all taking their toll on the hay crop. Feed from pastures which were in need of rain is average.

Early sweet corn is up and doing well. Some strawberries will probably be ready to pick this week. Apples are now all in or past full bloom. Some varieties have a poor set. Apples show a high population in some areas of green aphid, rosy apple aphid, tufted apple budmouth and oriental fruit moth.

Farm Calendar

PH: 717-724-5369

Get alfalfa weevils. Get aphids.

And get the Penncap-M Insecticide bonuses: less hazardous handling and extended control.

PENNCAP M is the bonus insecticide that protects your valuable alfalfa crop from both weevils and aphids And it does the job economically with less hazardous handling during application

You can't beat that

Your control bonus

PENNCAP M provides broad spectrum control of the most trouble some insect pests Egyptian alfalfa weevils alfalfa weevils and pea aphids Another bonus in California and Arizona PENNCAP M is registered for control of blue alfalfa aphids

And good news for alfalfa growers in Kansas and Nevada PENNCAP M can be used to control blue alfalfa aphids because of Special Local Needs (SLN) registrations

Additionally PENNCAP M is registered on an SLN basis for control of grasshoppers on alfalfa in lower Kansas Nebraska and South Dakota

Your yield bonus PENNCAP M is agriculture's first microencapsulated pesticide You get extended control in the field because methyl parathion is released slowly from tiny porous microcapsules And because the microcapsules cling well to alfalfa plant surfaces you keep the active ingredient on leaves and stems where it can protect your crop possibly reducing the need for retreatments Good leaf protection helps you cash in on maximum protein high tonnage and high yields

Your less hazardous handling bonus Microencapsulation reduces the toxicity hazard to humans (compared to EC formulations of the active ingredient in PENNCAP M) Your applicators will appreciate this difference In fact PENNCAP M does not require the skull and crossbones insignia on its container

PENNCAP-M works It's the insecticide that gives you effective extended control less hazardous handling and broad spectrum killing action all at an economically low cost

Get PENNCAP M and knock profit robbing pests out of your alfalfa Microencapsulated PENNCAP M it's the bonus insecticide that protects your crop

PENNCAP M is a Restricted Use Pesticide for retail sale and use only by certified applicators or persons under their direct supervision and only for those uses covered by the applicator's certification

WHAT'S NEW

GRINDER-MIXER

A new grinder-mixer featuring a tank with inverse taper sides over a short, steep cone handles dry grain and roughage in any combination up to 100 per cent roughage, according to Sperry New Holland.

The new Model 358 has 125-bushel tank capacity, a 130 hp pto drive line and a 21-inch mill. The mixing auger tapers from 37½-inch diameter at the bottom to 17½-inch diamater at the top to provide uniform blending. The mixing auger turns in a tube supported from the top of the tank to help provide non-bridge performance in high-roughage mixes preferred by many livestock feeders.

Both 540 and 1000 rpm drives are available along with the choice of either hydraulic or mechanically driven loading auger or power balefeeder. Eight-inch diameter unloading augers are standard for machines equipped with loading augers. Machines shipped with power bale-feeders are supplied with 12-inch diameter U-trough unloading augers. Unloading auger extensions go to 20 feet. Electronic scales are available for the Model 358.

Environmental monitoring

(Continued from Page 24)

over the discharge of contaminated water from the plant, we certainly have a moral responsibility to make sure nothing is done to harm the river or the people who depend on it," he said

Jones said DER will continue to collect daily composited samples of water from the plant's discharge pipe and at two locations downstream

DER has installed two important monitors on the plant's discharge pipe

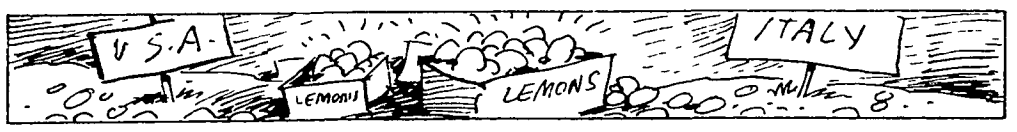
One, a continuous sampler, takes a small amount of the discharge water every 15 minutes The composited sample is picked up daily and analyzed to determine the kinds and amounts of isotopes discharged

The monitor gives continuous readings of the level of radiation being discharged It will set off an alarm if a pre-set level of radiation is exceeded

The monitor is connected to a strip chart in the Harrisburg office of DER's Bureau of Water Quality, where it will be watched closely during working hours

At other times, two DER employees will be equipped with portable alarms that will sound if the monitor detects any problems

Reilly said all organizations doing environmental monitoring are prepared to change their sampling frequency if there is reason to believe the conditions at the plant have deteriorated from the present safe status.



The U.S. and Italy are the chief producers of lemons.

Pa. egg production up

HARRISBURG — April 1979 egg production in Pennsylvania totaled 308 million according to the Pennsylvania Crop Reporting Service. This was 12 per cent above the 274 million eggs produced in April 1978.

The April average of 14.6 million layers was nine per cent higher than a year ago. Egg production per 100 layers during April was 2,109 compared with 2,055 in April 1978

The nation's laying flocks produced 5.69 billion eggs during April, two per cent more than a year ago. The number of layers during April averaged 285 million, compared with 279 million in April 1978. Egg production per 100 layers during the month was 1993, about the same as a year ago.

USDA urged to reconsider meat labeling requirements

PARK RIDGE, Ill. – The nation's largest farm organization recently urged the United States Department of Agriculture to reconsider its labeling requirements for meat that is mechanically removed from the bone.

John C. Datt, secretary and administrator for the American Farm Bureau Federation said, "Millions of dollars of product that could be mechanically removed from bone is being lost to human consumption."

Datt, in a letter to Carol Foreman, assistant secretary of agriculture, said it would be timely in light of reduced supplies of beef to change current labeling requirements to make this wholesome product more acceptable to consumers.

Meat packers reportedly have found that the new USDA labeling requirements infers an inferior product and inhibits sales, according to Datt.

Meat processors should be allowed to include the name "mechanically processed species (beef, pork, lamb, mutton) product" and the calcium content in the ingredients statement, the Farm Bureau leader concluded.

Toney Penna Talks Golf

Persimmon or laminated woods? That's a dilemma many golfers face when selecting new clubs

Persimmon is a close-grained hardwood tree Most touring professionals play with persimmon woods Maybe that's one reason persimmon is considered the Rolls-Royce of golf woods The wood for a persimmon, clubhead costs the manufacturer three to five times as much as the wood for a laminated clubhead.

Cross-grained persimmon, taken from the heart of the tree, is hard and durable. It's both kiln-dried and dried by the modern radio frequency method to remove *all* moisture And then it's oil-hardened

On the other hand, it's difficult for most golfers to tell the difference between persimmon and high-quality laminated wood if the clubhead is finished in black, which conceals construction details. The clubheads sound and feel the same And a quality club of either type will hit the ball as far as the other.

Hog outlook

(Continued from Page 1)

But, Fisher reasoned, Feeder pigs are going to have to get pretty cheap if there are enough available for finishing houses, or some finishing units will stand empty "

Mark Nestleroth, Manheim R5, thinks that some of the big hog complexes are at their rock bottom price now, if they want to continue to make a profit He sees 43 to 45 cents as the price needed to break even, although he added that the market price needed depended on the amount of investments the hog producers had

"There is a three year hog cycle, basically," he mused But hog prices should never get less than half the price that slaughter steers are bringing Right now cattle are bringing about 72 cents, that means hogs shouldn't go below 36 cents That's cutting it pretty close, some hog producers would be cutting back on production, they couldn t make a living on that "

' The price could go up to 50 to 52 cents a pound, according to reports, ' he reasoned 'But if it doesn't go up this Summer, and I was thinking of expanding, I wouldn't do it '

It definitely will go down in the Fall, he added 'But if the price rises over the Summer, as it should, the Fall drop will be livable "

There is no way that the hog expansion in our area is slowing down," he emphasized

Lancaster County is close to the markets and feed is plentiful and respectful in price here We're also located close to the packers, and transportation costs are down "

"But I noticed that the sow kills in the Midwest [illegible] slightly, about one per cent he explained This may be an indication that the expansion is slowing slightly out there and that would be good to see

Corn prices will someday go up," Nestleroth noted And that will slow expansion in a hurry

But right now there are too many variables to tell about the market The weather affecting the corn crop, the expansion of the finishing operations for hogs, and the cattle prices will all affect slaughter hog market prices "

Gary Dean, Strasburg R1, president of Lancaster Co Swine Producers Association, stated that the peak of the swine market season should be in June and July, and there should be price rises in those marketed hogs

We're looking for $40 hogs and below, come October," he commented Some of those buying feeder pigs now may not put as many in "

The cycle has been good for the past 30 months,"Dean added 'I guess it could be time to tighten the belts a little If the Spring farrowings are as high as they have been predicted, there are going to be an awful lot of pigs on the market this Fall But I think that the high beef prices are helping to hold the hog prices up, and will continue to do so "

Dennis Grumbine, president of the Pa Swine Breeders Co-op, Myerstown R2, echoed these thoughts adding that he thought the price of pork will rise this Summer, "bounce around, and towards Fall, stabilize."

'The price of corn and soybeans will determine the hog situation," he reasoned.

If soybeans and corn are high, next Summer pork should bring eight to 10 cents higher a pound than it is selling for now. But if there is a big corn and soybeans crop, and exports are down, we'll be going in the wrong direction."

'A big factor in th expansion movement of hog operations in the Midwest will be the grain prices, but that won't affect expansion here," he commented

Looking to the distant future, he added that when beef becomes abundant, the hog market could be hurting for there would be no high beef market to cushion the hog market.

"But," he added, "When the beef market increases, the corn intake for cattle increases Then the hog market will decrease, which should help the ease the situation."

Concerning the Fall hog marketing prices, Louis Moore commented that due to the market situations in beef and pork, "the stage will be set for consumers to shift some of their purchases from beef to pork. Retail pork prices will decline in the last half of the year while beef prices will still be climbing. With pork selling at 40 to 75 cents per pound less than beef, consumers will certainly be visiting the pork section of the meat case more often."

'Right to Farm' bill considered

TRENTON, N J. — The New Jersey Farm Bureau has successfully introduced an idea into the New Jersey Senate which may give farmers in the Garden State more relaxed conditions under which to do business. The New Jersey Senate's Agriculture Committee has begun hearings on the proposal

The "Right to Farm" bill was drafted in response to excessive regulations by local and county governments involved in the state's farmland preservation demonstration project which ended last July. The project allowed farmers to sell development easements in return for keeping their land in agriculture. However, those in the demonstration project found that local requirements were too restrictive and the state's assessments of agricultural land values were too high.

Testifying on the "Right to Farm" bill's behalf was New Jersey Farm Bureau president Arthur West, who said: "When farmers have to spend more time conforming with regulations than growing food, then farming is no longer profitable. When that happens, farmers will go elsewhere."

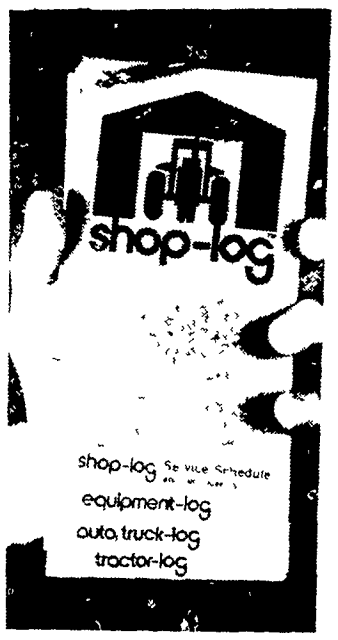
WHAT'S NEW



SHOP-LOG

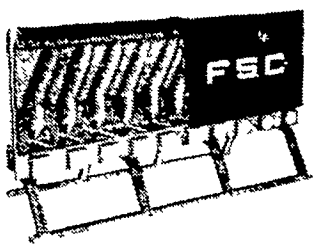
A new farm maintenance record system is announced by Technology Resource Systems of Chicago. Called Shop-Log, the ring-bound unit fulfills three important needs: 1) A place to record servicing done on each piece of equipment, 2) a single place to keep owner's manual recommendations, serial numbers, and warranty dates, and 3) a reminder schedule of when to carry out future checks and maintenance. Farmers can even use the schedule pages to assign shop and maintenance responsibilities to several people

Shop-Log is a sheaf of individual, indexed cards that can be hung on a nail in the farm shop. One card is used for each equipment item. Cards are divided into the following sections:

- **Tractor-Log cards,** for recording servicing and repairs on tractors and self-powered equipment such as combines and forage choppers.
- **Auto/Truck-Log cards,** for keeping track of work done—both on and off the farm—on trucks and passenger cars.
- **Equipment-Log cards,** for non-powered field and farmstead equipment, electric powered equipment, bins and anything else on the farm's depreciation list that requires occasional servicing and repairs.
- **Service Schedule and reminder list cards** provide a place where future maintenance jobs and warranty dates can be noted and work scheduled ahead.

Even buildings and household appliances can be included, giving the farmer and his wife a complete record of every item they own that requires a record of repairs, improvements or even damage sustained due to weather or accident

For more information, contact Technology Resource Systems, 150 South Wacker Drive, Chicago, Ill. 60606



MINERAL FEEDER

The Feed Service Corporation, Crete, Nebraska announces its latest mineral feeder, the Mineteria Model 30. Made of high density polyethylene, it will not rust or rot. Ten compartments, with feed down bins, allows the feeder to hold 750 pounds of mineral for large herds of cattle and less servicing. Two heavy rubber flaps make it very weatherproof Top-rear loading allows the feeder to be placed for convenience. It accomodates calves, says the manufacturer. Literature is available from The Feed Service Corporation.

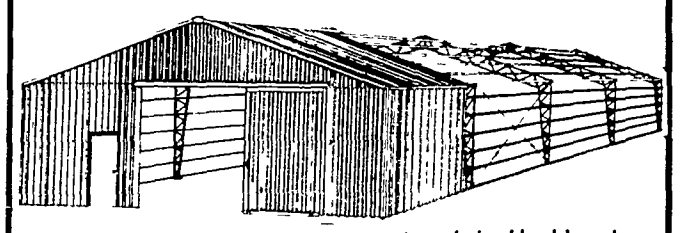
Grain Moisture Tester

Dickey -john Corporation, Auburn, Illinois, has introduced a new portable electronic grain moisture tester It features several refinements that are designed to make it more reliable and convenient

With its state of the art electronic circuitry, the new tester produces a temperature-compensated readout in fifteen seconds The readout itself is a larger liquid crystal display that is easy to read, even in bright sunlight.

The new Dickey-john Grain Moisture Tester is housed in a rugged molded case that includes a built-in protective dust cover The cover flips up and slides out of the way when the tester is being used. A sealed, pressure-sensitive temperature-compensation switch can't collect dust or moisture. Other new features include a wide, comfortable carrying handle and an easy-access battery compartment

This new farm building costs 40% less!



Yes, it costs 40% less than conventional steel buildings!

- It comes in a complete package steel columns and trusses, wood purlins and girts
- You get unobstructed floor space no poles
- You put it up youself the average building takes two men only two weeks or less to construct

It'll be worth your while to get the complete story about this AGRICONOMY building

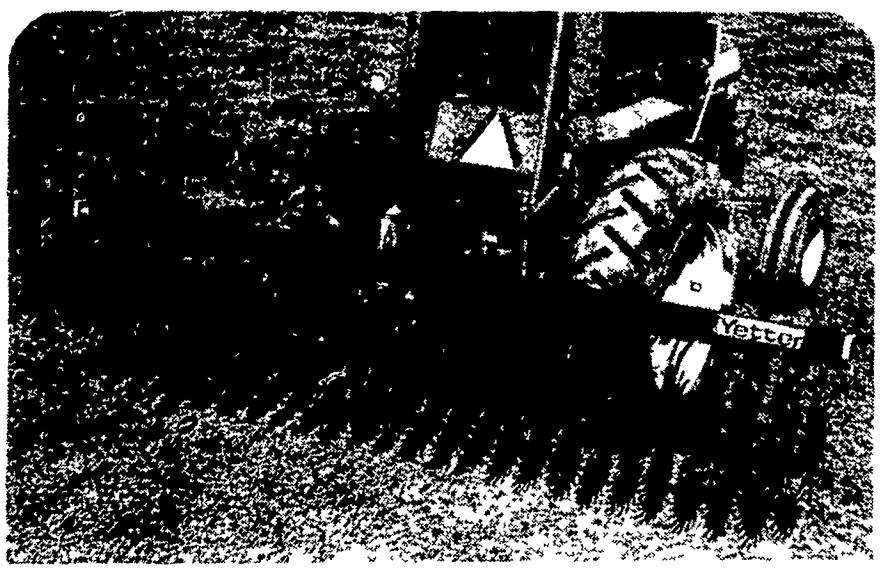
THE Yetter
TOOL BAR ROTARY HOE



THE YETTER 3400 SERIES ROTARY HOE IS ONE OF THE MOST FLEXIBLE AND VERSATILE ROTARY HOES ON THE MARKET TODAY!

—FEATURING—

■ **WHEEL AND BEARING ASSEMBLY** -Yetter's Rotary Hoe features 21" diameter wheels They are riveted for durability and turn on sealed ball bearings There are 16 rugged teeth per wheel Each spoon-billed tooth is hardened, drop-forged, and self-sharpening

■ **SPRING-CUSHIONED ARM ASSEMBLY** - Independently spring-cushioned arms permit the 3400 to follow the contour of any field insuring rock and obstruction protection Section mounting brackets are ¾ inch and designed to endure the most abusive field conditions

■ **ARM AND WHEEL ASSEMBLY** -Yetter engineers designed this hoe so there is only one wheel per arm, rather than two or more The result is greater flexibility and less stress on the arms Each arm is made of high strength ductile iron Wheel spacing is 3½"

IF YOU ARE LOOKING FOR AN EFFICIENT HOE THAT FEATURES QUALITY AND RUGGED DURABILITY, THEN YOU WANT THIS YETTER 3400 SERIES ROTARY HOE

Prospects good for East European farm trade

WASHINGTON, D.C. — A slight decline this calendar year in U.S. wheat exports to Eastern Europe may be more than offset by larger shipments of corn and soybean meal, according to the U.S. Department of Agriculture.

In a report released by the department's Economics, Statistics, and Cooperatives Service, economists said U.S. farm exports to Eastern Europe will be worth nearly $1.3 billion, five to 10 per cent above 1978.

This favorable outlook is based on higher export prices and a demand for imported feeds that will remain at least at the 1978 level.

Agricultural growth plans in Eastern Europe this year range from a projected two per cent increase in the German Democratic Republic to a seven per cent increase in Bulgaria. All country plans emphasize the need to reduce imports and increase exports. Reflecting the region's concern over feed grain imports, the area planted to corn and barley is expected to increase. Plans also call for expanded oilseed output. The larger area set for feed grain and oilseed production will be offset by a reduced area planted in potatoes and low yielding forage crops.

In the livestock sector, plans generally call for a slower growth rate of livestock numbers and for increased meat production through greater feeding efficiency rather than larger livestock inventories.

Last year, Eastern Europe's gross agricultural production rose slightly, but less than planned. Grain, sunflowerseed, and soybean harvests reached record levels. Potato output climbed, but sugarbeet and tobacco production declined. The region continued to rebuild its livestock herds, and hog, sheep, and poultry inventories stood at record levels in January, 1979.

U.S. agricultural exports to Eastern Europe rose from $900 million in 1977 to $1.2 billion in 1978. Poland remained the area's leading market for U.S. farm goods, taking more than $500 million, but the German Democratic Republic, Romania and Yugoslavia each imported more than $100 million. Grains, oilseeds and oilseed products were the principal exports,f accounting for over four-fifths of total shipments.

Single copies of "Eastern Europe Agricultural Situation, Review of 1978 and Outlook for 1979," are available free from ESCS Publications, Room 0054-S, USDA, Washington, D.C., 20250.

Farmers' newsline available

HARRISBURG — Did you know that there is a Farmers' Newsline?

One can hear the latest crop, livestock, and farm economic information from Washington, D.C., every day of the week.

The Farmers' Newsline reports change each weekday at 4 p.m., Washington, D.C. time, but the service is available 24 hours a day, seven days a week. The service is sponsored by the U.S. Dept. of Agriculture Economics, Statistics, and Cooperative Service.

The special toll-free number to call is 800-424-7964.

From the Pa. Dept. of Agriculture, Bureau of Markets, Livestock division, one can also receive toll free livestock market news reports. If one's area code is 717 or 215, one should dial 800-692-7253; if the area code is 412 and 814, one should dial 800-942-8084.

Black light trap guards Delaware's crops

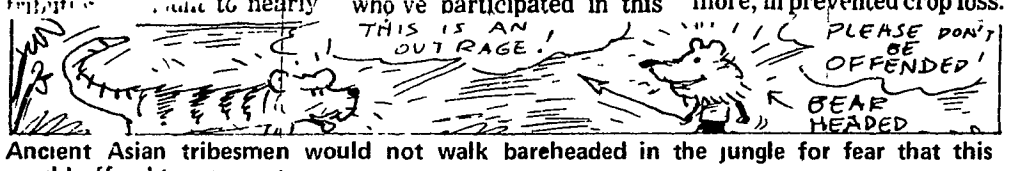
(Continued from Page 26)

the European corn borer, corn earworm, true armyworm, and the tobacco hornworm, for instance, are highly indicative.

A second group of insects is less easy to pinpoint because we know less about them. They also may not be as attracted to the traps. For this group – which includes the Fall armyworm, black cutworm, beet armyworm, and green cloverworm – catches are only moderately indicative of levels of infestation you can anticipate. While a third group – including aphids, the Mexican bean beetle, Colorado potato beetle, and alfalfa weavil – is not attracted at all by the black light. Fortunately, there are other ways to monitor their presence.

How do farmers get news of black light findings and their implications? Routinely, in Delaware and Maryland by way of a weekly newsletter, "The Integrated Pest Management Report," which is mailed to their homes during the growing season But during any pest emergency county Extension agents, area radio stations, and the newspapers pitch in to help publicize the alert With this kind of delivery system, the message soon gets out.

This highly successful black light trap program depends heavily on the support of volunteers and voluntary contributions for its existence So far this year in Delaware alone contributions have come to nearly $5000 This money goes to hire an IPM assistant to help collect and analyze light trap data, and to repair and maintain the traps themselves Ask the farmers who've participated in this program over the years, and they'll probably tell you they've saved much more than this, individually, just in pest control costs. Beyond this many have saved much more, in prevented crop loss.



Ancient Asian tribesmen would not walk bareheaded in the jungle for fear that this would offend tigers.

NFU presidents strongly in favor of gasohol

WASHINGTON, D.C. – Farmers Union presidents from three major Corn Belt states recently told Congress that development of motor fuels from renewable agricultural sources is long overdue and that a firm timetable should be set for obtaining a significant share of fuel needs from such sources. Appearing before a joint hearing of three Agricultural subcommittees in support of gasohol legislation were Harold Dodd of Illinois Farmers Union, Lowell E. Gose of Iowa Farmers Union, and Neil Oxton of Nebraska Farmers Union.

Dodd said that "using renewable starches for fuels is the only thing America has going for it that will break the stranglehold OPEC and the oil people have on us."

Agricultural source material for ethanol is diverse and includes such products as corn, potatoes, sugar beets, sugar cane, wheat, milo, wood sugar, sweet potatoes, and cheese whey, he explained.

Oxton recommended that federal efforts should give "special emphasis to production systems stressing on-farm and local cooperative size development."

The Nebraskan cited a recent engineering study indicating that alcohol production from corn is energy-efficient, taking something between 15,000 to 20,000 BTU's of energy to produce a gallon of 200-proof alcohol, representing about 75,000 to 85,000 BTU's of energy.

Gose said that gasohol development "will expand demand at a time when grain prices are severely depressed and will, if properly directed, restore some competitive forces to the energy production sector." However, Gose warned that gasohol development will be only a partial solution to the energy crisis and the problem of low farm prices, and observed that farmers will still need the farm support programs, the set aside, and good soil conservation practices.

WHAT'S NEW

SPREADER

A new 510-bushel box type spreader from Sperry New Holland features walking-beam tandem axles to ease the 14-ton-capacity load over rough ground. Optional automatic surge brakes are available to add additional control on slopes, explains products manager, Dennis Raaen.

The spreader's ASAE heaped capacity rating is 570 cubic feet.

An optional hydraulic endgate and fine-manure pan enable the machine to handle wet slurry-like manure as well as dry poultry manure with good spreading characteristics, says Raaen.

Like other box-type Sperry New Holland spreaders, the new Model 800 is covered by the firm's Bonded Protection warranty to replace the steel sides if they should ever rust out. This warranty is not limited to the original owner, but follows the machine regardless of ownership changes, and is not limited in time.

BUILDING GUIDE

HOUSTON, Tex. – A Farmer's Building Guide has been issued by Quonset, the agricultural division of National Steel Products Company.

Farm building planners may find help in things they might not have expected – like the five essential items a farm building has to have and 10 ways to avoid expensive mistakes in planning farm buildings.

Quonset's guide shows how much space is needed in each part of hog building and feedlot operations – and how much difference there is in space requirements in buildings for breeding stock, the farrowing house, and the growing and finishing areas.

There is advice on storing both grain and grain-harvesting equipment – all sorts of farm machinery, in fact.

The guide also offers tips on how to make sure a salesman doesn't disappear with farm improvement dollars, leaving a seond-rate building, or no building at all, behind him.

Quonset and National Steel Products Company are headquartered in Houston. NSPC is a subsidiary of National Steel Corporation, Pittsburgh, Pa.

CONSIGNMENT MACHINERY & EQUIPMENT AUCTION

Located on Rt. 15 between Tioga and Lawrenceville, Pa., on the Gordon Wood Farm.

SATURDAY, JUNE 9

AT 12:00 SHARP

CHARLES & NANCY COLEGROVE OF MANSFIELD have sold their herd and have consigned all of their machinery as follows: Oliver 1600 gas tractor; Minneapolis Moline 445 tractor; JD. 1 row side mount Chopper with knife sharpener; N.H. 273 baler with thrower; N.H. 479 haybine (good); N.H. 23 hopper blower; N.H. 256 side rake (real nice); Lamco self unloading box with roof and Gehl running gear; Gehl wagon with kicker rack; JD 34 spreader; AC 14" four bottom semi mounted plows; Oliver 3 bottom 16" trailer plows; JD. 3 pt. corn planter; JD 36 tooth harrows; JD skelton elevator with transport, 3 pt. feeder and fertilizer sower; 500 gal. Girton bulk tank and compressor;s dump station with washer and dryer; 50' nearly new 9" plastic silage pipe.

Lancaster Co. FFA president

Don Brubaker's future is in farming

By KENDACE BORRY

STRASBURG — Being named president of the Lancaster County FFA is just another step to the fulfillment of Don Brubaker's dreams and goals.

The 17-year-old junior at Lampeter Strasburg High School has been a member of the Garden Spot FFA since ninth grade. And he stated that it was a hard decision to make to decide to enter FFA, but once he made up his mind that farming was the only occupation that would really make him happy, he threw himself wholeheartedly into the project, and has been busy ever since.

Living with his parents, Mr. and Mrs. Harold Brubaker, and four brothers and sisters on a 65 acre hog and chicken operation, he noted that it is "quality and not quanity, that counts, on a farm."

Don told that his responsibilities on the place range from "anything and everything that needs to be done at the moment" including doing the trimming and maintaining of the family's tourists cabins, watching over and cleaning the chicken houses, and caring for the hogs that are completely his own project.

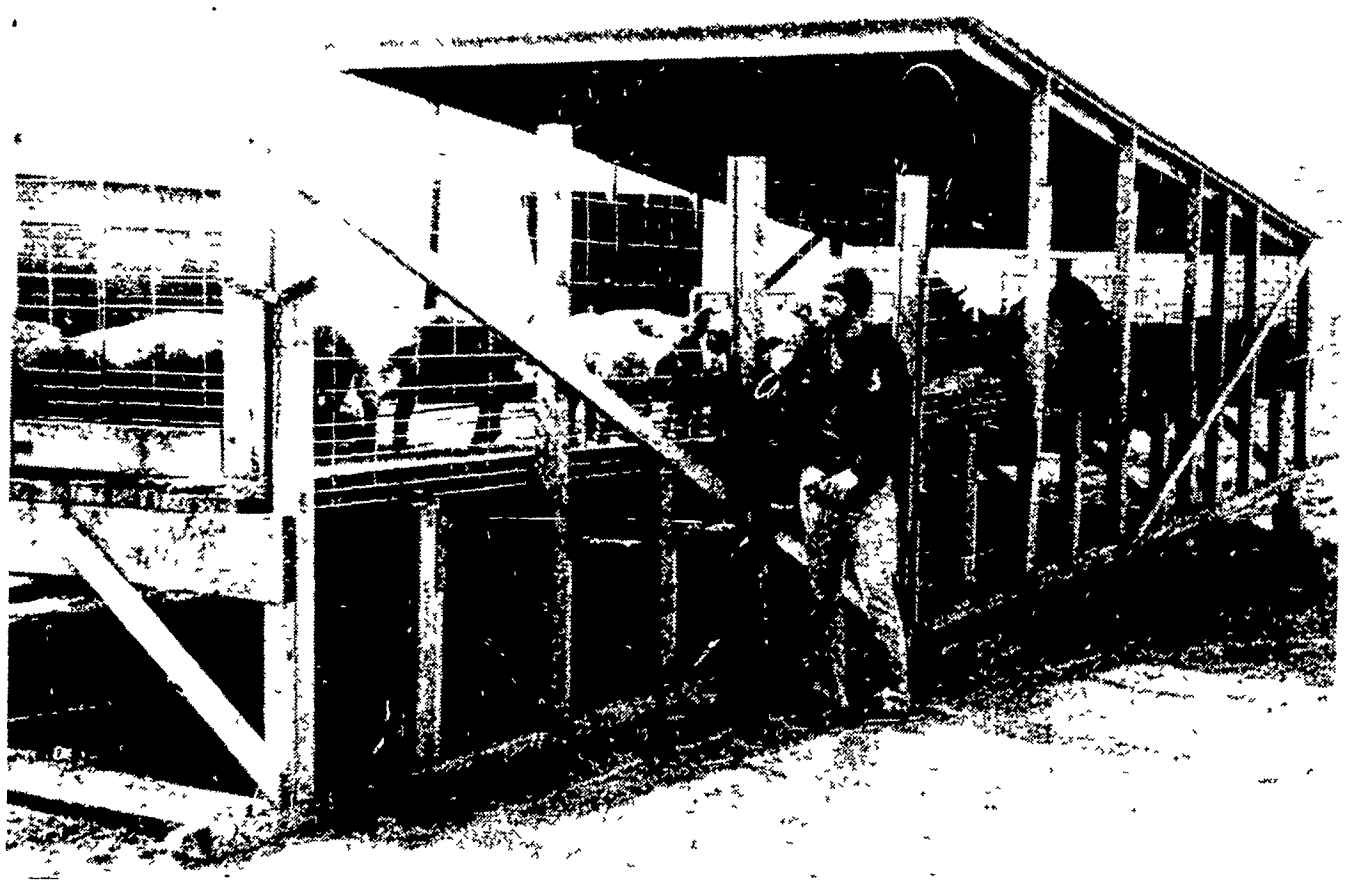
Constantly reaching to improve and enlarge his hog operation, he has built his own farrowing house, which includes two farrowing crates and a weaning pen. He also constructed a finishing pen for 70 feeder pigs.

Future plans include a feedlot for his sows, and modifying part of the barn so that it is environmentally controlled for the feeder pigs.

He also owns his own feed grinder and noted that he has a service man from the company that he contracts his hogs to, come out every two weeks to check all of the animals.

He has been active in his FFA chapter, holding the offices of assistant vice president, vice president, and student advisor. He served as a county FFA delegate for three years before winning over three

(Turn to Page 51)



Standing at the hog finishing pen that he and his father built, Don Brubaker, president of the Lancaster County FFA, surveys his young pigs.

Don Brubaker

(Continued from Page 50)

other candidates to be named president of the group.

His awards and accomplishments abound.

In ninth grade he was named star greenhand, and in tenth grade he had the honor of being the star chapter farmer. He also took the swine proficiency award

In 11th grade, he again won the swine proficiency award as well as the Lancaster County Bankers Award, the Red Rose Degree, and the DeKalb Achievement Award. He was named the alternate County Red Rose Farmer.

In county competitions, he did well, having won 15 ribbons doing fair judging in Lancaster County, among other things.

He showed his hogs last year at the Lampeter Fair, where he received a third, second, and first place ribbon and a reserve championship for his pair of hogs. He also placed fourth in his corn (10 acres) class.

He was on the class meat judging team for his school which this year placed second in the county contest.

And on the state level, at the FFA Activities Week, held at Penn State, in the meat judging contest, he placed 11th in the state last year. This year he will be attending the activity as a delegate.

His future plans are many and varied.

He expects to expand his farrowing to finish operation, ever improving on his stock and facilities.

He'd like to be named star agri-farmer of the state, while earning his Keystone Farmer degree, and is constantly striving toward this goal. He also hopes that his hog operation will someday be good enough for him to win the state swine proficiency award.

In the farrowing house, which Don also built, the young pigs in the weaning pen bask in the controlled temperature heat. The house also contains two farrowing crates.

He wants to earn his American Farmer Degree and plans to attend the FFA National Kansas City convention next year.

After graduation, he wants to return to the farm, continue working with hogs and generally work with his father. Hopefully, he adds, someday, the two of them can go into partnership.

Thinking of the County FFA group, one big goal he has for the coming year is to somehow get a seminar together, with county wide participation.

"I'd like to have people speak on swine, beef, dairy, soybeans, and corn," he commented. "Hopefully we'd get the students out so that they could learn beyond the classroom, in sort-of an in-depth study."

Thinking of FFA and its work, he noted that he has learned how important keeping records are, and stressed that everyone should keep up to date records.

"You can't keep it in your head," he stated. "You think you can, but you just can't."

He added that he thought it is important to also keep up-to-date on all the latest developments in farming.

"I really love farming," he summed it up. "I just knew that I wouldn't be happy doing anything else."

Garden Spot FFA elects officers

LAMPETER - The Garden Spot Chapter of the Future Farmers of America recently held their annual election of officers. The students that wished to run for an office had been previously interviewed by the active seniors. At the chapter meeting all of the members present voted for one of the people that had been interviewed for that office.

Election results were as follows: President - Jerry Myer, his second term in that office; Vice-President - Gerald Garber; Student-Advisor - Don Brubaker; Treasurer - Fred Musser; Secretary - Darrel Dombach, his second term in that office; Reporter - Brian Shimp, Chaplain - Sue Shenk, and Sentinel - Don Mets, his second term in that office.

Gas mileage will be increased and tire and engine wear are extended by slow, steady acceleration.

Bergland pegs 1979 farm exports at $32 billion

CROOKSTON, Minn. – U.S. agricultural exports are likely to hit a record $32 billion this fiscal year, a gain of almost $5 billion over last year, Secretary of Agriculture Bob Bergland said recently.

"That's over five times what our farm exports were 10 years ago," Bergland said. "It will mean added farm income, more jobs producing and exporting farm products, and another hefty contribution to this nation's balance of trade."

He said the Department's quarterly export outlook, issued May 18, forecasts agricultural exports of $32 billion and imports of $16 billion in the current fiscal year, which ends Sept. 30, for a trade surplus of $16 billion.

"That means $16 billion in foreign exchange will be earned by agricultural trade to be applied to the purchase of oil and the other imports this industrial society needs," he said. "This will be good for the dollar in the international market, where the rise and fall of a currency depends heavily on a country's balance of trade."

The forecast indicates most of the expected 17 per cent growth from last fiscal year's previous export high of $27.3 billion will come from higher export prices. However, gains in volume also are expected for several major commodities, including soybeans, feed grains, rice and tobacco. Wheat volume is expected to be down slightly, but value should be up. Export volume of major bulk commodities is forecast to rise by about four per cent from last year's 122 million metric tons.

Bergland said U.S. agricultural exports will top $30 billion for the first time in the year that also marks the completion of the Tokyo Round of international trade negotiations.

"The agreements reached in the Tokyo round, which will go to Congress this month for approval, will reduce trade barriers and improve trading rules for agriculture," Bergland said. "That will help us to build toward $40 billion in annual exports, and this might come sooner than we think; when I was elected to Congress in 1970 the goal for agriculture was to hit $10 billion a year in exports by 1980."

The Department's report forecast that U.S. agricultural exports to the Soviet Union would increase slightly to about $2 billion and that China would become a billion-dollar customer for the first time. China bought $368 million worth of U.S. farm products last fiscal year.

Cowtown Rodeo lists winners

COWTOWN, N.J. – At the Cowtown Rodeo, on May 26, in the first event of the evening, Stanley Thomas, a cowboy from Woodstown, New Jersey took first place on a horse named "Crasher" among ten bareback bronc riders with a score of sixty-one. Jay Stover rode a bronc called "Toma" for second place while Buck Howard riding "Stoney" chalked up number three position. Fourth place was split for ground money.

Bill Wilds, a roper from Connecticut, took honors for first place with an eighteen and two tenths second timing in the calf roping contest. A Philadelphia cowboy named Charles Markee put his notch in for second place with twenty-one seconds and Bob Roberto with 21.1 and Clay Clement with a 30.5 finalized the third and fourth place positions in this event.

First place for the Saddle Bronc Riders saw Willie Ed Walker from Pedricktown, New Jersey on a bronc called "Black Mt." taking spot with a marking of 59. Dan Aurand, out of Lewistown, Pa. riding a horse called "Tumbleweed" placed, while David West on "Rainbow" took the money for the show position.

Out of eleven contestants in the Steer Roping contest, the four money winners were: Chris Gerhardt from Sicklerville, New Jersey, 12.3 seconds; Jim Hoehn from Little Silver, New Jersey, 16.5 seconds, second place; Charles Bueti, a cowboy from Staten Island, third place with 17.7 seconds; and Stanley Thomas from Woodstown, New Jersey in fourth, with 19.3 seconds.

Twenty-one cowboys tried their hand at Bull Riding with only five contestants managing to stay on for the required eight seconds during the entire evening.

Jimmy Lee Walker stayed with a mean critter called "Everready" for the eight second whistle and the judges gave him a 66 rating making him the first place winner. Chester Lloyd scored a sixty to put him in second place. Stanley Thomas took the show position for riding a bull called "C-1". Cowtown's own Andy Harris rode "Middleworth" racking up a 54 point rating earning.

In the girl's Barrel Racing competition, Lorraine Alexander placed first for running the clover-leaf pattern in 18.18 seconds. Following were Diane Sleeter with a time of 18.83; Judy Clement with 18.95 and Debbie Shienberg chalking up a 19.06.

Saturday's performance was the first of the regular Rodeo season to run through September 1.

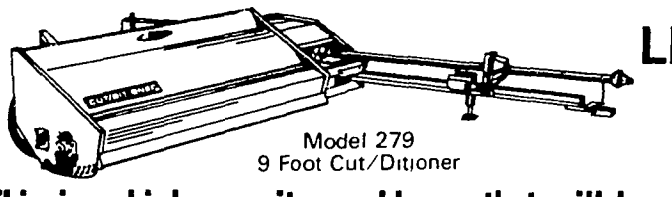
NEW IDEA MODEL 279 CUT/DITIONER



Model 279
9 Foot Cut/Ditioner

LESS MAINTENANCE... MORE PRODUCTION

This is a high-capacity workhorse that will breeze through hay fields at a rate of up to five acres an hour taking a full 9 foot cut. Virtually plug-free, it will handle the heaviest crops under the toughest conditions fast. Produces the kind of hay livestock prefer. It's softer!

Project Clearwater organizer gets USDA award

COLLEGE PARK, Md. - G. Paul Edwards, district conservationist for the Soil Conservation Service in Frederick County, Md., received the U.S. Department of Agriculture's Superior Service award May 23.

At a ceremony in Washington, D.C., Agriculture Secretary Bob Bergland commended Edwards for outstanding leadership in helping local officials carry out an unusually effective conservation program and for his leadership during last August's Project Clearwater.

Edwards was the chief SCS designer of the conservation plan that was installed on a Frederick County farm during Project Clearwater. Over 500 community volunteers helped carry out the plan–the work of five years–in a single day.

A reenactment of the Thrasher field day held in Frederick County 30 years ago, Project Clearwater focused national attention on the water quality problems caused by soil erosion.

Sponsored by the Catoctin and Frederick Soil Conservation Districts, the field day's impact spread far beyond the local area. News of the event was carried nationwide. As a result, similar demonstrations are planned in Tennessee, Georgia, North Dakota, Illinois, and Nebraska.

"Soil erosion is a much more serious situation than the general public realizes," says Edwards. "The crisis is already here. Americans need to change their attitude about the way they treat our resources. We do not have the right to use up soil during our short time on Earth disregarding future generations."

Edwards' interest in soil and water conservation began while he was growing up on a dairy and cotton farm in Charlie, Texas. "The Dust Bowl and great big gully behind our house had as much to do with it as anything," he quips.

Actually Edwards was trained early in soil management practices. Both his father and grandfather were cooperators with the local soil conservation district. And Edwards recalls how as a youngster during the 1930s he helped put in terraces on the family farm.

Before being appointed district conservationist for Frederick County in 1967, Edwards also served in various SCS positions in Montgomery, Cecil, and Wicomico counties.

He now directs SCS conservation efforts in the County by working with interested landowners and over 20 state and county agencies. His office helps farmers plan and design conservation practices such as contour stripcropping, diversions, ponds, waterways, as well as animal waste management systems. It provides soils data to other agencies for use in selecting septic sites, controlling water pollution problems, and for broad land use planning.

Edwards resides in Middletown with wife Penny and sons Paul, Jr. and Scott.

USSR expanding feed capacities

WASHINGTON, D.C. – The Soviet Union is undertaking a rapid development program for the production of mixed feed, according to a U.S. study team which returned from the USSR last month.

A Breakthrough In Forage Cutting-Throwing Systems!

★ **LARGE 117 P S I THROAT** providing a great feeding efficiency guaranteed by a perfected system of aggressive feeding rollers well balanced by strong springs

★ **FANTASTIC BUILT-IN GRINDER** giving back to the knives their original sharpening Mounted on roller bearings, this system uses a standard emery stone

★ **CYLINDER AND FAN COVER** can be removed easily, giving access for knives grinding or any maintenance work

★ **SICKLE BARS OSCILLATING PITMAN** drives the sickle bars of all attachments and supplies 1,200 strokes per minute thus insuring the nicest cutting for any kinds of crops Having a high carbon steel shaft same is equipped with roller bearings assuring almost an indefinite life

★ **HEAVY-DUTY UNIVERSAL JOINTS:** transmit the tractor power to the cutter head by passing through a strong 90 degrees angle transmission box In some exceptional cases, these joints are protected by safety bolts which will shear off if ever the cylinder is overloaded Such rugged joints insure a constant efficiency to the cutterhead, feeding rollers and fan

★ **CONTROL LEVERS:** all control commands of the forage harvester are very easy to handle

★ **ELECTRICAL CONTROL (OPTIONAL)**

★ **ATTACHMENTS ARE CONNECTED BY AN HYDRAULIC CONTROL** therefore, they can be raised or lowered thus allowing an easy adjustment of all attachments This system is very compact, smooth and efficient

94th Holstein convention to be held June 26-27

DENVER, Colo. — The benefits of a new sire type evaluation and the details of farm estate planning will be featured at early-bird sessions at the 94th annual convention of the Holstein Association at Denver, Colo., June 26-27.

The two educational seminars for breeders will begin at 8:30 a.m. each day before the convention business meetings.

Dr. Lynn Johnson, director of research for the Holstein Association will open the first session on Tuesday with a discussion of the benefits of the BLUP procedures for evaluation of sires for type.

Johnson's topic is timely since Best Linear Unbiased Prediction (BLUP) will be used to calculate type transmitting abilities of bulls in Volume II, Registered Holstein Sire Summaries to be published in July.

An explanation of the advantages of BLUP over the present herdmate PDT system will be outlined. "BLUP" establishes a common ground from which a ranking of competitive sires is possible," Johnson said. It permits more information to be considered in the evaluation, he said.

In addition, Johnson said, the new procedures take into account these factors:

Daughters of each sire are compared with daughters of other sires in the same herd, year, and season.

Adjustments are made for the genetic competition faced by daughters of a sire.

Differences in the ages of daughters are considered and appropriately adjusted in all sire comparisons.

Sire evaluations are adjusted according to the amount of information available (repeatability).

Johnson, who becomes director of research July 1, has a broad background of research and practical experience in genetics, statistics and computer sciences.

While he was at the University of Guelph, Ontario, Canada, he was directly involved with the national dairy sire evaluation program for production traits there. In his new position with the Association, he will concentrate on development of advanced technology that relates to improved genetic evaluation procedures.

Darrell Baugh, a farm estate planning expert, will show breeders how they can best protect their farm investment from excessive taxes and combat inflation in the years ahead.

In a session at 8:30 a.m., Wednesday, Baugh will discuss how the family assets can best be served by a trust operated for the benefit of the partners in a family partnership.

Under the title, "The Family Farm — New Concepts or Last Rites," he will compare the probable estate costs of a poorly planned estate now with the probable costs of the same estate, some 25 years later. These figures will be compared with the costs that result from a partnership/corporation for the same family stituation.

"Estate planning makes an orderly transferral of property from one generation to the next," Baugh says. Due to the new tax laws and the inflated value of land, cattle and other property, it takes more than a will to smoothly administer an estate, he said.

To plan for future generations, Baugh believes that these steps need to be taken now—

Make a real effort to plan your affairs.

Re-think the way you own property.

Re-think the way you operate your farm.

Hire competent help, specialists in financial planning, to chart the future.

"We intend to show that no matter how fast farm values may be increasing, the estate taxes and costs are rising faster. The only way a family farm will survive to the next generation is going to be through competent, creative estate planning," Baugh said.

Baugh is president of The National Estate Planning Institute of Boulder, Colo. He holds a master of science degree from University of Colorado and is a chartered life underwriter.

Census 'round up' launched

WASHINGTON, D.C. – A drive to round up reports that have not yet been returned from farm households in the 1978 Census of Agriculture was launched by the Bureau of the Census.

Bureau officials called the drive a "special effort to provide statistical results to the Nation's farmers and other users of census data as early as possible."

Most farm operators first received report forms last January, and most have, by now, completed and returned them. Although the rate at which reports have been returned has exceeded the pace of the last farm census, some farmers and ranchers have not sent in their reports.

"The completeness and accuracy of this important agricultural census depend upon each individual filling out the report form received," said Orvin Wilhite, Chief of the Bureau's Agriculture Division. "I am sure that farmers and agricultural leaders want their county and State totals to be as accurate and useful as possible."

The farm census is the only government or private method for gathering and reporting agriculture information on a county-by-county basis for the entire Nation, Wilhite noted.

Important decisions will be made by farmer organizations, marketing associations and co-ops on the basis of information in the farm census, he said. Census figures also are widely used by many other organizations, both public and private, on which farmers depend for services, supplies, and equipment.

Operators who neglect to fill out and return their reports, Wilhite said, are doing themselves and all other operators a disservice. They impair the accuracy of the statistics for their area and may even reduce their county's share of funds allocated for research and other agricultural purposes, Wilhite said.

A few landlords and other persons who did not operate farms in 1978 may have received report forms, and others may have received more than one form, each addressed differently. Wilhite explained this as follows:

"Each report that the Bureau mailed was assigned its own census file number (CFN). We need a response for each CFN so that the record can be cleared. Anyone who did not farm in 1978, for whatever reason, and anyone who received extra reports with different file numbers should note these facts on the forms and return them so that additional followups can be avoided."

The Bureau realizes that some farmers and ranchers need reassurance that their report is confidential. "By law," Wilhite said, "the report may be seen only by sworn census employees, and used only to tabulate totals for your county, State and the Nation."

Cattle gain more on inoculated silage

DES MOINES, Iowa — Cattle fed silage inoculated with a bacterial culture to improve fermentation showed a 15.8 per cent gain in feed efficiency in a recently-completed Kansas State University study.

The 78-day test conducted by John R. Brethour at the Fort Hays experiment station compared gains of cattle fed ordinary silage and silage inoculated with two bacterial cultures. The greatest improvement in efficiency came from silage treated with Sila-Bac (R) brand silage inoculant, a product of Pioneer Hi-Bred International, Inc.

Forage sorghum was put up at 66 per cent moisture in upright, concrete stave silos. Silage in one silo was inoculated using one pound of Sila-Bac silage inoculant per ton of forage; no treatment was applied to the control silage.

Results of the first phase of the Fort Hays experiment were announced at a field day on April 27. Copies of the complete report are available from Kansas State.

Treatment	
Number of head	
Initial wt., lbs.	
Final wt., lbs.	
Daily gain, lbs.	
Avg. daily ration, lbs.	
Sorghum silage	
Supplement (1)	

(1) Includes 2 lbs. rolled m premix and .08 lb. ammonium

The .27 pound greater average daily gain for Sila-Bac-inoculated silage compared to the average of the controls amounts to a 15.8 per cent improvement in feed efficiency. This improvement would result in $7.77 added return per ton of silage fed, assuming 70 cent cattle and $1 per ton for inoculant.

Brethour cautions that, "There is so much difference among silage preservatives being marketed that it would be difficult to transfer these results to other brands."

The research also showed improved bunk life or keeping quality for inoculated silage. When silage is removed from the silo and exposed to air, fermentation may begin again unless the feed is eaten immediately. This refermentation may cause additional nutrient losses.

To compare the bunk life of inoculated and untreated silage, the feed was held in wagons for 16 hours after unloading from the silos. Outside air temperature was 30 degrees Fahrenheit. Untreated silage temperature rose from 70 degrees to 96 degrees Fahrenheit during this period, indicating refermentation and loss of dry matter and nutrients.

Treated silage went from 46 to 44 degrees Fahrenheit, an indication of high stability and no refermentation which could reduce feed value.

Additional tests are underway at the Kansas State University Manhattan station and at the Pioneer Hi-Bred International, Inc. animal research station at Durant, Iowa. Reports of these tests are expected in about six weeks.

Here is a substitute for grass

UNIVERSITY PARK – If you have trouble growing grass under shade trees or if you have a steep terrace or slope that needs the strength of a muscleman to struggle with a lawn mower, then a ground cover is one of the answers to your problem. Ground covers are low plants that spread quickly and are used where lawn grasses do not grow well or where grass is hard to maintain. According to James J. McKeehen, Delaware County Extension Agricultural Agent more than 200 plants can be used as ground covers but ivy, pachysandra, and periwinkle (myrtle) are the most popular and known as the "big three." Now is a good time to buy and plant ground covers. If you're working under the trees where the ground is dry and there are plenty of roots, dig a picket, fill it with a mixture of good soil and peat moss, and plant the ground cover in clumps or single plants. Next spring spread a granular 5-10-5- fertilizer. On terraces, slopes or banks, mulch the area first with salt hay or straw. To keep the mulch from blowing away, tie it down with string or baling twine in a crisscross pattern and anchor it to pegs, then make your pocket and plant your plants. If preparing a newly-graded bank, use the same procedure as you do when planting annual flowers. Spacing of plants depends on their type, and how quickly they will spread. One plant, or clump, every 1 to 4 square feet is a good guide. Closer spacing will cover the area quicker, but it will cost more.

STAR

"ENERGY-PAK"

IS OXYGEN CONTROLLED

*WHAT IS AN "ENERGY–PAK" OXYGEN CONTROLLED FEED STORAGE SYSTEM?

The "Energy-Pak" "Oxygen Controlled" Storage System includes a solid, steel reinforced concrete wall with a tough epoxy coating on the inside wall and a cone shaped concrete roof All access openings to the Silage Storage area are round and fitted with air-tight gaskets These round openings are easily clamped tight These features help to control and limit the amount of oxygen that comes in contact with the feed

In operating an "Energy-Pak", prime importance is placed on closing the silo after each filling and feeding operation Proper use of this system significantly reduces the oxygen content in the silo and results in a more ideal condition for maintaining the quality of the feed put into it

Ray Reiker, vice president and general manager of the Agricultural Division, The DeLaval Company, presented awards to Mr. and Mrs. Dennis Graham and Mr. and Mrs. Benjamin Markle, right.

De Laval honors dealers

HARRISBURG – Mr. and Mrs. Benjamin Mearkle of Harclerode's Dairymen Specialty, New Paris, and Mr. and Mrs. Dennis Graham, of Graham's Dairy Supply, Greensburg, were recently honored as members of The De Laval President's Honor Council. Ray Reiker, Vice-President and General Manager, Agricultural Division of The De Laval Separator Company, Poughkeepsie, New York, presented the award.

The award was presented at the Posada Vallarta Hotel in Puerto Vallarta, Mexico. Both couples were in Puerto Vallarta for five days of special business advisory meetings with the top executives of The De Laval Separator Company.

Membership in the President's Honor Council is earned by outstanding achievements in sales and performance as a De Laval Dealer. Members of the President's Honor Council will serve for one year on the advisory council to the De Laval Agricultural Division Management Group.

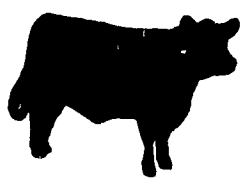
Tax credit offered at LeHi

ALLENTOWN — The Lehigh Valley Cooperative Farmers Association, (LeHi) announces the availability of a .025 tax credit to members. This comes about as a result of the dairy cooperative having chosen to allocate to its members its investment tax credit.

According to vice president John York, the investment tax credit for members is one of 10 beneficial points of the LeHi program.

Farmers can utilize the tax credit as individuals under newest interpretations of the codes set forth by the Internal Revenue Service (IRS).

Details can be secured by contacting LeHi at 1000-1160 North Seventh Street, Allentown, Pa. 18001.



Thomasville 4-H meets

BAIR - The monthly meeting of the Thomasville 4-H Club was held May 22 at the 4-H center near Bair. A program was presented by the Society for Juvenile Diabetes Research.

Dr. Philip Eppley, head pediatrician at Memorial Osteopathic Hospital, explained the signs and conditions of diabetes.

Jeanne Erb and Ann Ketterman spoke about the projects and goals of the organization.

Reports were given by Nancy Eisenhart about Family Fun Night; Robert Haskins, Rural Life Sunday; Shane Seidenstricker, Homewood bingo; Carol Haskins, Pennsylvania Junior Horticulture Association; Mike Welsh, Demonstration Day; and Bev Eisenhart, petting zoo at the York Hospital Fete.

Farm Women Societies

Lancaster Co. Society 5

Lancaster County Farm Women Society 5 held their May meeting at the Heintzleman Art Center, Manheim, with Laura Frey as hostess.

The Society toured the Center and viewed the art. Seventeen members were present. Elizabeth Hartenstein will be the Society's visitor for June.

The Society is planning to have a bazaar table at the Homemakers Day meeting in October. On June 7, the Society will be entertained by Society 15 at the Black Rock at 12 p.m.

On June 21, the Society will be going to Conestoga View.

Speaker for the meeting was Mrs. Bryl Hawn, Manheim. she spoke on the crafts at the Center.

The next meeting will be on June 30th at the Bird-in-Hand Restaurant. The hostess will be Esther Mentzer and Esther Mussleman. Speaker will be Mrs. Becker. Her subject will be "The Amish People."

Lancaster Co. Society 31

Lancaster County Farm Women Society 31 met at the home of Mrs. Victor Brinton, Peach Bottom, with Mrs. Curtis Akers as co-hostess.

Members were reminded Society 10 will be entertaining their Society on June 2, 12:30 p.m.

Donations were made to the IFYE program, Dairy Princess Pageant and Meals on Wheels.

The county projects were brought before the members for vote. Society 31 voted to support Teen Haven.

Becky Buckwalter was the guest speaker. She talked on herbs and spices.

The next meeting will be a family picnic at Mrs. Ben Wenger's home, June 24 at 12:30 p.m.

Lancaster Co. Society 30

On May 21, Lancaster County Farm Women Society 30 entertained Society 20 at the Lancaster Farm and Home Center.

After the business meeting conducted by Mrs. Carlo Weaver, president, the Society was given information on eggs. They also saw a film from Pennfield Corporation by the "Omelet King." The King, Scott Barrows, demonstrated how to make omelets and crepes after which each member made their own.

The next meeting will be held on June 23, 6 p.m. at Stonebridge Farms Friends and husbands are invited.

Del. scholars to attend PAFC institute

NEWARK, Del. – The Delaware Council of Farmer Cooperatives has selected ten young Delawareans for expense-paid trips to the Pennsylvania Association of Farmer Cooperative Summer Institute, to be held in July at Shippensburg State College. Young people from Delaware, Pennsylvania, New York, and New Jersey will spend four days studying the cooperative system of marketing at the Institute.

Those attending were selected in testing competition after a training session, according to Dan Harris, spokesman for the Delaware Council of Farmer Cooperatives.

Chosen to attend are: Janet Cannon, Bridgeville, sponsored by Southern States Seaford-Bridgeville Coop., Inc.; Gina Wank, Newark, sponsored by Agway, Inc., Newark Store; Jonathan B. Harcum, Laurel, sponsored by Interstate Milk Producers Coop., Inc.; Pamela Knopp, Harbeson, sponsored by Southern States Laurel Coop., Inc.; Sherry Warren, Smyrna, sponsored by Agway, Inc., Middletown Store; Stephanie Truitt. Lewes, sponsored by Southern States Coop., Nassau Service, Inc.; Beth Ridley, Dover, sponsored by Agway, Inc., Dover Store; Wayne Carlisle, Dover sponsored by Eastern Milk Producers Coop Association Inc.; Edward Jestice Laurel, sponsored by Agway, Inc., Frankford Store; and Kathie Dickerson, Seaford, sponsored by Southen States Coop. Georgetown Petroleum Service, Inc.

Of the ten who will be attending the Pennsylvania Institute, four will be selected to go on to the National Institute for Cooperative Education which will be held in August at the University of Missouri.

USDA is predicting a heavy grasshopper infestation this Summer on many ranges in the West. Last year's grasshoppers laid a great number of eggs and spring weather will determine the survival rate. Cool, wet weather brings disease and fungus to young grasshoppers and cuts down on the number that survive.

USDA is working with ranchers and treatment programs will be launched when grasshoppers reach eight per square yard. Under the cooperative federal-state-rancher program, the cost of aerially treating private land is divided equally three ways.

Conservation corps to be continued

HARRISBURG – The Department of Environmental Resources' Office of Resources Management today announced that a $3,173,915 grant from the Federal government has been approved for the continued operation of the Young Adult Conservation Corps program in Pennsylvania.

The program, administered by DER, offers employment for approximately 650 young adults, between the ages of 16 and 23, in conservation related work opportunities at various locations throughout the Commonwealth.

Participating in the program, which provides 171 non-residential and two residental work sites, the latter complete with dormitories and dining facilties, are DER's Bureaus of State Parks and Forestry.

Also participating are the Pennsylvania Game Commission, the Pennsylvania Fish Commission and various local governments.

The Young Adult Conservation Corps is open to people of all social, economic and racial classifications, regardless of sex. To qualify they must be in the 16 to 23 years age bracket, unemployed, a citizen or lawfully admitted alien, and out of school. Short term Summer employment is not permitted.

Persons interested in the program are to contact their local Bureau of Employment Security Office.

Delaware bankers go to farming school

NEWARK, Del. – It's back to school for 18 members of the Delaware Bankers Association early next month. But they'll be studying farming, not banking, at the special agricultural school that meets June 5, 6, and 7 at the University of Delaware under the sponsorship of their Association and the Delaware Cooperative Extension Service.

Purpose of the school is to make the loan officers more aware of what it costs to farm in Delaware today, so that the next time a farmer comes to one of them asking for a loan to build a new broiler house or install irrigation on 100 acres of field corn, they'll understand just why he needs so much money.

This is not the first time the Extension service has conducted special training programs for Delware lending insitutions. But unlike the earlier one-day programs, this school will cover two, three-day periods over the next two years, thus permitting a more in-depth analysis of the economics involved in local farming.

This year the bankers will study livestock (poultry, dairy, and swine) production on Delaware farms. Next year they'll look at field crop, fruit and vegetable production in the state from the farmer's point of view. Teaching will be done by a combination of Extension specialists and researchers from Delaware and other universities, plus industry representatives. There'll even be a telelecture by an Indiana hog farmer

Classroom sessions will include an overview of Delaware agriculture from the standpoint of soils, crops and livestock raised, and the general financial stability of farm business here today. There will also be a report on the results of a recent Sussex County input-output study conducted by agricultural economists at the University; and discussions on what it takes to get started in farming, ways to acquire and allocate resources, and the management of resources and risk in the farming sector.

The group will also spend a day touring broiler, dairy, and swine farms in lower Kent and Sussex Counties.

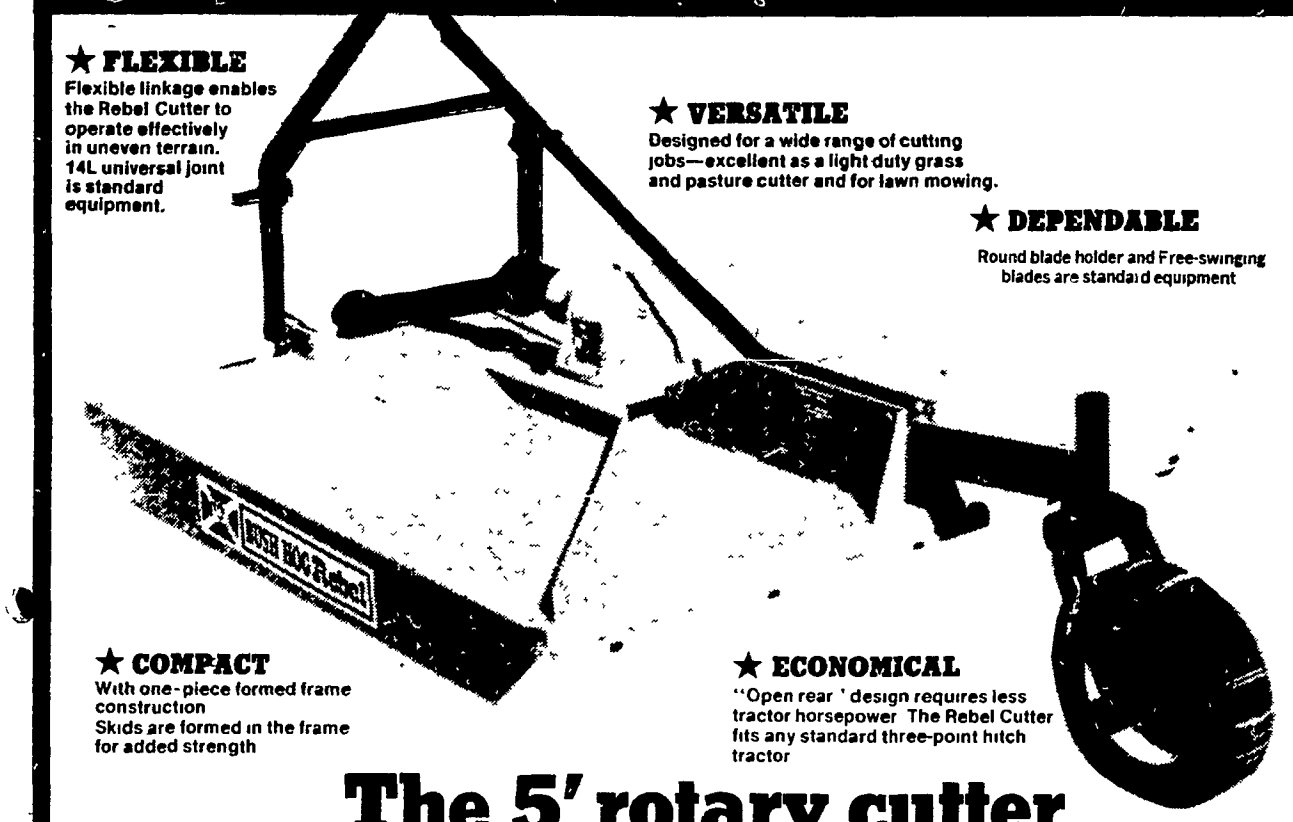
Historically the farm loan market has had very low default rates on loans.

BUSH HOG®
Rebel

★ FLEXIBLE
Flexible linkage enables the Rebel Cutter to operate effectively in uneven terrain. 14L universal joint is standard equipment.

★ VERSATILE
Designed for a wide range of cutting jobs—excellent as a light duty grass and pasture cutter and for lawn mowing.

★ DEPENDABLE
Round blade holder and Free-swinging blades are standard equipment



★ COMPACT
With one-piece formed frame construction
Skids are formed in the frame for added strength

★ ECONOMICAL
"Open rear" design requires less tractor horsepower The Rebel Cutter fits any standard three-point hitch tractor

The 5' rotary cutter that anyone can afford!

From the southland where rotary cutting began, and from the company that started it all . the Bush Hog Rebel Cutter has risen!

Compact and smooth in design, the Rebel is the perfect answer for the control of pastures, grassland and lawns It's the most economical 5-foot model in our line—a true "rebel" against high prices!

your sow is a pig factory

A sow has the tremendous job of converting feed into big litters of thrifty pigs *twice a year*. She must supply enough milk to give her pigs a good start in life and build herself up to perform this task again.

Nature has given the sow a safety valve . . . the ability to *resorb* developing embryos if she doesn't get proper care and nutrition. Studies show 20% to 33% of all pig embryos conceived are resorbed during gestation. Pig embryos grow fast. During the last 12 weeks of gestation, each healthy embryo increases in size 800 times!

Years of continuous Purina Research have built and improved Purina Sow Chow . . . a highly-fortified ration that gives a sow the nutrients she needs during gestation and nursing.

Sows that farrow and raise big litters will make more money for you. That's why thousands of hogmen follow Purina's Sow Feeding and Management Program to help them send eight and nine pigs per litter to market. Let us tell you more about it.

Md. farm machinery sales tax to be removed

ANNAPOLIS, Md. — Maryland Secretary of Agriculture Wayne A. Cawley, Jr. says agriculture, thanks to a stroke of Governor Harry Hughes' pen, recently passed another milestone on its road to true economic equality.

"Economic equality may sound a bit fancy, but that's what the removal of the two per cent sales tax on farm machinery is. Agriculture, when it comes to the tax man's thinking, is now going to be treated like other manufacturing enterprises.

"Farmers no longer will have to pay $1000 sales tax to the state on a $50,000 combine which is just as much a piece of business investment as is a lathe, blast furnace, railroad car, transformer, store fixture and so on.

"Agriculture for years has been pleading with the General Assembly to remove this vestige of tax discrimination but for some reason the proposal always became lost in the shuffle.

"This year, thanks to Governor Hughes and a host of persistent legislators, the issue was brought to the forefront, kept there through good debate, and was passed.

"Therefore farmers come July 1st of this year won't be paying sales tax on tractors, combines, plows, grain dryers, chicken house equipment, storage bins, silo loaders, milking machines and the countless other items they buy as part of their business investment.

"The old law had many of these items spelled out, had a two percent sales tax rate set on them and in general was a mess that worked to make agricultural investments sort of a second class business citizen.

"The new law is fair, simple and uniform. All persons engaged in agriculture in Maryland owe a real round of thanks to Governor Hughes and the 1979 session of the General Assembly," Secretary Cawley said.

PEMA meeting slated

LANCASTER — Dr. Ed Mallinson, chief of the poultry disease section of the Bureau of Animal Industry, will address the next meeting of the Pennsylvania Egg Marketing Association (PEMA) on Friday, June 8. It will be held at the Treadway Resort Inn, just off Route 30 at the Route 272 Exit (Oregon Pike).

Mallinson will discuss the consequences and prevention of poultry disease outbreaks. He will tell what to do and what to look for when an emergency occurs. "This would be an excellent time to bring your flock managment personnel along," comments Ed Lawless, secretary of PEMA.

The meeting begins with a dinner at 7 p.m. Reservations indicating attendance should be secured with Ed Lawless, 4210-A Sussex Drive, Colonial Park, Harrisburg, Pa. 17109.

Make your new home a 'NEW' home from the start.

NEW stands for the National Energy Watch — a nationwide program set up by electric utilities to recognize homes that are energy efficient.

If you're planning to build, the time to make your home an energy saver is while it's under construction. NEW provides guidelines to assure your home will be energy efficient when it's completed.

Doesn't matter if your home is in the blueprint stage or already under construction, just call us to find out NEW's requirements. Our residential consultant also can answer questions on additional energy savings and suggest other improvements.

And, NEW is not just for "new" homes...older ones can qualify, too! Ask for a PP&L residential consultant to come out and give your home a "NEW" inspection.

Don't delay...join the National Energy Watch today.

PP&L Award — Energy Efficient Home

*If you're building an electrically heated home, ask about our **Energy Efficient Home Award (EEHA)** program in cooperation with area builders. EEHA homes automatically qualify for NEW membership*

NCA comments on proposed brucellosis program

WASHINGTON, D.C. - The cattle industry cannot afford a false start in the proposed new brucellosis program. Flexibility and sound judgment must be used, and the program must be adequately funded. Otherwise, it will "suffer many of the setbacks and stagnations which have plagued such efforts in the past."

This is the point that was made by the National Cattlemen's Assn. in testimony before the agriculture subcommittee of the Senate Appropriations Committee. The subcommittee held a special hearing on the brucellosis eradication program. The objective was to reexamine the old program and to determine industry thinking, following issuance by the U.S. Department of Agriculture of proposed changes in the Brucellosis Uniform Methods & Rules.

The hearing was prompted in part by earlier NCA testimony that inadequate funding of the proposed new program would be self-defeating. (Even though changes and improvements have been proposed, the President's proposed budget for fiscal 1980 specifies the same funding as in 1979—and considerably less than requested by USDA.) If the program is not adequately funded, it was noted, the government might as well forget the eradication objectives.

Testifying on behalf of NCA was Jack Dahl, chairman of the Animal Health Committee. He was accompanied by Burton Eller, NCA staff member.

Reviewing the past efforts, Dahl cited controversy and impractical regulation, with many cattlemen feeling that the "cure was worse than the disease." In the future, he noted that there must be more flexibility, and sound judgment must be used.

Dahl made these observations: The cattle market depends on rapid, efficient movement of many animals through one location. Any disease control or eradication program must recognize this fact.

Parts of the old program did work; it helped clear up a great deal of active infection. The Market Cattle Inspection program needs to be retained and improved.

The brucellosis program has been most effective where individual producers and states developed workable programs of their own within the UM&R guidelines. The technical commission strongly supported this principle. NCA also endorses the principle of individual state and producer flexibility.

Producers must want to control and eradicate brucellosis before such can be accomplished. They must be able to justify participation economically. As the new UM&R's are released, there should be a major educational campaign, geared to building enthusiasm for control and eradication, rather than threatening producers with burdensome regulation. With the industry beginning the herd build-up phase of the cattle cycle, there should be more education among persons entering the business for the first time.

Producers in all areas should be told now that they should calfhood vaccinate their heifer calves in 1979 and for most of the next several years, so that they can sell freely in the marketing channels. Adult vaccination is imperative in high incidence areas

The principle of adjusting indemnity to the moving market value of the animal is a basic necessity in any new eradication program.

NCA is concerned about some recommendations in the commission report, such as legal warranties and individual animal identification. NCA also is concerned about certain provisions regarding "S" branding of unknown status cattle and some of the dealer licensing requirements in the proposed UM&R revision.

The industry cannot afford a false start on a new program. All the pros and cons on each point of the UM&R must be addressed. Then everyone must be dedicated to maintaining needed flexibility and sound judgment. Finally, a new effort must be adequately funded, to provide optimum efficiency. Otherwise it will not succeed.

Delaware Dairy Princess sought

NEWARK, Del. – Entries are now being accepted for the Delaware Dairy Princess Contest, a promotional activity sponsored by the Delaware Dairymen and related industries. Deadline for entering is June 8.

Contestants must be Delaware residents between the ages of 16 and 25 who have never been married. They must belong to 4-H or FFA or have lived on a dairy farm. Contest finals will be held on Wednesday, July 25, at the Delaware State Fair in Harrington.

Finalists will be expected to participate in a milking contest, take a written test on dairy production and attend an expense-paid, two-day school for dairy princess contestants during June.

The winner will be chosen on the basis of her score on the written test, score on the milking contest, personality, charm, poise, grooming, beauty of face and figure and public speaking.

In addition to receiving $300 in cash, the Dairy Princess will be expected to make a number of personal appearances during the year, attend the Dairy Herd Improvement Association meeting and participate in other dairy-related activities as long as it does not have a detrimental effect on her studies or occupation.

Applications for the contest may be obtained from local county Extension offices or from Owain Gruwell, Delaware Dairy Princess Committee Chairperson, Hollyrill Farm, RD 1, Box 223, Felton, Del. 19943.

Farmer-owned reserve wheat released

WASHINGTON, D.C. – Wheat in the farmer-owned reserve was released for redemption, effective May 16, by Ray Fitzgerald, executive vice president of the Commodity Credit Corporation (CCC). Farmers may sell their reserve wheat after repaying their CCC price support loans.

Release of the reserve doors not require farmers to redeem or sell their grain at this time.

Fitzgerald said the national average market price for wheat is $3.31 per bushel. The price level at which the commodity is released from the reserve is 140 per cent of the $2.35 national loan rate or $3.29 per bushel. More than 400 million bushels of wheat are in the reserve.

Farmers with grain in the reserve receive storage payments annually in advance from the U.S. Department of Agriculture. Upon repayment of the loan, farmers can keep the storage payments earned through the date of repayment.

On June 30, the Department will review the average price for wheat to determine if the release authorization should remain in effect. If release continues, storage earnings will stop in those states where the price remains above the release level.

Data used by CCC in determining the release levle include five-day average prices as reported by the department's Agricultural Marketing Service which show prices bid by buyers at selected markets and a month-end report of prices received by farmers issued by the department's Economics, Statistics and Cooperatives Service. This report shows the previous month's average price and the current mid-month price.

Chicago, Portland, Kansas City and Minneapolis are the daily markets reviewed by CCC for wheat. The five-day average of these market prices, adjusted to reflect prices received by farmers, was the basis for today's action.

1. Ron Kauffman, Holtwood, 1975 Ford, 160-9; 2. James Miley, Preston, Md., 1978 Ford, 131-3; 3. Jerry Garver, Paradise, 1968 Ford, 004-6.

9000 pound open

1. Greg Manners, Ringoes, N.J., 2-440 Dodges, 273-7; 2. Ams Stauffer, 250-3; 3. Dick Zimmerman, Mt. Joy, 3-440 Dodges, 223-5.

Beef cook-off announced

ALLENTOWN -- The fourth annual Pennsylvania Beef Cook-Off will be held July 20 at the Hess Department Store in Allentown.

The event is sponsored by the Pennsylvania Beef Council, Pennsylvania Cattlemen's Association, and Pennsylvania Department of Agriculture.

According to Dr. Lowell L. Wilson, professor of animal science at The Pennsylvania State University, competition is open to all residents of Pennsylvania who do not have professional status in cooking. Contestants can only use original beef recipes requiring at least two pounds of beef.

From among the recipes submitted, a maximum of six entries will be selected for the final phase of the contest, which will include actual preparation of the selected dishes on July 20.

The winner of the State Cook-Off will be eligible to participate in the national event to be held in Omaha, Neb., in August.

Complete details for entering the contest can be obtained from the 1979 chairman, Mrs. Mary Wilson, 862 Webster Drive, State College, Pa. 16801.

If the 110 million overweight Americans went on and stayed on a diet, that much less food would mean 1.3 billion gallons of gasoline saved in the initial year-based on the amount of energy required to produce an average human-food calorie, according to Reader's Digest.

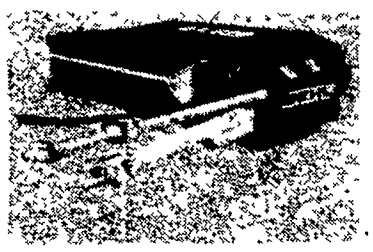
Looking for Big H.P. to turn that Forage Chopper? Try a Case 4-Wheel Drive w/P.T.O., front wheel steering to operate like a conventional 2-wheel drive tractor. Don't limit yourself to big H.P. just for P.T.O. Get a tractor that can handle big P.T.O. plus large tillage equipment.

Just call for a free demonstration - 3 Models in Stock.

NEW GEHL MOWER CONDITIONERS



Better Than A Haybine
- ★ Full Floating Machine
- ★ Heavy Duty Rock Guards
- ★ In Stock: 9 ft. and 7 ft. Models

- **3½" reel tine spacing:** Instead of conventional 4½" tine spacing, Gehl reel tines are 3½" apart They sweep the cutterbar clean twice every revolution, eliminating build-up and hairpinning
- **'Leaf-saver' rolls:** Gehl mower conditioners use conditioning rollers, not crimping rollers The upper steel and lower rubber rollers are set close, but never touch, to gently crack the crop stem, speeding drying, but minimizing valuable leaf loss Upper roll is set ahead of lower roll to act as secondary reel The result to you is fast drying, high protein hay

New Gehl 9 ft. Model only $4300 plus cylinders and hoses
New Gehl 7 ft Model only $3700 plus cylinders and hoses

GET READY FOR THE HAYLAGE SEASON WITH A GEHL CHOPPER.

Several Models In Stock For Immediate Delivery Call us soon

HAVING PROBLEMS BLOWING HAYLAGE? TRY THE GEHL SUPER BLOWER - TWO BLOWERS IN ONE!

No more waiting in the field for the box to come back. The 99 ends silo bottlenecks. It matches the round trip speed of your best forage box. Most self-unloaders won't unload fast enough for it.

When compared to conventional blowers, the FB99's twelve staggered fan blades, six on each side of the rotor, actually give you two blowers in one. The timed delivery of material from the alternate paddles provides maximum use of available space in the nine inch pipe. Result is increased capacity without increasing pipe size. Alternate paddles provide a steadier flow of air and material. Pressure and velocity is maintained as material is blasted up the pipe. No gaps. No slowdowns.

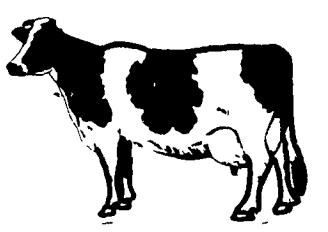
WITH SPRING BRINGING ON A NEW LACTATION OF COWS . . .



NOW IS THE TIME TO CONSIDER THE BODMIN NU-PULSE MILKER!

The Single Hose Milker That Has No Pulsated Vacuum Line

- Sells for 30% less than any other Milker System.
- Save 70% in operation cost.
- Guaranteed 5000 cow milking per set of rubber liners (up to 9000 reported).
- Can be used on all milking systems giving you complete 360° visibility.
- Minimizes cow stress.
- Eliminates electrical pulsators, controllers and pulsation lines.
- Eliminates milker fall off and inflation creep.
- Milks at 10 to 12.5 inches of mercury vacuum at teat end.
- ★ This is an excellent Pail Milking Machine for Amish Use.

The Tractor Specialist sells more "up-time"

When the farmer is ready, his tractor had better be. That's one reason a Case dealer franchise makes extra good sense

As a Case dealer, you're the Tractor Specialist You sell and service the best in farm tractors. And you are backed by an industry first: Assured Availability. It means that, during warranty, if a tractor bought from you isn't ready to go you can offer your customer free use of a replacement. And Case will back you up Proof that when a Case dealer needs help, we do something about it.

You could be planning a bright future as your area's Tractor Specialist
You could also consider our light construction equipment - - Write or call for full information on the Case dealer franchise.

THE FOLLOWING IS AN EXPLANATION OF TERMS USED IN DESCRIBING TRACTORS

EXCELLENT: Recently purchased Limited use Probably shows some evidence of handling and use, but in practically new mechanical condition Under 1000 Hours

VERY GOOD: In exceptionally good mechanical condition May have been overhauled or may never have been used enough to require oyerhaul

GOOD: No known mechanical defects except any that may be described In operating condition, but may have some worn parts that will need repair or replacement soon

FAIR: Has seen considerable service and may require general overhaul soon May be old or may have suffered hard use.

POOR: Has seen hard service Is worn and needs repairs

★ NOTICE ★

These categories of condition are believed to describe the equipment and have been conscientiously set forth by the owner. The equipment is available for public inspection and the foregoing is merely a guide. The condition as set forth on each piece is in no way a warranty or guarantee, actual or implied.

H1240
V-Rake-Tedder combination
20 Ft. Working Width

Vicon's Trapeze incorporates two Acrobat frames joined together for a working width of up to 20 feet, producing a windrow five feet wide — just right for big balers. A 35 HP. tractor supplies all the power needed.

Best of all, Vicon's Trapeze is the lowest priced V-Rake on the market today.

GOT TORQUE AMPLIFIER, CLUTCH AND PRESSURE PLATE PROBLEMS WITH YOUR IH TRACTORS?

There is a company in the West that has been rebuilding T.A. units for several years now and having excellent results. The basic reason for their success is the sprag clutch they use. In the areas where they have been selling, they even have IH dealers that use this unit almost entirely.

(1) They feel this sprag clutch is giving less problems than even IH's new beefed up unit because of the design of the sprags.
(2) This unit can be bought as individual parts which is many times all you need or as a complete renewed unit ready to set in your tractor.
(3) They have a warranty up to 2000 hrs., or 3 years . . . and . . .
(4) They don't cost any more and to most buyers they are costing less than from the big company. They offer same day shipment by UPS or Greyhound bus. They also have a program on rebuilt Dynalife clutches and pressure plates.

If you want more information write me and I will get the literature to you. Raymond B. Leaman, RD #1, Willow Street, Penna. 17584.

GALLAGHER FENCE CHARGERS
Far more effective than the best American made fence chargers, the Gallagher Fence Chargers from New Zealand come in three plug in nodles, The Super Power 60. The Bev II. and the MPE. The BEV II fence charger will charge 5 miles of single strand waist high fence that is buried in rain soaked grass or 40 miles of weed free fence. The Bev II makes electric fencing practical because it doesn't short out easily. It does not require weed cutting, does not melt insulators nor burn fence posts. It features a unique patented output circuit which controls the voltage being applied to the fence. When additional fence is added or weeds touch the fence, the patented circuit floods the fence with electricity before weeds have a chance to drain the power. It is safe and will out last any other fence charger. It carries a one-year warranty and a 30 day money back satisfaction guarantee. For more information call 215-683-3825 (days) or 215-756-6359 or write to:

Jack Takes A PUNCH At The Energy CRUNCH

It's simple ... the solution to high gasoline prices and fuel shortages is better mileage. The answer to inflation is lower prices. Jack's got both and he's got a lot of 'em right now.

THINKING OF SELLING "YOUR FARM"?

This is certainly an important decision raising many questions -

What is a fair price ? How to find a "QUALIFIED" buyer ? When should I sell ? What about tax considerations ? The farm specialists of G.I. Ebener & Associates with many years of dairy farming experience and other agricultural involvement, can help you with answers to these and other important questions. Selling your farm is one of the most important decisions of a lifetime and merits professional help. Write or call us to discuss your objectives

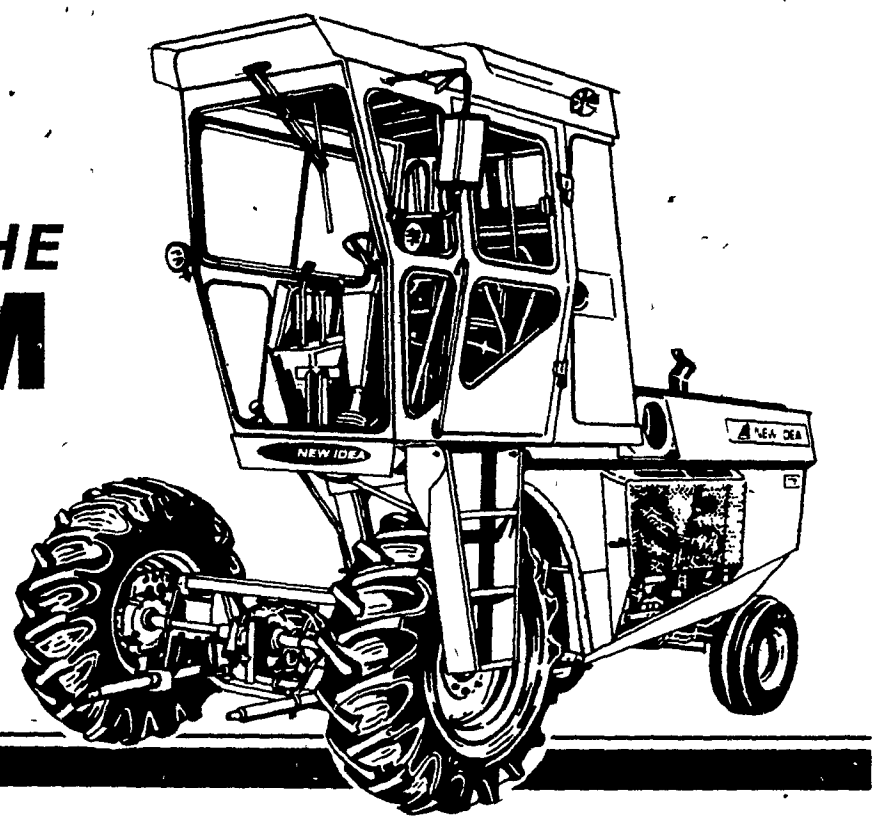
A NEW GENERATION OF THE
UNI-SYSTEM



IT'S BUILT TO DO MORE!

We are proud to present the new 800 series Uni-System from Avco New Idea. These harvesting machines are designed to meet the increased capacity needs of today's farmer. The heart of this series is the 801, Uni-System's largest power unit. Still featured is the unique Uni interchangeability. You can mix and match new and current Uni harvesting machines to fit your particular needs.

Main Features of the 801 Power Unit:

- Convenient Controls
- Cush-N-Ride Deluxe Seat
- New Traction Drive
- Diamond Cab
- 426 Turbo Diesel Engine
- New Hydraulic System

The remarkable 801 Power Unit is just the beginning. Other members of the Uni-System's new generation are equally remarkable! The new 818 Combine has a larger capacity. The five models in the new 800 Series **FAS-TACH** CORN HEADS GIVE SUPERIOR PERFORMANCE. The new 838 Husking Bed is designed for high capacity ear corn harvesting and can handle up to six rows.

"AAA" LACT-AID™

Just before farrowing, she needs all the help she can get.

This could be the most critical stage in determining the profitability of your operation — 7 days before farrowing to weaning. So give your sows every chance to produce a big healthy litter. Feed Master Mix "AAA" Lact-Aid™ complete feed. The laxative effect of "AAA" Lact-Aid reduces problems such as constipation and MMA, and its palatability keeps sows on feed when you move them into the farrowing quarters. You know how critical it is at this stage to provide proper levels of calcium and phosphorus ... they're **guaranteed** in "AAA" Lact-Aid. And all nutrients are balanced according to the available amino acid concept to assure accurate, economical feeding.

York Co.'s Patty Greek

Being dairy princess is exciting job

Patty Greek, York County's Dairy Princess, poses with her favorite cow, who goes by the name of "Luscious". The two have been a familiar pair at many dairy show competitions.

By SUSAN KAUFFMAN
Staff Writer

Commodity queens and princesses all have one thing in common – they are proud of the products they represent. But the individual backgrounds of these girls are as varied as their personalities and family experiences can fashion.

York County's dairy princess, Patty Greek, will be ending her reign later this month. In her year's experience as a promotor of dairy products, Patty says she has gained greater ease in speaking before the public assemblies and has learned that many people young and old really do not fully understand the dairy cow and the importance of milk in their diets.

A graduate this past week of Red Lion High School, Patty lives with her parents and two brothers on a twenty acre dairy farm near Delta, southern York County. While her father works for a trucking firm based in Elkton, Maryland, it is Patty and her brother Leonard who operate the dairy enterprise. Patty explained how this arrangement came to be.

"We moved here six years ago this June," she related. "Leonard purchased a registered Holstein calf from Paul King for a 4-H project. I followed in his footsteps when I was thirteen years old. When our 4-H and FFA dairy animals starting milking, my brother decided that was what he wanted to do for a living. He was a senior and I was a sophomore in school. Three years ago we started milking a few of our cows, then July 1, 1977, we started shipping milk from our new stall barn."

"Now we have nineteen cows milking with calves and heifers in addition to that number," she continued. "My brother would like to double the size of the herd in two years. "We have twenty acres here at home but rent and farm a total of seventy acres. We raise our own corn for silage, some ear corn, most of the hay, wheat straw and buy grain and hay to finish out the feed."

Patty, while attending high school, helped start the morning milking and helped with the evening milking and recently she and her brother have arranged schedules so that they each get every other Sunday evening milking off. During the fieldwork time, Patty does her share of the tractor work such as raking and baling hay.

Having had a committed background in dairy animals in her 4-H and FFA projects, she was urged by the previous year's York County dairy Princess to enter the pageant. Reluctantly Patty says she did so with little hope of being chosen to represent the industry as a county princess. She recalled that although she might not have known beforehand what sort of questions might be asked of her by the judges, she was the more overwhelmed with the thought of having to speak before a large crowd.

The York County pageant is held at the 4-H center and involves a dinner, individual interviews before a panel of judges, and an on-stage formal appearance complete with impromptu questions and brief interview by a master of ceremonies.

June 10, 1978, Patty was selected from a list of six contestants to promote the industry to the general public in various methods arranged by the county dairy princess committee.

One major part of her task was to continue an on-going program of speaking to elementary school children. The county committee sets up these visits with the help of the alternate princesses as well to go into different schools each year. Patty said she went to five schools while the alternates covered another four or five schools too.

"We take a cow and a calf along and tell the children about where milk comes from, how it is processed and how important it is to their diets," she explained.

"I was surprised that children who live in the country really have never been close to a calf or a cow and are so interested in where the milk comes from," she noted. "They can't believe it!"

Another part of her promotional tasks included making appearances at various industry banquets throughout the year, including local as well as milk co-operative meetings. While not officially recognized at the York Fair, Patty helped hand out ribbons during the fair and worked at the dairy princess committee booth.

Patty put in appearances at many parades as well. The local towns and the York Halloween parade were included in the parade schedule.

Very interesting and challenging to Patty were the television sessions in which she participated. The first television program was planned to promote the York County Fair held last September and the dairy industry in general. This was broadcast over York station TV 43. Two weeks ago Patty appeared on Channel 8 in Lancaster on "Noonday on Eight" with Adams and Lancaster County dairy princesses.

"We were interviewed while on camera without any specific questions or answers given before we went on tv," she explained. "We were told what the general subjects would be, but that was all."

Having had the year's experience in speaking out, Patty says she feels that now she will talk in public while she probably would have kept quiet without the practice and training she received as a dairy princess.

"You get to meet so many different kinds of people," she stated. "The children are the easiest for me to talk to while the older adults are more difficult," she said. While she admits to gaining insight into being more outspoken than she once was, she still finds it a challenge to relate to adults.

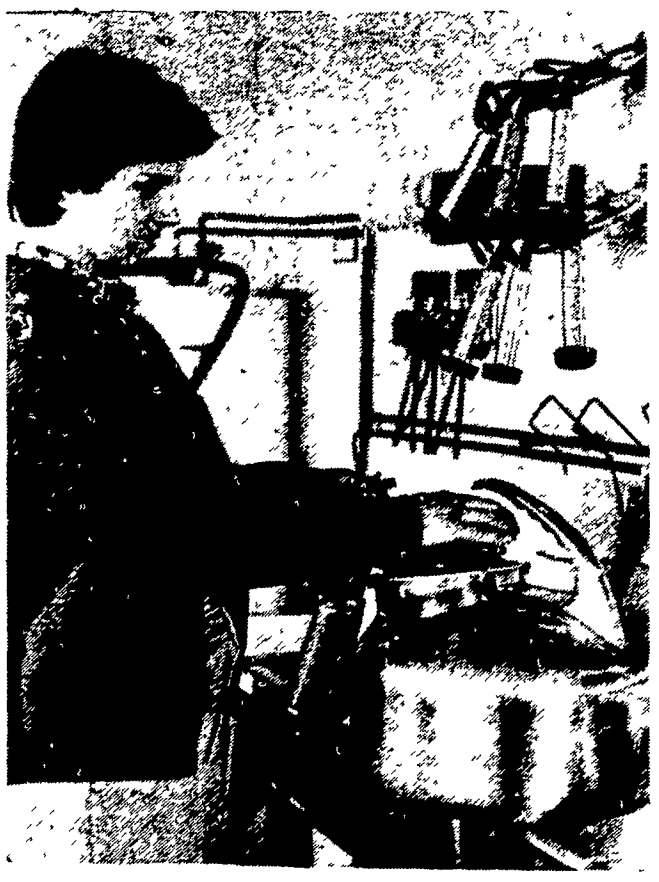
"I think the age group that needs to drink more milk or needs to be informed of their needs for milk products in their diets are the young adults, say 25 to 35 years old." She continued her explanation, "The children are told to drink milk by their parents and older adults realize their need to continue drinking or consuming dairy products for their health, but the twenty and thirty year olds, I think, feel that they don't need to drink milk anymore and they eat poorly planned diets. If they say milk is fattening, then I would point out to them that for the vitamins and nutrition they get from milk, it is worth it. They should cut out the junk foods that give little nutrition and use dairy products instead." she explained.

Patty's family includes her parents Mr. and Mrs. William Greek and her brothers David, 22 and Leonard, 20. Ice cream is the family's favorite dairy product according to Patty with her favorite dishes being casseroles with milk and milk products used as in scalloped potatoes.

In the last 12 months Patty has had many opportunities to appear and speak in public, but in past years she made many public appearances as a silent participant in the show ring. Her first 4-H calf turned out to be a valuable show cow. She explained that she did not get her first choice when she bought "Luscious" from Paul King, but she grew to be a fine animal. Kingway K-V Luscious Laurel received honorable mention as a two-year old at Harrisburg in 1977 at the Pennsylvania show, and grand champion at the county 4-H, York County Fair 4-H competition and the county black and white show. In the 1979 Farm competition Luscious placed second in the open class and first in the junior class.

Patty said that she and her brother make a team that enjoys showing their animals as much as possible. While her brother prefers the grooming work, Patty prefers the actual showing. She looks forward to a future as a secretary in some dairy related business and working with her animals for several more years. Patty has eight animals of her own with two milking presently. "I plan to keep them in the near future," she stated emphatically.

Although Patty will soon be giving up her duties as York County Dairy Princess – and she says she will miss the opportunities even with the hectic schedule that sometimes results, she will undoubtedly be deeply involved in the dairy business in the future.



Showing that she is at home in the milkhouse, Patty helps out with the milking every day.

On being a farm wife

—*And other hazards*

By JOYCE BUPP

It was a Monday morning - in the truest sense of the phrase.

In spite of the warm temperature, leaden skies hung low overhead and a dripply mist clung to the ground, dotting the trees and grass with soggy spangles.

From Richard's bedroom rang out the deep-throated croupy cough found in the elementary school age group afflicted with May colds.

That doggone clock must be lying - otherwise I had overslept!

"Hey, hon," came an urgent call from downstairs. "Do you have any idea where to find the off-hours phone number for the water pump repair man?"

Oh no. It wouldn't. It couldn't. Not now.

It had.

Down in the basement, the odor of burnt electrical fixtures was overpowering. Normal humming of the pump, which feeds every drop of water needed across the farm and in the house, had been replaced with uncommon silence.

Minus the aid of my contact lenses (I can't even find an eye chart without them), I stumbled down across the slippery lawn to the springhouse for a pitcherful of water.

The farmer, bless his heart, had been brewing a pot of coffee when the pump died. He had then headed for the milking parlor to wash udders with clean water salvaged from the milker equipment cleaning cycles.

Eventually, minus the normal splashing of running water in the kitchen and bathroom faucets, Patty was fed and off to school, Rich had been settled on the couch to recuperate with a book of games and a supply of Kleenex and the cows worked their way through the morning milking.

Two hours after discovery of the pump's burned out motor, an angel in dark work clothes descended in a repair truck of heavenly cloud white with his tools and a replacement motor.

Shortly thereafter, I absent-mindedly walked to the kitchen sink and began to fill a container with water that poured out at the turn of a spigot. It took me a full five seconds to remember that it had been broken.

"Hey, guess what?" I called to Richard. "We have water again!"

"Maybe it's just a trick," he warned.

Trick nothing. Instant running water is no trick.

It's more like.....let's see.....a miracle!

Junior Cooking Edition

Strawberries Galore greet you in this week's Junior Cooking edition. Old fashioned strawberry short cake, strawberry pie, frozen strawberry desert, strawberry junket, strawberry crown trifle, strawberry puff, strawberry chiffon pie and strawberry yummy are featured this week by our junior readers.

We have received lots of ice cream and pudding dairy recipes. How about sending in some dairy by-product recipes including cottage cheese, yogurt, cheeses, etc.

A special gift will be sent to each junior reader having a recipe published during Dairy Month.

Send all recipes to **Lancaster Farming**, Junior Cooking Edition, Box 366, Lititz, Pa. 17543. Be sure to include your name, address, and age along with your complete recipe.

STRAWBERRY CROWN TRIFLE

1 cup sifted cake flour
1 teaspoon baking powder
¼ teaspoon salt
½ cup milk
2 tablespoons margarine
2 eggs, beaten
1 cup granulated sugar
1 teaspoon vanilla

PUDDING

⅓ cup granulated sugar
1 tablespoon cornstarch
2 egg yolks, beaten
1/8 teaspoon salt
1 cup milk
1 tablespoon butter
1 tablespoon vanilla
1 cup whipping cream
2 cups strawberries
3 tablespoons granulated sugar
confectioners' sugar
extra strawberries for topping

Sift together cake flour, baking powder, ¼ teaspoon salt. Heat the margarine and milk. Keep hot. Beat the eggs, 1 cup sugar and vanilla for three minutes. Add sifted dry ingredients to egg mixture. Stir in the hot milk and vanilla. Blend well. Bake in two eight inch round cake pans. Bake at 350 degrees F for 20 minutes. Cool in the pan for 10 minutes. In a sauce pan combine ⅓ cup sugar, cornstrch, 1/8 teaspoon salt and 1 cup milk. Cook and stir over medium heat until it thickens. Add 2 beaten egg yolks. Cook and stir for two more minutes. Remove from heat and add butter and vanilla. Cool. Whip ½ cup cream and stir into the pudding. Crush the strawberries and add 3 tablespoons sugar to them. Split the cake layers in half to make four layers. Fit one layer in a 1½ quart fruit dish. Spread 1 cup crushed strawberries over it. Add the second cake layer. Spread the second cake layer with the pudding mixture. Place the third cake layer on. Spread with the remaining strawberries. Put the fourth layer on, cut side down. Sift a small amount of confectioners' sugar on top. Whip the other ½ cup whipping cream and top the dessert with it and halved strawberries. Makes 12 servings.

Lena Lapp
Age 13,
Gap, Pa.

STRAWBERRY CUSTARD

2 cups milk
2 tablespoons powdered strawberry drink mix
3 tablespoons granulated sugar
1 teaspoon vanilla
1 rennet tablet
1 tablespoon cold water

Set out four or five dessert dishes. Combine milk, sugar and flavoring. Heat to lukewarm (110 degrees F). Disperse rennet tablet into water by crushing. Add to warm milk and stir for a few seconds only. Pour at once, while still liquid, into individual dessert dishes. Let stand undisturbed for 10 minutes. Chill.

Mary Edna Brubaker
Age 7,
Myerstown, Pa.

STRAWBERRY CHIFFON PIE

3 eggs, separated
¼ cup granulated sugar
1 package unflavored gelatin
4 tablespoons cold water
1½ cups fresh strawberries
1 baked pie shell
whipped cream

Beat the three egg yolks slightly. Add ¼ cup sugar. Put in the top of a double boiler and cook, stirring constantly until thickened. Soak the gelatin in water. Add to mixture. Remove from heat. Add strawberries and mix well. Chill until it begins to thicken. Beat the egg whites until they hold a stiff peak. Add ¼ cup sugar and beat stiff. Mis this with the strawberry mixture. Pour into a baked pie shell. Chill and serve with whipped cream.

TOURS FOR FARMERS
AND PEOPLE INTERESTED IN FARMING

EUROPEAN FARM TOUR Tour #2125 October 1979
Beginning with the Olna Fair, the largest dairy and farming fair in Switzerland, this tour takes you through some of the most scenic parts of Europe while focusing on points of interest to farmers, such as a meat factory; a cattle breeding station in Austria, a cheese dairy; an artificial insemination center in Switzerland, and the original home of the Holstein Friesian cattle in Holland.

SOUTH AMERICAN FARM TOUR Tour #3114 February 1980
See farming methods in Brazil, Paraguay and Columbia, plus the most famous and spectacular sights in South America. Places such as Sugar Loaf Mountain in Rio de Janeiro; Iguassu Falls on the border between Brazil and Paraguay; the renowned "Lost City of the Incas" at Macchu Pichu; and the Panama Canal. This is a super "Around South America" tour planned and designed by farm people for farmers

FARM TOUR OF EUROPE Tour #3316 August 1980
(Including the Passion Play at Oberammergau)
This will be a tour of the Palatinate (where Pennsylvania Dutch originated); Alsace and Lorraine in France; and Switzerland. This tour will feature visits to farms and will climax with attendance at the world famous Passion Play at Oberammergau in Southern Germany, perfomed only every ten years. This should be a very exciting tour, visiting places important to the heritage of people from this area

AUSTRALIA AND NEW ZEALAND FARM TOUR February 1981
It's not too early to be thinking about our Australia and New Zealand farm tour in 1981. This tour will feature visits to grain, livestock and dairy farms, and will include visits with farm families from "down under". All details have not yet been finalized, but let us know if you want further information as it becomes available.

Brochures are available for the above tours. Ask for them and we'll send them to you immediately. There's no obligation in asking for the brochure, and maybe you'll find something you like. Heritage Travel is a specialist in farm tours. Our staff has had experience in farming both here and abroad, and we can make your visit on one of these tours very enjoyable and memorable. If you have any questions, give us a call, or drop us a card. And do ask for the brochures – they're free, and they have a lot of information in them

Junior Cooking Edition

(Continued from Page 100)

STRAWBERRY PUFF

¼ cup brown sugar
1 cup flour
1 cup chopped nuts
1 stick margarine
2 cups strawbewrries
3 egg whites
1 cup granulated sugar
2 cups whipped cream

Mix brown sugar, flour, nuts and margarine until crumbly. Bake 20 to 30 minutes at 325 degrees F. Stir several times. Take ⅓ of crumbs out and reserve for topping. Spread the remaining crumbs in a 9 by 13 inch cake pan. Blend strawberries in blender. Beat the egg whites, sugar and strawberries in a large mixer bowl for 20 minutes, or until thick. Fold in the whipped cream. Pour on top of the crumbs in the cake pan. Sprinkle the remaining crumbs on top. Freeze four to five hours, or overnight.

Arlene B. Nolt
Age 9,
Shippensburg, Pa.

OLD FASHIONED STRAWBERRY SHORTCAKE

3 cups sifted flour
4 teaspoons baking powder
2 talbespoons granulated sugar
1 teaspoon salt
½ cup shortening
1¼ cups milk
1 quart strawberries, sweetened
whipped cream

Sift flour once, measure and resift with baking powder, sugar and salt. Cut in the shortening until the mixture resembles coarse meal. Add milk to make a soft dough. Divide in half. Put one half into a greased nine inch layer cake pan. Brush with melted shortening, or butter. Cover with the second half. Bake in a 450 degrees F oven for about 30 minutes, or until done. Separate the layers, spread quickly with butter. Put sweetened berries on bottom half. Put top cake layer on. Place the remaining strawberries on top. Cut into wedges to serve. Have cream or whipped cream available for individual tastes. Will serve six to eight.

Fannie Beiler
Age 10,
Peach Bottom, Pa.

STRAWBERRY PIE

⅓ cup redisol sauce
1 ¾ cup granulated sugar
1 quart strawberries
whipped toping
baked pie shell

Mix the redisol sauce and sugar together. Put strawberries in blender and chop them. add redisol sauce mix. Mix well. Fill the pie shell with strawberries and pour glaze over. Top with whipped topping.

Fern Martin
Age 12,
Lititz, Pa.

STRAWBERRY SHORTCAKE

½ cup butter
⅔ cup light cream
1 egg, beaten
2 cups flour
2 tablespoons granulated sugar
3 tablespoon baking powder
½ teaspoon salt
4 cups sweetened strawberries
1 cup whipping cream

Mix butter, light cream and egg. Sift together flour, sugar, baking powder and salt. Stir all ingredients together until moistened. Divide dough into two greased layer cake pans. Dot with butter. Bake at 450 degrees F for 12 to 15 minutes. Cool cake layers. Whip the cream. Divide the cake layers in half to make four layers. Put strawberries and whipped cream between each layer, topping off with strayberries, whipped cream and a whole strawberry for garnish.

Barbara King
Age 11,
Atglen, Pa.

FROZEN STRAWBERRY DESSERT

¼ cup brown sugar
1 cup flour
¼ cup nuts
½ cup melted butter
2 egg whites
⅔ cup granulated sugar
1 box frozen strawberries
½ cup whipped cream

Combine the brown sugar, flour, nuts and butter. Mix like a pie dough. Pour crumbs into a cake pan. Bake at 350 degrees F for 20 minutes. Cool. Stiffly beat the egg whites. Ad sugar and strawberries. Cream. Beat until stiff. Line a dish with the crumbs. Fill with the strawberry mixture. Put into the freezer until ready to serve.

Lorella S.Burkholder
Age 10,
Mifflinburg, Pa.

STRAWBERRY YUMMY

1-3¾ ounce package instant vanilla pudding
1-3 ounce package strawberries gelatin
1 cup boiling water
5 ice cubes
1 cup whipped topping
1 cup fresh strawberries

Prepare pudding as package directs. Dissolve gelatin in boiling water. Add the ice. Combine pudding and gelatin. Chill. Fold in whipped topping and strawberries. Chill thoroughly and serve with the top garnished with fresh berries. Raspberries can also be used.

Rodney Bomgardner
Age 8,
Annville, Pa.

Ida's Notebook

Ida Risser

Last week I started picking the first strawberries and peas. They were the start of a busy season. We usually alternate days between the two and therefore can find time for almost nothing else. By the time the last sugar peas are over at the end of June, the weeds will almost have taken over the garden – but I'll rescue it.

Philip has come home, from his freshman year at Penn State, and will be a welcome help here on the farm. He planted no-till corn in the fields where crown vetch was started as a cover crop. He also hauls manure most everyday and even finds time to put up a screen door at the house for me.

A big job for this Summer will be putting in a large manure storage area. Several engineers have worked on the plans and they have now been approved. Because we live along the Conestoga River, special attention must be given to the drainage area. I'm always a bit skeptical about pouring tons of concrete and spending thousands of dollars and find it difficult to accept this as "progress".

My husband hasn't missed a milking, morning or night, for over a year and he's hoping to take a day or two off this Summer. He has even promised to go with me to an antique sale in Sullivan County. Before we were married, we both hunted deer in that county. Even now we enjoy driving through mountainous areas and watching for wildlife. I've spotted wild turkeys while driving to the coal mines for our Winter supply. Another plus, in my nmind, is the "smell" of a cool, damp, woodsy region. So here's hoping we pick a nice day.

Dairy license in jeopardy

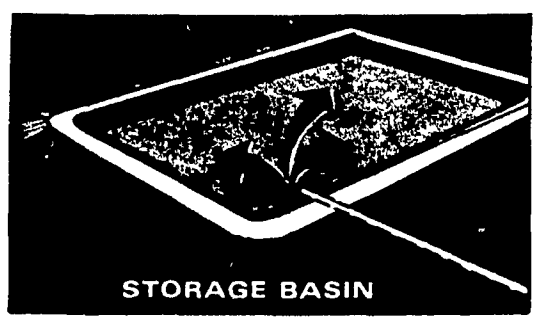
HARRISBURG — A cottage cheese manufacturing plant in northwestern Pennsylvania, Titusville Dairy, may have its license revoked by the Pennsylvania Milk Marketing Board. Such action, as well as the collection of a property bond is currently being considered by the PMMB. Titusville Dairy owes about $200,000 to over 100 dairymen and has proposed a payment rate of $18,500 per month. Dairymen, all of whom now ship to Brookfield Dairy in Sharpsville, are requesting interest on the money owed.

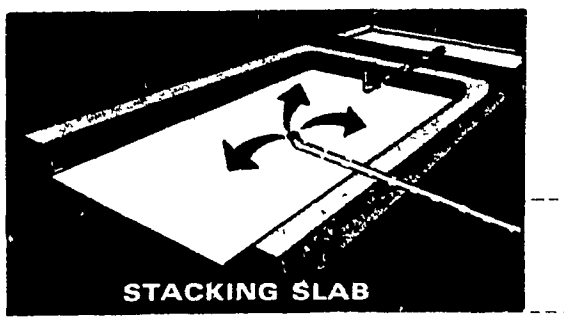
The Titusville Dairy is no longer buying from producers following the citation by the PMMB earlier this year for inadeqate bonding. A decision on the matter is expected on June 12.

Messeth

the Original Piston Pump for Controlled Manure Storage.

Whether you choose to handle manure as a semi-solid or liquid, Nesseth has the pump and the experience to design a manure management system best suited to your requirements. More farmers have installed the Nesseth system than any other — and for good reasons. The Piston Pump was originated and developed by Nesseth. We have three models available to meet different needs and it's easy to install in new or existing setups. The Nesseth Piston Pump is built for dependability and trouble-free service, and best of all, is far more economical than hydraulic systems or air tanks Remember — no one has more experience or more installations than Nesseth, the originatois of the Piston Pump





MANURE IS PUMPED UNDERGROUND THROUGH A 12" PVC PIPE TO STORAGE

Brazil's soybean crushers to get price hike

ST. LOUIS, Mo. – The Brazilian government is about to raise the price of domestic soybean meal and soy oil closer to world price levels according to sources in the Brazilian Ministry of Agriculture, it was reported in the current issue of American Soybean Association's SOYBEAN UPDATE newsletter.

This is a step toward reopening export registrations for soybeans and soybean products according to the Brazilians who said that crushers had been holding back on crush while fighting for 35 per cent price hikes. They were prohibited from registering more exports because the government wanted the domestic market, where prices are well below world prices, supplied first.

Soybean exports, currently at 1.095 million metric tons registered, are not likely to reopen, but more meal and oil will soon be authorized to leave the country once crushers fill Brazilian needs. Total oilseed crush there is projected to run at 48 per cent of its 19 million metric ton capacity this year compared to 42 per cent last year.

Americans consumed more eggs, cheese, fish, chicken, turkey, butter, and margarine last year, according to the National Food Review. However, consumption of meat, fruit, sugar, rice, milk, tea and cocoa was down.

Mulch recommended for young trees

MEDIA – Fertilization and watering are not enough for the successful establishment of young fruit trees in the home garden. You should eliminate the grass and weeds that compete for water and plant nutrients, advises James J. McKeehen, Delaware County Extension Agricultural Agent. Failure to do so may result in stunted tree growth Cultivating or mulching an area extending three feet in all directions from the tree trunk will eliminate competing weeds In mulching, however, exclude a small area immediately adjacent to the truck and use a wire trunk guard to protect against mice chewing the bark on the tree. The mulch should be 6 to 8 inches deep to keep grass and weeds from coming through. While mulching three feet from the trunk usually is sufficient, you may wish to cover an area roughly equal to the spread of the branches.

Broadcast one-half pound of 10-10-10 fertilizer evenly around the space to be mulched before the mulch is applied. This will assure an adequate nutrient supply for the tree. Mulching offers practical advantages for the home fruit grower. It eliminates most cultivation, conserves moisture, reduces soil temperature variations, and adds organic matter to the soil Hay, straw, sawdust, wood shaving, shredded bark, and chopped corn cobs are good mulch materials. Fine grass clippings and leaves are less satisfactory because they tend to pack tightly and may form a water resistant shield causing water to run off. Mulches also increase the possibility of mouse damage to fruit trees. They offer more shelter from their natrual predators. Mulches. of organic materials also constitute a fire hazard during dry weather.

Cultivation or mulching may be stopped 5 or 6 years after planting and replaced by the use of recommended herbicides.

Kendy's Kollumn

by Kendace Borry

When I plant flowers, there is something inside of me that goes just a little bit crazy.

Earlier this Spring I was sent to the store to buy the vegetable seeds Nobody said anything about flowers, but there those seed packs were, beckoning me closer. I tried hard to resist, but soon my hands were filled with packets of porticulacas, zinnias, marigolds, four o'clocks, forget-me-nots, sunflowers, and hosts of others.

Then I saw the petunias. Peeking out of their little plastic trays, the young plants were just so tempting that they too soon filled my shopping cart

Back at home, I happily laid out my possessions. Soon young seedings filled the back porch, as seeds grew into promising greens, and petunias adorned hanging baskets which just waited for a place to be hung.

Then disaster struck

It seems that there is one lamb in the barnyard crowd this year that is just a little more adventuresome and bold than any of its predecessors

One dark and warm Spring night, this naughty lamb discovered the porch. And proving that he was no dummy, he marched right up the four wooden steps leading to it, and smiled his glee at seeing so many luscious desserts there for his pleasure. So all night long, he sampled here, tasted there, and even bumped off from the porch those he found to his disliking.

In the morning, I almost had a heart attack. And while the guilty culprit blissfully slept off his full belly, I screamed dire threats to the cats and dogs telling all what would happen if I found the guilty culprit.

Like all bandits, the guilty criminal soon returned to the scene of the crime, only to be rousted out by a not-so-happy lover of flowers. The lamb was caught, scolded, and banished to the upper reaches of the pasture

But knowing him, I think he'll be back.

Life may be a little rough this year for the flowers

Variety is the spice of life

As we prepare for gigantic dairy issue next week, we're taking the opportunity to use some of the recipes that never quite made it into the paper with this Spring's themes. So, true to the headline above, there should be recipes today that fulfill a wide variety of needs.

We will be featuring dairy recipes the entire month of June, so you still have time to send in a dairy product recipe to share with our readers. Each person who shares a recipe will receive a special gift as our way of saying thank you.

STRAWBERRY CREAM PIE

1 pint strawberries, hulled
4 ounce package of coconut cream, vanilla or French vanilla flavored instant pudding
1½ cups cold milk
4 ounce container whipped topping, thawed
1 baked 9 inch pie shell, cooled

Set aside one cup of the strawberries for garnish; quarter or slice the remaining berries. Prepare the pudding mix as directed on the package for pie, reducing the milk to 1½ cups. Blend in ½ cup of the whipped topping. Fold in the quartered strawberries and pour into the pie shell. Chill at least three hours. Top with the remaining whipped topping and garnish with the whole strawberries.

BROCCOLI AND ONION CASSEROLE

10 ounce package frozen broccoli
3 tablespoons butter or margarine
3 tablespoons flour
½ teaspoon curry powder
¼ teaspoon paprika
dashof ground red pepper
1½ cups milk
½ cup grated sharp cheese
2 cups small whole onions

Cook broccoli as directed on package. Melt butter, add flour and saesonings. Blend. Add milk; cook, stirring constantly, until thickened. Add the cheese, stir until melted. Drain the onions, add to drained broccoli in a greased 1½ quart casserole. Pour the sauce over the vegetables. Bake in a moderate oven, 350 Degrees F. for 20 minutes. Serves six.

Peggy Brown
Hanover, Pa.

MAYONNAISE BISCUITS

1 cup self-rising flour
1 tablespoon mayonnaise
½ cup of milk (scant)

Mix all of the above ingredients together. Drop by teaspoon on a baking sheet. Press down with a fork. Bake in a hot oven for 15 to 20 minutes. These biscuits can also be made with an all-purpose flour, using ½ teaspoon baking soda and 1½ teaspoon baking powder.

Mrs. Allen A. Miller
Hartly, Del.

CUCUMBER CREAM SALAD

¼ cup lemon juice
2 medium cucumbers, sliced thin and drained
½ cup California dip
1 teaspoon granulated sugar

California Dip

1 envelope of onion soup mix
1 pint of dairy sour cream

To make the California Dip, combine the onion soup mix with the pint of dairy sour cream. In a large bowl, blend the California Dip, the lemon juice, and the sugar. Add the cucumbers and toss well; chill. If desired, garnish with fresh dill. Makes about six quarts.

STRAWBERRY SOUR CREAM PIE

2 cups strawberries, crushed
3 tablespoons granulated sugar
½ cup sour cream
8 ounces whipped topping
crumb crust for pie

Combine the strawberries and the sugar. Stir in the sour cream and then fold in the whipped topping. Spoon in to the crust and cill for about four hours, or freeze until firm. Garnish with additional strawberries, if desired.

STIRRED CUSTARD

2 cups milk
¼ cup granulated sugar
3 eggs, beaten
2 teaspoons vanilla

In saucepan, combine milk and sugar, scald. Add a little hot milk to eggs; return all to pan. Cook over low heat, stirring constantly, until mixture coats a metal spoon. Remove from heat. Stir in vanilla. Chill. 188 calories per ¾ cup serving.

Summer parties often call for an easy but elegant dessert. Two such desserts offered today in Home on the Range are Peach Ice Cream Meringue and Strawberry Cream Bombe.

PEACH ICE CREAM MERINGUE

Filling

1 quart peach ice cream

Meringue

3 egg whites
½ teaspoon cream of tartar
¾ cup granulated sugar
½ cup sliced almonds

Cake

⅓ cup butter
¾ cup granulated sugar
1⅓ cups sifted cake flour
1½ teaspoons baking powder
¼ teaspoon salt
⅓ cup milk
½ teaspoon vanilla
2 egg yolks

For filling, line a 9 inch cake pan with foil, leaving a two inch overhang on two sides. Pack ice cream into pan. Freeze until firm. For the meringue, beat the egg whites with the cream of tartar until soft peaks form. Add the sugar, two tablespoons at a time, beating well after each addition until all the sugar is dissolved and the whites are stiff and glossy. Set aside. For the cake, heat the oven to 350 Degrees F. Butter two nine inch round cake pans. Line the bottoms with waxed paper; butter paper. Cream the butter. Combine the sugar, flour, baking powder and salt. Add to butter along with milk and vanilla; mix until dry ingredients are moistened. Beat for two minutes on low speed of mixer. Add the eggs and beat one additional minute. Spread in prepared pans. Spread half of meringue over the batter in each pan being careful to keep meringue 1½ inches from the sides of the pan. Sprinkle almonds over the meringue.Bake 30 to 35 minutes. Cool in pans on rack for 15 minutes. Turn out on rack and remove waxed paper. Turn meringue side up again. Cool. To serve, place one meringue layer on a serving dish invert pan of ice cream on top of meringue layer, remove pan and foil. Top with second meringue layer.

STRAWBERRY CREAM BOMBE

1 quart strawberry ice cream
1 quart lemon custard or lemon ripple ice cream

Chill a seven cup mold in the freezer. Quickly spread ice cream as evenly as possible with the back of a spoon or spatula on the inside of the mold to make a shell lining about ½ inch thick. Return to freezer to harden. Spoon lemon custard ice cream into center of strawberry ice cream shell. Pack firmly. Cover and freeze until firm preferably overnight. To unmold, dip into lukewarm water and turn out onto chilled plate Garnish with fresh strawberries, if desired

BLUE CHEESE DRESSING

1½ cups blue cheese, crumbled
garlic salt to taste
4 tablespoons cider vinegar
½ cup corn oil (or any salad oil)

Put the cheese and garlic salt in a medium sixe bowl and beat in vinegar. Gradually add the oil, beating constantly with a rotary beater. Makes two cups.

Mrs. Eva. S. Rubinosky
Upper Gwynedd, Pa.

FRESH STRAWBERRY PIE

8 inch baked shell
3 tablespoons cornstarch
¾ cup granulated sugar
¼ cup water
4 cups fresh strawberries
½ teaspoon lemon juice
few drops of red food color
whipped cream

In a saucepan, combine the cornstarch, ½ cup sugar, water and 2 cups of strawberries. Bring to a boil, cook, stirring until thickened and clear. Remove from heat. Add remaining sugar and stir. Add lemon juice and food coloring, plur the remaining strawberries. Turn into pie shell and refrigerate Garnish with whipped cream.

Marjorie Rhoderick
Gettysburg, Pa.

SNOW PUDDING

1 tablespoon unflavored gelatin, (1 envelope)
1 cup milk
1 tablespoon instant coffee
1 package, 3¾ ounces vanilla instant pudding
1 cup milk
2 eggs whites

In s small saucepan sprinkle gelatin over one cup milk. Add coffee. Heat over low heat, stirring until gelatin is dissolved. Set aside. In a mixing bowl, stir together pudding and one cup milk. Add gelatin mixture and beat according to package directions. Beat egg whites until stiff but not dry. Fold into pudding. Turn into mold. Chill until set. 196 calories per serving.

HAM AND BEAN SOUP

2 or 3 ham hocks or the equivalent of smoked ham
1 pound navy soup beans
rivels

Cook the ham soft in a goodly amount of water. Remove the ham and dice. Cook the beans in ham broth. Add the diced ham and thicken with rivels. Serve warm.

(Turn to Page 105)

Diesel fuel assured

WASHINGTON, D.C. – A Mandatory Diesel Allocation Program that will entitle farmers and others in the food and agriculture sector to 100 per cent of their diesel fuel requirements is being implemented immediately by the Department of Energy. The DOE action means that wholesale suppliers of diesel fuel will be required to provide local distributors and retailers with supplies sufficient to meet farmers' needs. If necessary, major oil company refineries can be instructed to move fuel supplies to wholesale suppliers in agricultural areas. This move came in response to President Carter's pledge, made early in May, that he would not allow agricultural production to be disrupted by a shortage of petroleum.

(Continued from Page 104)

STRAWBERRY RHUBARB PIE

5 beaten eggs
1¼ cup granulated sugar
¼ cup flour
¼ teaspoon salt
½ teaspoon nutmeg
2½ cups sliced (one inch) pink rhubarb
1½ cups sliced fresh strawberries
1 tablespoon butter
pastry for 9 inch lattice top pie

Combine the eggs, sugar, flour, salt and nutmeg, mixing well. Combine the rhubarb and strawberries. Line the nine inch pie plate with pastry shell and fill with fruit. Pour egg mixture over top. Dot with butter--top with the lattice crust, crimping edges high. Bake in hot oven (400 Degrees. F.) for 40 minutes. Fill openings in lattice crust with fresh whole strawberries. Serve warm.

BROILED TOMATO HALVES

2 large tomatoes
2 tablespoons cracker crumbs
2 tablespoons prepared horseradish
1 tablespoon lemon juice
¼ teaspoon salt
¼ teaspoon paprika
2 teaspoons snipped parsley

Cut tomatoes in half crosswise. Combine cracker crumbs, horseradish, lemon juice, salt and paprika. Spread cracker mixture evenly over tomato halves; sprinkle with parsley. Place on rack in broiler pan two to three inches from heat. Broil three to five minutes or just until heated. Makes four servings.

MUSHROOMS ROMANOFF

1½ pounds fresh mushrooms
2 tablespoons butter
1 tablespoon lemon juice
½ teaspoon salt
1/8 teaspoon freshly ground pepper
2 tablespoons flour
2 teaspoons dill weed
1 cup milk

Wash mushrooms and trim off tips of stems; drain well. In skillet melt butter, add lemon juice, salt, pepper, and mushrooms. Saute mushrooms about five minutes. Stir in flour and dill weed. Add milk. Cook over medium heat; stirring constantly, until thickened. 100 calories for one serving.

PINEAPPLE MALLOWADE

24 marshmallows
1 cup water
1 No. 2 can of unsweetened pineapple juice (2¼ cups)
¼ cup lemon juice
little salt
1 pint 12 ounce bottle ginger ale, chilled

Place marmallows and water in top of double boiler. Heat over boiling water until marshmallows are melted, stirring occasionally. Blend in the fruit juice and salt. Mix well. Chill. Add the ginger ale just before serving. Pour into ice filled glasses.

STRAWBERRY PIE

1 baked pie shell or graham cracker crust
1 quart fresh strawberries
½ cup granulated sugar and a pinch of salt
1 tablespoon Redisol
½ cup whipped cream

Stem and wash berries. Crush enough berries to equal ¾ cup. Mix sugar and Redisol together very well and stir briskly into crushed berries until it becomes thickened. Slice half of the berries into the pie shell, add the crushed berries and slice the remaining berries on top. Top with whipped cream.

Mrs. Earl E. Brubaker
Loxsville, Pa.

HORSERADISH DRESSING

⅓ cup salad dressing
2 tablespoons catsup
½ teaspoon horseradish
1 teaspoon granulated sugar
dash of salt
dash of pepper
1 tablespoon milk

Mix the above ingredients together, stirring until well mixed. Mases one cup of dressing.

Jenny elected president of PHBA

KENNETT SQUARE - Marshall W. Jenny, owner of Derry Meeting Farm in Cochranville and a prominent Saratoga yearling consignor, has been named president of the Pennsylvania Horse Breeders' Association (PHBA). Jenney, who succeeds Russell B. Jones, Jr., was recently elected at the PHBA's annual meeting at New Bolton Center.

Other officers elected were: Richard D. Abbott, vice president, Paul D Mills, secretary, and Truman C. Welling, treasurer. Named to the Association's Board of Directors for three year terms were Roy V. Bergman, Melvyn R. Bowman, Sally M. Gibson, M. Roy Jackson, Charles B. Lyman, Jr., C. Harold Segraves, and Don Tesauro.

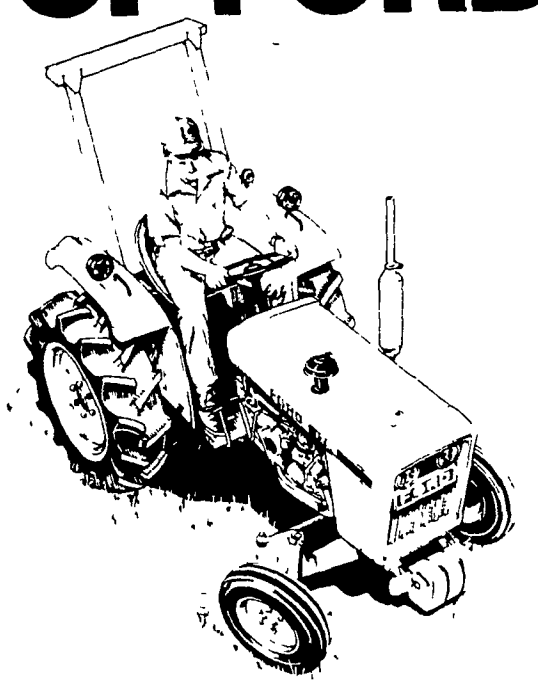
The PHBA is the agency responsible for the administration, promotion, and development of the Pennsylvania Breeding Fund program, designed to stimulate interest in the state's thoroughbred-breeding industry. Since the Fund's inception in 1975, over $6 million in awards and incentive payments have been dispersed.

SLN label granted for Tordon use

MIDLAND, Mich. – A special local need (SLN) label has been issued for the use of Tordon 10K pellet herbicide in Illinois. Regulatory agencies in that state have approved the pellet herbicide, a product of The Dow Chemical Company, for control of unwanted woody plants on permanent grass pastures and rangelands.

Tordon 10K pellet herbicide is a brush killer that is carried by moisture into the root zones of woody plants such as multiflora rose, hawthorn, juniper and sumac.

NEW KIND OF FORD!



25-HP FORD 1700 DIESEL

Built like a full-size tractor at a compact price
- Liquid-cooled diesel engine for operating economy
- All-gear power train with 12 forward speeds 4 reverse
- Three-point hitch with built-in hydraulics handles implements with fingertip ease
- 540 rpm PTO with overrunning clutch powers a wide range of implements Front PTO optional
- Optional four-wheel drive gives you extra traction when you need it

If you need more than a garden tractor but don t want to pay a big-tractor price come in today and *try a 25-hp Ford 1700 on for size*

Ladies Have You Heard?

By Doris Thomas

Lancaster Home Economist

Most of us want to save money whenever we can. One of our best opportunities to exercise money management skills happens at the food market.

One way to stretch your food dollars is to locate a food store that sells generic grocery products. You can save money because generic ingredients are less expensive and distributors generally spend less money to advertise, package, and lable them. At the same time, generics are as wholesome and nutritious as brand name products.

According to USDA food economists, consumers can expect to save an average of 25 per cent over national brands and about 15 per cent over store brands.

Cheaper packaging and lables keep cost of generics down. Lighter weight packaging materials, some with imperfections and more utilitarian packages (no spouts, protective coatings, or pull tabs) are used. Typical generic labels are black and white, printed on lighter non-varnished paper.

Standard minimum specification for generic foods is USDA grade C, with some grade B to fill in as needed. National brands and top-line store brands primarily use grade A and some grade B.

Vegetables are the most popular generic foods, followed by fruits. Popular non-food generics are paper good, followed by laundry soap and detergents, plastic wrap, sandwich and trash bags.

Most experts say it is too early to measure the long-run success of generic labels. but initial sales show they have hit a responsive chord for price and value sensitive shoppers.

BRACING SUNDAY BRUNCH

Sunday brunches have become so popular that they are practically an American institution. A centerpiece of a delicious, satisfying brunch can be a crunchy nut bread, still warm from the oven, topped with sweet butter or jam and served with steaming coffee, tea, or – for an extra special treat – hot chocolate.

And, there couldn't be a better time to include nuts in all of your menus than right now because, according to marketing specialists with the U.S. Department of Agriculture, they are in especially plentiful supply.

Try either of these interesting breads at your next brunch, and bask in the compliments that are sure to follow:

Peanut Butter Bread

4-1/2 cups flour
6 tsp. baking powder
1-1/4 tsp. salt
2/3 cup sugar
1 cup peanut butter
2 eggs, well beaten
2 cups milk
1 tb. grated orange rind
1/2 cup chopped salted peanuts

Sift flour with baking powder, salt, and sugar. Cut in peanut butter with two knives or pastry blender until misture is like cornmeal. Combine eggs, milk, and orange rind and stir with chopped peanuts into flour mixture until blended.

Grease bottom and sides of a loaf pan. Pour batter into pan and bake in 350 degree F. oven for 1 hour, or until done. Remove from pan and cool. When cool, wrap in foil and store overnight before slicing.

Fruit and Nut Bread

2/3 cup packed light brown sugar
1/4 cup shortening
2 eggs
2 cups flour
2 tsp. baking powder
1/2 tsp. baking soda
1/2 tsp. salt
1 cup milk
3/4 cup candied fruit, chopped
1 tsp. lemon rind, grated
1/2 cup chopped peanuts

Preheat oven to 350 degree F. and grease a loaf pan. Beat sugar, shortening, and eggs until creamy. Mix dry ingredients thoroughly. Stir dry ingredients and milk, alternately, into egg mixture. Add fruit, lemon rind, and nuts to last portion of flour mixture before stirring into batter. Pour into loaf pan and bake 1 hour or until done. Cool on rack 10 minutes before removing from pan. Finish cooling on rack after removal from pan.

USDA plans to drop live poultry handler rules

NEW YORK, N.Y. – The U.S. Department of Agriculture has proposed dropping regulations covering live-poultry handlers who operate in six major metropolitan centers because live-poultry marketing in the areas has become almost nonexistent.

Charles B. Jennings, deputy administrator for the Packers and Stockyards program of the department's Agricultural Marketing Service, said the rule change will not result in any less protection for persons involved in the production or marketing of poultry.

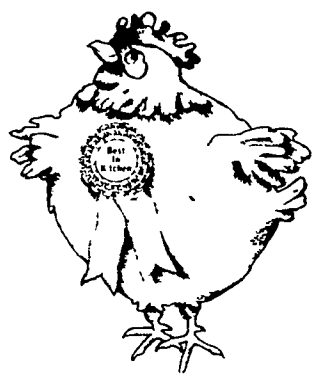
Areas affected are: Boston, Mass., and surrounding area; New York, N.Y., and northern New Jersey, including Jersey City; Newark, N.J.; Philadelphia, Pa., and surrounding area, including Camden, N.J.; Chicago, Ill.; and St Louis, Mo.

The rules which would be deleted or revoked were put into effect after Congress amended the Packers and Stockyards Act in 1935 to require licensing of all poultry dealers and handlers operating in the major designated areas.

Jennings said the department published rules in 1971 which cover live-poultry dealers and handlers operating throughout the U.S.

"These rules will be retained. We believe they are adequate to deal with any unfair practices that may occur in the marketing of live poultry anywhere in the nation," Jennings said.

The proposal was published in the May 11 Federal Register. Comments should be sent to Hearing Clerk, Room 1077-S, USDA, Washington, D.C. 20250. Comments must be received by July 16 and will be available for public inspection.



FRESH COWS

EVERY WEDNESDAY IS SPRINGERS

DAIRY DAY

AT NEW HOLLAND SALES STABLES, INC.
New Holland, PA

If you need 1 cow or a truck load, we have from 100 to 200 cows to sell every week at your price. Mostly fresh and close springing Holsteins.

Cows from local farmers and our regular shippers including Marvin Eshleman, Glenn Fite, Kelly Bowser, Bill Lang, Blaine Hoffer, Dale Hostetter, H.D. Matz, and Jerry Miller.

Farm equipment outlook improved

HERSHEY – Outlook for sales of farm equipment appears more favorable now than earlier this year. That is the consensus of a survey taken among farm equipment manufacturing company members of the Farm and Industrial Equipment Institute and reported May 24 at the organization's Spring Marketing and Management Conference.

The "State of the Industry Update" was presented to some 200 equipment manufacturing executives by Stanley F. Lancaster, a director of the FIEI Farm Equipment Division and vice president and general manager of International Harvester's Agricultural Equipment Group, North American Operations.

The report is an update of an outlook presentation made last January which predicted a 7.5 per cent increase in dollar volume for 1979 farm equipment sales. Indications now are that the dollar volume will go over 10 per cent of last year's total and many feel that may be conservative. These increases are in current dollars, taking in consideration the impact of inflation. In real terms, increases may be close to 3 per cent.

Sales of farm machinery look more favorable now than they did earlier this year, according to a survey revealed at FIEI's Spring Management Conference, held last week in Hershey.

The survey summary indicates 67 per cent of the respondents in the Farm Equipment Division are more optimistic than they were four months ago, only 2 per cent were more pessimistic.

Mentioned as key factors responsible for the projected dollar volume increase were: inflation, improved commodity prices, sharp increases in farm income, anticipatory buying, higher dairy price supports export demand. Those who were pessimistic cited as negative factors. rising fuel costs, near-record grain stocks, higher interest rates, no new grain reserve allotments and the lingering impact of the truck strike.

Outlook for Tractors

Farm tractor retail sales in the United States last year totaled 175,762 units, about ? 000 higher than was reflected in the earlier year-end estimate. The median forecast for

YOU'VE HEARD THE TALK.

There's a better way to dry grain. It's called CHILLCURING™ because it means CURING without heat. Here's what the talk is all about.

THE GRAIN

Every kernel of grain is alive when it comes out of the field It is a seed, able to grow because it has the ability to take on moisture Likewise, it can be kept in a state of preservation by removing the moisture already in it

But by heating the grain to dry it, the seed life is destroyed

By *removing* heat and moisture from the grain, it becomes dormant, and stays alive Then it can ripen to full weight, losing only water while keeping valuable protein, starches and sugar

THE SYSTEM

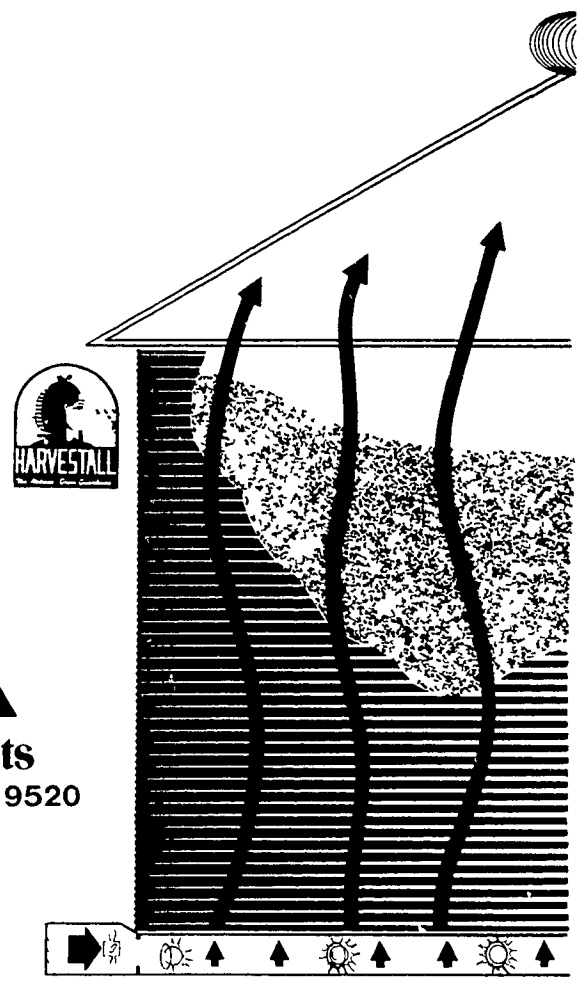
It s simple Grain goes from the field right to the bin With the unique AIRFRAME ˜ and AIRFLOOR ˜ the grain rests on a solid bed that allows maximum ventilation

Clean dry air is the best curing medium for the grain GRAINLAMPS ˜ provide electric sunshine cleaning and drying the air beneath the floor, before it passes through the grain

Fans force air under the floor Rising through the grain this dry outside air carries away moisture and heat

At the peak of the bin a jumbo 40 turbine the WHIRLCOOLER ˜ puts nature to work for you Wind and rising air keeps it turning, venting the system naturally

A special HARVESTAT ˜ Control System monitors the curing process A simple setting controls the GRAINLAMPS to make use of free, natural air



Advanced Ag Products
RD 2 Box 174 Elverson, Pa. 19520
215-286-9118

THE FACTS

1. You can't beat Nature HARVESTALL GRAIN CHILLCURING ˜ uses the same elements that ripen and preserve grain if left to itself free flowing air and infra red rays (sunshine)

2. CHILLCURING ˜ has been tried and proven in 17 states on over 3000 farms The research is in CHILLCURING™ WORKS!

3. The CHILLCURING ˜ system uses only the electricity to power fans and lights, using about 1½ KW hrs. per bushel. Compare that cost to other systems that use increasingly expensive fuels to get disappointing results.

4. The grain goes from the field to the bin and stays there till you need it Save time and money at harvest with the one step HARVESTALL CHILLCURING ˜ and storage system.

5. If you re in the market for grain storage, you owe it to yourself to look further into HARVESTALL GRAIN CHILLCURING ˜

Farm equipment

(Continued from Page 107)

1979 now calls for a 2.4 per cent increase to nearly 180,000, 4,300 units higher than the January outlook.

Sales of two-wheel drive tractors under 100 horsepower totaled 101,486 units. The May forecast calls for another record year of 102,000 units, more than 2,000 units higher than earlier forecast. The outlook for tractors in the 100 horsepower and over category is around 1,000 units above 1978's total of 65,532.

The sales of four-wheel drive tractors last year totaled 8,744 units, up nearly 14 per cent from the low levels of 1977. The median forecast for 1979 now calls for a 9.8 per cent increase over last year.

Less Pessimistic About Combines

The median forecast in January called for sales of 30,300 self-propelled combines, down about 3.8 per cent from last year's total. The 1979 forecast has been raised by almost 1,000 units to 31,250, 0.8 per cent below last year's actual.

The sale of cornheads for combines has been raised 500 units to 21,000 which would be 0.9 per cent below last year's results.

Tillage Equipment Sales to Equal Last Year

There was a wide range of opinions on the outlook for moldboard plows and disk harrows, but the median forecast calls for unit sales to about equal last year's 33,200 units and 56,000 units, respectively. The retail sales of field cultivators and chisel plows for 1979 are expected to be up between 7.5 per cent and 8.8 per cent over last year.

Increased Demand for Hay and Forage Equipment

A rather sharp increase in demand for most hay and forage equipment during the past few months reflects the very favorable profit margin in cattle, hog and dairy operations.

The median forecast for sales of conventional balers was up from January to essentially match last year's actual results of 21,000 units while large balers (200 lb. bales and over) are expected to increase sales by 8.1 per cent over last year's 18,500 units.

Sales of forage harvesters, mower-conditioners and grinder-mixers in 1979 are all expected to top last year's results while hay stackers are expected to be down 9.6 per cent from last year.

Farmstead Products Steady at About 7 per cent Increase

Forty-seven per cent of the manufacturers of Farmstead Equipment were more optimistic about the 1979 outlook than four months ago. Only 21 per cent were more pessimistic. A seven per cent increase in the retail sales dollar volume is anticipated, unchanged from the January forecast. The reasons cited for the sales volume increase were the same as those enumerated earlier, although the AED Group did express more concern about the Grain Reserve Program and the on-farm grain storage policies of the Department of Agriculture.

Dollar sales of portable augers and elevators are expected to increase six per cent this year. The need to replace and upgrade equipment was cited as an important reason for this increase.

The apparent shift to in-bin drying led participants to predict a five per cent increase in dollar volume sales of that type of equipment with batch and continuous flow dryers sales to decline two per cent for the year.

While a strong demand is expected to continue for dairy and beef cattle and hog production equipment, sales volume outlook for grain bins has been lowered. The current forecast calls for levels equal to last year because of: an increase in ASCS's interest rates, accumulation of on-farm storage and a reduction in the availability of credit for grain storage facilities.

Lawn and Garden Equipment

FIEI members manufacturing and selling lawn and garden equipment remain moderately optimistic about the 1979 dollar volume of retail sales with a six per cent increase forecast. Key factors contributing to the increase are: inflation, a strong snow equipment market, higher levels of consumer spending and price increases.

Respondents who were pessimistic about the 1979 outlook cited these factors: a decline in housing starts, rising unemployment, the truck strike and inflation.

The Farm and Industrial Equipment Institute is the national trade association for farm equipment manufacturers. Having been founded in 1893, it is one of the oldest manufacturers' trade associations in the nation.

Pork budget increased

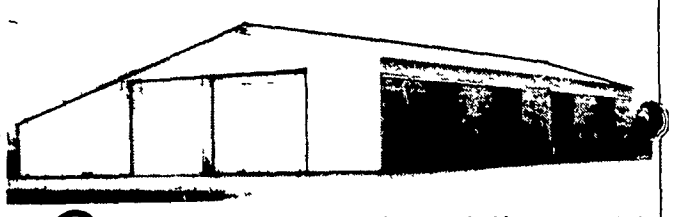
DES MOINES, Iowa — Money earmarked for pork promotions will be increased, according to a recent decision of the board of directors of the National Pork Producers Council.

The NPPC is making the move on the likelihood that pork will receive more consideration from housewives now that beef prices have risen sharply. Secondly, the extra promotion may help to move the increased pork supplies to consumers' tables.

According to the NPPC board action, the consumer relations effort will now total $2.3 million, representing 72 per cent of the NPPC's overall budget. Last year the organization, which boasts 92,500 producer members, spent $1.7 million for promotion.

SOONER OR LATER YOU'LL OWN A GENERAL PURPOSE BARN

HUSKEE-BILT STRUCTURES — THRIVE CENTER SYSTEMS BY HUSKEE BILT



Q Why are Huskee Bilt general purpose buildings so popular?

A They are versatile and economical Plus we offer you a wide range of options — multiple colors, big, wide doors, high eaves, stress rated lumber, skilled crews and Huskee-Bilt reliability

If you need a machine storage building, hay shelter, animal shelter or repair shop, you've got it in the Huskee-Bilt General Purpose Building. You'll be surprised at the low square footage price.

Export expansion of soybeans proposed

ST. LOUIS, Mo. -- Prospects of another record soybean crop reinforce the need for export expansion programs, according to Jud Seeley, president of the American Soybean Association Market Development Foundation (ASAMDF).

Recent USDA 1978-79 supply-demand estimates increased U.S. soybean usage by 25 million bushels to 1.889 billion bushels. In the same report, the government continued its estimate of a 140 million bushel carryover in September.

Given the seven per cent area increase indicated by its prospective plantings survey, USDA expects the 1979-80 crop to hit at least 1.9 billion bushels and, with favorable weather conditions, possibly push on to 2.2 billion, exceeding the record 1.843 billion bushel crop produced in 1978.

Anticipation of another bumper soybean crop can only reinforce the importance of export market development says soybean producer Seeley, a Donnellson, Iowa. Seeley points out that soybean exports, which last year amounted to over 53 per cent of the total crop, are important to farm profits and to the U.S. balance of trade.

"The role of market development is to find new markets for our expanded production," Seeley says, noting that of the 25 million bushel usage increase projected in the latest supply-demand report, 15 million bushels were added to soybean exports. "The 800 million bushel export estimate is 100 million bushels above the 1977-78 figure and 236 bushels over 1976-77," he said.

"These significant increases are evidence that ASA market development activities in 76 countries are helping maintain and create markets for U.S. soybeans," Seeley continues. "U.S. producers account for 65 per cent of the world's soybean production but we share the marketplace with keen competitors."

"A three-step approach is used to expand U.S. soybean markets," explains Seeley. "First, we identify potential markets. Second, we determine the economic needs of that country, and third, we decide how soybeans can help satisfy these needs."

He cites Korea as an example of a rapidly expanding market for soybeans, where strong economic growth boosted per capita income from around $100 in the early 1960's to over $1200 in 1978. With this affluence came a demand for improved diets which include animal protein and edible oils.

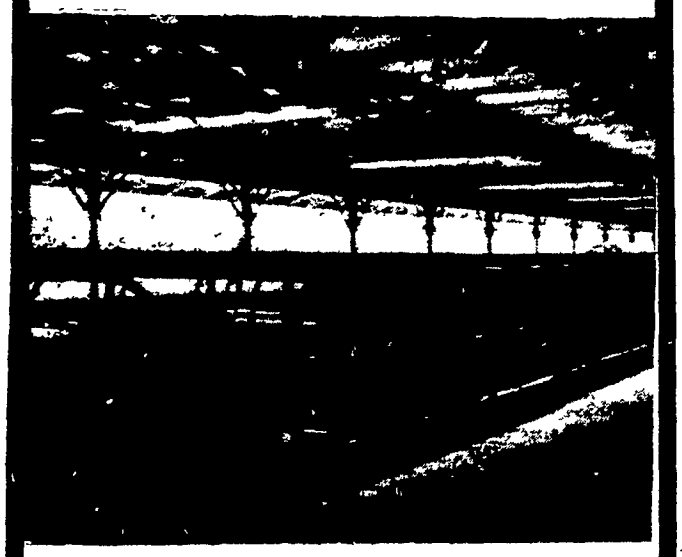
To meet the demand for animal protein, Koreans expanded livestock production. In turn, demand for feed grains and soybeans expanded to provide the necessary energy and protein source for Korean livestock. As the livestock industry continues to grow, demand for soybean meal also increases.

Korean imports of soybeans and soybean products have leaped from 58,000 metric tons (MT) in 1970-75 to 253,000 MT in 1977. Estimates for 1978 topped 330,000 MT with market expansion to over 1 million MT expected by the late 1980's.

"Potential demand for U.S. soybeans will not materialize into actual demand by itself," Seeley cautions. "ASA has worked closely with Koreans aiding in the development of the soybean processing and feed manufacturing industries. Continued market development and maintenance is necessary for long-term growth.

FREY FREE STALL

LIFETIME FREE STALL HOUSING



Cut bedding costs 75 per cent, reduce labor for barn cleaning and cow washing; reduce teat and udder injury to the minimum — house your milking herd in free stall housing. Each cow provided a stall for loafing. She won't be stepped on, the rear curb forces manure out into alley for mechanical cleaning or washing. A few minutes twice a day cleans the stalls and curbs, bedding lasts almost forever if your stalls fit the cows. Popular sizes are 6'6", 7' and 7'6". Size 'em by breed.

Our free stall partition may be mounted on wooden head boards or we make a steel divider. Set the legs in 8 to 10' concrete curbs to hold and retain bedding. Stall floor can be soil, sand or gravel. Bedding — straw, sawdust, peanut hulls, ground corn cobs, etc. Should be installed with paved alley surface 8 feet wide for mechanical cleaning or washing.

- 8 Models all steel welded farm & feedlot gates
- 2 Models all steel welded head catch gate

Spring Shorthorn sale reported above average

MERCER – With buyers from five states represented, a large crowd of Shorthorn Breeders attended the Pennsylvania State Spring Shorthorn Sale held at the Mercer 4H Park recently. Active bidding on several lots resulted in an above average sale for the area The buyers agreed with the placings of Judge Greg McKean as both champions were the top selling cattle A recent Penn State graduate, McKean is a Mercer County Angus breeder.

Both Champions were consigned by Windholme Farm, Orange, Va Windholme Robin King 917 xm, a red September 1977 son of Windholme Robin King m was purchased by Donnal D Walker and Family, Frankfort, Ind. for $1,450 Windholme Model 568d roan July 1978 daughter of Melbros Stronghold sold for $1375 to Philip Dunn and Jim Kirk, Stone Hall Farm, Huntingdon

Reserve Champion and second top selling bull at $700, Zeigler's Flag 4308 x, an April 1978 son of Mandalong Super Flag, consigned by McElhaney Stock Farm, Hookstown, was purchased by Blaine Martin, Volant

Reserve Champion female, Woodside Miss Statesman 8th, a May 1978 daughter of Acadia Dutch 24th x, consigned by Mr and Mrs. Bradley Eisminger, Woodside, Farm, Waynesburg, was purchased by Philip Dunn and Jim Kirk, Stone Hall Farm for $775

Second top selling female at $1000, Nemus Tradewind Mildew, consigned by Simmons Stock Farm, Belington, W. Va sold with a March 5th heifer calf at side by Kahoa's Charmer 44th M to Patrick Eisminger, Waynesburg

Other high selling lots included heifers consigned by Windholme Farm, Windholme Ruppee 178 at $925 purchased by Robert E. Dalrymple & Sons, Ovid, N Y. Windholme Secret 448 d at $900 purchased by Del-Don Stable, Mercer.

Volume buyer with five females was R.E. Dalrymple & Sons, Ovid, N Y. Other buyers included: Clifford McCartney, Fredonia, Robert A. Hile, Fredonia; John W. Kinglsey, Emlenton; Dave, Denise & Bridget Whting, Edinburg; John Whiting, New Wilmington; Simmons Stock Farm, Belington, W. Va.; Norman Anderson, Shade Gap; Lakeview Packing, Sandy Lake; Robert McGhee, Mercer; Enos Fisher, Greenville; Daniel Curtis, Conneaut, Ohio; and George S. Six, New Freeport.

Five bulls brought $3710 averaging $742. Nine cows brought a total of $5975, averaging $664. Fifteen heifers were sold at $10,570 averaging $705. The 29 lots which sold for a total of $20,250 brought an average of $699.

Goat club to meet

SUNBURY – Heart of Penn Dairy Goat Breeders will hold their meeting on June 10 at 2 p.m. in St. Michael's social Hall, Front & Market Streets (routes 147 & 61) Sunbury, Pa.

Since June is "Dairy Month", organizers of the group are hoping for a good turn-out for this meeting, at which organizational plans will be made.

The afternoon's speaker will be Roberta Malaro of Someday Hill Alpines, Dornsife, who will talk on "Life with your first dairy goat". This was the topic of one of her talks at the ACT '79 Fair & Conference in Washington D.C. last month. Included will be how to choose "the doe of your Dreams", basic management practices and health precautions.

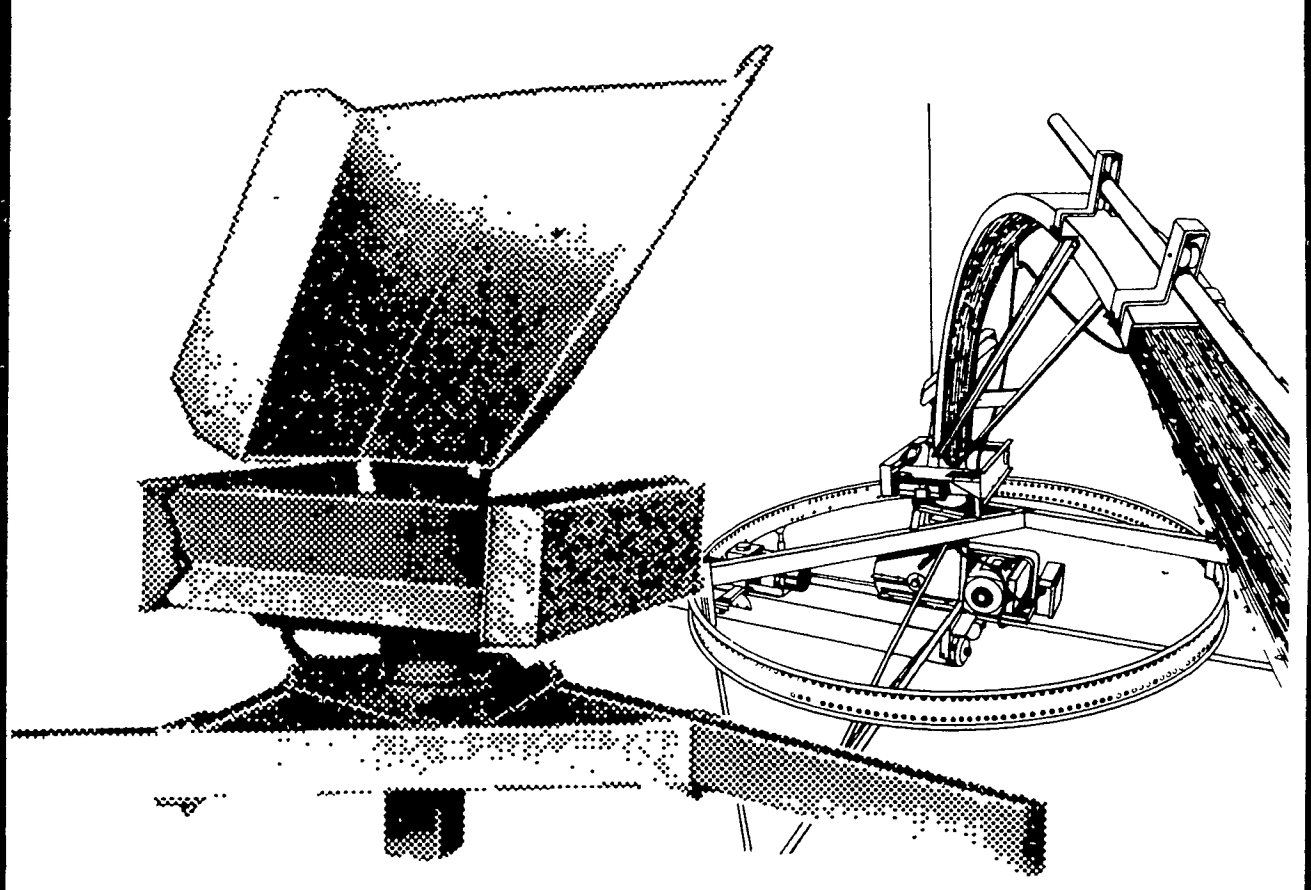
After the program there will be an open discussion period when those attending may ask questions about dairy goat husbandry or share their ideas and experiences with these capricious characters.

Refreshements will be served and all are invited to bring a sample of their goat milk specialties to share.

All dairy goat enthusiasts are welcome to attend and participate in the meeting, whether they are members or not, since one of the stated purposes of the group is to "promote the education of all dairy goat owners."

For more information on this meeting or on H.O.P. one can contact Truman or Dolly Peifer, Herndon R1, Pa. 17830 or call 717-758-3289 after 5 p.m.

Volumatic® III
silage distributor-unloader
by JAMESWAY®



Quick change-over

Another reason why all ring-drive silo unloaders are not alike: Two machines in one. Power distributor delivers silage evenly during filling for better compaction, more silo capacity. Easily changes from filling to feeding, in minutes. Distributor stores in bracket, out of the way, during unloading.

See us for systems and service that help make the good life better.

Tractor pulling contests take place every week.

NEW HOLLAND — When farmers and agribusinessmen in Holland decided to hold a tractor pulling contest last year, enthusiastic crowds came from all over the countryside to witness the spectacle of power, ingenuity, and driving skills. Some 14,000 people saw the competition.

Tractor pulling has caught on in the Netherlands, and part of the reason is that tractor pulling enthusiasts from Lancaster County, Pennsylvania helped to promote the sport overseas.

One does not need to go to Holland to see a tractor pulling contest. There are plenty of them going on right here in Pennsylvania, says Les Houck, executive secretary of the Pennsylvania Tractor Pullers Association.

Just where is the action? The May issue of PTPA **Pull Off** magazine provides the where, what, and when of the sport. According to Houck, who edits the magazine, pulls are held throughout the Summer. Track sites are in Westmoreland, Buck, Windber, Chambersburg, Harlansburg, New Enterprise, Kempton, Wellsboro, Harford, Lehman, Newville, and across the Delaware River near Flemington, N.J. A partial schedule follows:

Today, June 2, the action roars at the Buck Tractor Pulling Stadium, 10 miles south of Lancaster on Route 272. The competition begins at 6:30 p.m. Contests are held here every Saturday evening. For more information, call 717-569-3296 or 717-284-2139.

June 3 will see tactors come alive at the Windber Stadium track in western Pennsylvania. It begins at 2 p.m. Contacts there may be reached by dialing 814-754-4663, or 814-267-5785.

Tractor pulling enthusiasts in the Chambersburg area will have their own event next Friday, June 8, in a Class A mini pull. The action starts at 6:30 p.m. at the Chambersburg Rod and Gun Club, located along Route 995, south of Route 30. Additional information may be obtained by dialing 717-264-8631, or 717-263-1709.

June 8 is also the day that tractor pullers have scheduled for a show at the Lawrence County Fairgrounds, near Harlansburg. Their Class B pull gets underway at 7:30 p.m. The numbers to call for more information are 412-533-5764 or 412-342-7092.

More action is slated for Saturday, June 9, near New Enterprise. Their Class B pull gets underway at 7 p.m. Interested parties are in-

(Turn to Page 116)

Curt Stoltz of the C & E Pulling Team started off the 1979 pulling season with a win in the 5000 pound modified class at the Buck Tractor Pulls. In 1978 Curt Stoltz and Ed Brensinger, the other part of the pulling team finished in second place in the 5000 pound modified and also the 7000 pound modified class. For 1979 the C & E Team has added a twin Chevy powered Cockshutt that is running in the 7000 and 9000 pound classes. Curt and Ed are members of the Lebanon Valley Tractor Pullers Association.

WE MAKE WORMING PAY!

And Beacon does it two ways!
Beacon is finally ending all the controversy about worming. It *pays*, and we can prove it!

One way is with new BEACON PRE-FRESH, our worming conditioning feed with TBZ*. A one-time, 5-pound feeding treatment just before cows freshen effectively controls all major species of worms with no setbacks or side-effects.

Another way is with new BEACON PARA-CIDE, our feed supplement designed for use as a top-dress. It allows you to treat your entire herd at the same time, which means worm reinfection is less likely Its effective ingredient is coumaphos, a highly successful worming formula. And milk does not have to be withdrawn from the market during or following treatment.

Both PRE-FRESH and PARA-CIDE are highly palatable because they use Beacon's selection of special feed ingredients. What's more, they will increase your milk production and profits

See your Beacon dealer now He'll give you the latest news on how we make worming pay.

Beacon—headquartered in Cayuga, New York ..available throughout the northeast

ONE CALL

FOR ALL YOUR VITAMIN AND MINERAL NEEDS

Your 'International' representative can help you get more for every dollar you spend on specials for cattle, horses, hogs Ask about International's Hay & Silo Guard for hay, grains and silages.

Hay & Silo Guard Is A Unique Product
5 Reasons Why:

★ It is not only another silage additive, but a food grade product
★ It is a fermentation control saving valuable nutrients and vitamins in hay, grain and silages
★ The ingredients are a food grade product adding a preponderance of proponic acid in the rumen of cattle, needed to make more milk & beef.
★ Recent university tests prove 110 lb more milk per treated ton and 7½ lb more beef, showing a $10 00 gain for every $1 50 invested in the product.
★ By treating 400 tons of silage with Silo Guard, you would be getting $4000 00 extra off your acreage (Can you afford not to use it?)

Use International's Hay & Silo Guard as a preserve this year if you are going to use an additive Don't guess or take a big chance, ask our competitors if their product is patented

Silo Guard has a U S & Canadian Patent
It's right on the bag
(It's Proven!)

SILAGE CONDITIONER
AND
NUTRIENT BALANCER

MOPRO
THE PROFIT MAKER

MOPRO

100
LIQUID
SILAGE FORTIFIER

A revolutionary new concept in improving silages. MOPRO Liquid Silage Fortifier is formulated to balance the major mineral and protein deficiencies of silages. MOPRO is added at the time of ensiling and is applied by metering equipment with very little handling cost. MOPRO will not corrode mild steel tanks or brass fittings and has no free ammonia odor to irritate the eyes or skin. MOPRO is a homogeneous solution of ammonia salts, urea, cane molasses, and minerals (except salt and calcium) in an efficient liquid carrier It provides nitrogen for improved fermentation in the rumen and contains a mineral balance of phosphorous, magnesium, and trace elements MOPRO 100 gives a resulting silage of approximately 14 3% protein

Lanc. Co. dairy princess to be chosen June 16

By SALLY BAIR
Staff Writer

LANCASTER -- Five Lancaster County dairymen's daughters will compete to become the 1979 Lancaster County Dairy Princess at the annual pageant to be held June 16, 1979 at the Farm and Home Center.

The five are: Jill DeLong, daughter of Mr. and Mrs. Henry S. DeLong, Peach Bottom R2; Stephanie Graybill, daughter of Mr. and Mrs. Arthur Graybill, Stevens R1; Marcia Groff, daughter of Mr. and Mrs. John B. Groff, Mount Joy R3; Lucinda Landis, daughter of Mr. and Mrs. John Landis, Lancaster; and Kay Shertzer, daughter of Mr. and Mrs. Melvin L. Shertzer, Millersville R1.

Retiring Dairy Princess Joyce Stoltzfus, daughter of Mr. and Mrs. Nathan Stoltzfus, Gap R2; will crown her successor following an evening of entertainment which begins with a reception on the patio at 6:30 p.m. Dinner follows at 7 p.m.

Lucinda Landis

Kay Shertzer

Jill DeLong

Marcia Groff

Stephanie Groff

Jill, 16, will be a senior at Solanco High School where she is active in the school chorus and musicals. She attends Willow Street Vo-Tech to study as a health assistant, with plans to be a dental assistant following graduation. She is active in the youth group at Faith Reformed Presbyterian Church, and works at the Oxford Manor Nursing Home as a nurse aide. The DeLongs own about 100 head of Holstein cows.

Eighteen-year-old Stephanie Graybill graduated from Cocalico High School and will attend Lock Haven State College to study real estate and interior decorating. At Cocalico she played intramural sports, including field hockey, tennis and softball. She was in student government and participated in homecoming. Stephanie attends the Ephrata Church of the Brethren. Her family milks about 200 head of Holsteins.

Marcia, 17, will be a senior at Lancaster Mennonite High School and plans to attend a barber school to study hair design. In high school, she is a member of the chorus and student council. She is a member of the youth group at Chestnut Hill Mennonite Church Her parents milk about 73 Holsteins.

Lucinda, 17, will be a senior at Hempfield High School, and plans to become a medical secretary after graduation. She is an active member of the Lancaster County 4-H Dairy Club and is a member of the youth group at East Petersburg Mennonite Church. At school she is a member of the Future Business Leaders of America. Her parents have about 300 head of Holsteins.

Seventeen-year-old Kay will be a senior at Penn Manor High School where she is enrolled in the agricultural course She is active in both the Future Farmers of America and the Future Homemakers of America. She is a member of the Manor Brethren in Christ Church and plans to attend Penn State following graduation to study agri-business.

Tickets for the event are $7 and can be purchased from Chairmen Mr. and Mrs. Earl C. Stauffer, Weidmanville Road, R1, Ephrata, the Agricultural Extension office or any of the contestants. June 9 is the deadline for tickets.

All contestants will participate in a dairy promotion at Park City Shopping Center on June 2 from 1 to 4 p.m., and a promotion at the East Towne Mall on June 7, from 7 to 9 p.m.

Tractor pulling

(Continued from Page 112)

vited to call 814-766-2626 or 814-766-3154 for more information.

Flemington, N.J. and the Kempton Fairgrounds in Berks County are the sites of two pulls scheduled for June 15. Kempton's activities get underway at 7 p.m. For details, call 215-756-6937 or 717-386-5945. For the Flemington Fairgrounds pull, which gets underway at 7 p.m., call 201-782-2413.

Action returns to the Kempton track on June 16, 7 p.m. with farm tractor classes.

On June 17 the tractor pulling spotlight swings to the Tioga County Fairgrounds, off of Route 6, midway between Wellsboro and Mansfield. It's a Class C pull, beginning at 1 p.m. The number to call for more information is 717-549-4365.

Harford hosts the tractor pullers on June 23, beginning at 7 p.m. Call 717-434-2826 or 717-333-4241 for more details.

Advance seating arrangements are generally not required at most of the pulls, although some of the bigger events do end up with capacity and even overflowing crowds. In some localities the pulling contests are occasional events, while at others, such as The Buck, tractor pulling is a regular happening.

Apple holdings up

HARRISBURG - Pennsylvania apples in cold storage on April 30 were up 64 per cent from a year ago, according to the Pennsylvania Crop Reporting Service.

The apple holdings totaled 30,997,000 pounds or 738,000 boxes of 42 pounds each. This is 12,128,000 pounds of 64 per cent more than last year.

More York apples are in storage than any other variety, at 246,000 bushels, following by Golden Delicious at 156,000 bushels. Other varieties and the amount in storage are: Rome, 108,000 bushels; Delicious, 65,000 bushels; Stayman, 21;000 bushels; McIntosh, 3,000 bushels; and all other varieties, 139,000 bushels.

Each bushel contains 42 pounds of apples

We're fresh.

The Mix-Mill automatic grinder/mixer makes fresh feed. It grinds and mixes up to five different ration ingredients, automatically It's accurate, too. 98% to 99% accuracy on recipe proportions

A remote electrical control panel gives you finger tip command of all mill functions Operates unattended too, controlled by modern electrical timers and switches

Mixing is by auger proportioning, driven by trouble free steel gears Just dial in the proportions desired for your feed rations and let Mix-Mill do the rest. Select the exact amount of feed required day-after-day at the push of a button.

A daily ration of fresh feed generally gives diamatic increases in rates of gain So make your next move to Mix Mill

See your Mix-Mill distributor soon He's full of fresh ideas on making feed.

Nitrite action postponed

WASHINGTON, D.C. — The United States Department of Agriculture has postponed plans for substituting potassium sorbate for nitrites in curing bacon. The proposal, which would have reduced by two-thirds the amount of nitrite in bacon, was scheduled to take place two weeks ago Spokesmen at USDA say they need more time to test the effectiveness of the substitute chemical Final recommendations are expected by early July.

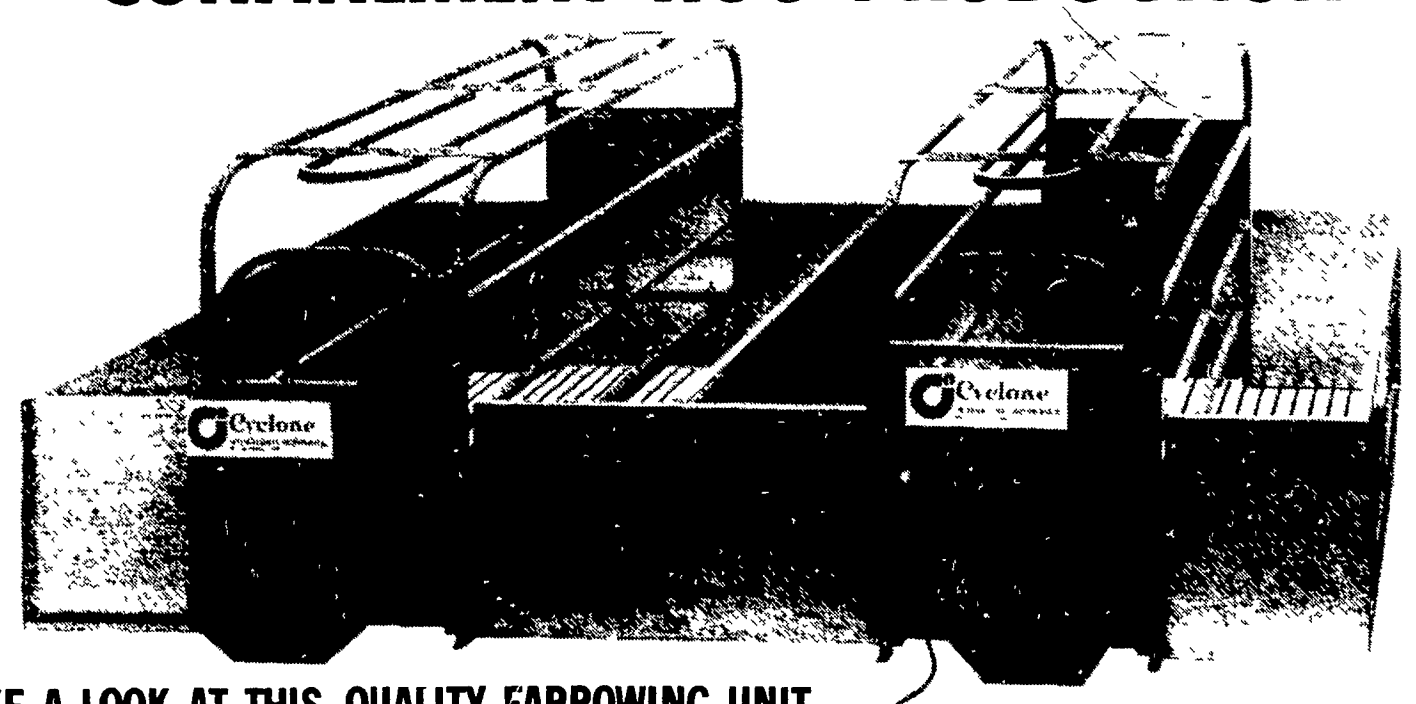
Cyclone EQUIPMENT SYSTEMS FOR CONFINEMENT HOG PRODUCTION



TAKE A LOOK AT THIS QUALITY FARROWING UNIT

Designed and constructed specifically to meet the needs of the sow, this Cyclone unit has been shown to significantly reduce mortality rates particularly when used with electric heat mats in the floor and properly placed slatted floor. It incorporates, draft panels to shield pigs from drafts, embossed for maximum rigidity and reinforced on the edges to assure stability adjustable bottom rail maximum handling ease through doors which can be opened from either direction welded steel bars, by eliminating nut and bolts, make cleaning easier 16 gauge square steel tubing with smooth edges to protect hogs from injury adaptable to either dry or liquid feeding (feed front also serves as a door) . adjustable backup bar to prevent injury of pigs at birth epoxy coated for easy cleaning and long life

Lashon Bussel busy with 4-H horse projects

By KENDACE BORRY

MANHEIM — You might say her life centers around the horses.

The president of two horse related 4-H clubs in Lancaster County, Lashon Bussell now has five horses to care for, if you count the new young foal, she added. Her stable includes four Registered Quarter Horses and 1 grade Quarter Horse type.

The daughter of Mr. and Mrs. Fred Bussell, Manheim R1, The 18-year-old young lady relates that she started riding when she was four years old.

Her grandfather had horses then and she accompanied him to the New Holland Horse Sales every Monday. Soon she was riding the ponies and a love of the animals which has developed throughout her youth was started.

"I like horses because of the challenge," Lashon related. "When you show, there is a competitive spirit, and when you work with a horse, you can mold it into whatever you want. You really can do just about anything you want with him."

This is the first year for the Lancaster County 4-H Horse and Pony Production Club, and Lashon found herself named president.

"We've had three meetings so far," she explained. "And we really started out knowing nothing. But we're being guided by our leaders, Dan and Rose Fellenbaum, Lititz; and Mike and Jean Spahn, Strasburg, and we hope to gain recognition for our club."

"Our members will be able to show at the Harrisburg State Show, after they go to the Regional Show on August 24, and qualify," Lashon added. "To go to state, your horse must qualify by quality, not by quanity. All are judged on confirmation. There is no limit to the number which can be sent to state competition."

"Right now our 4-H group is having discussions on halter breaking and other aspects of horse breaking," she continued. "We've learned about creep feeding and horse breeding management, and other topics are planned for the future."

Lashon's project in the club is called Sport, which is short for Sand Dune Pine, which will probably be the registered name for her buckskin Quarter Horse filly born March 10.

The first foal of her mare, the filly had to be bottlefed at first, for the mare didn't have enough milk.

Lashon hopes to show the filly in futurities and may sell the foal sometime in the future. Right now she is working towards taking the filly to the state 4-H competition, where she will compete in the broodmare and weanling class.

Besides her presidency in the horse production club and the Boots and Saddles 4-H, she is member of the 4-H County Council and a teen leader. She also belongs to the Circle T Trailriders, the American Horse Show Association, The Keystone Jr. and Sr. Quarter Horse Club, the Pa. Quarter Horse Association, and the Pa. Jumper Association.

While the mother watches from a safe distance, the filly "Sport", Lashon Bussell's 4-H Production Club project, takes an active interest in everything around it.

This year her efforts are spent on showing Jet's Miss Bandero in Western Pleasure classes, and she is also starting her as a hunter. She also shows Jet's Mr. Tracer as a jumper. She competes in both open and Quarter Horse shows.

In a few short days she will graduate from Manheim Township High School. In the Fall, she will be attending Delaware Valley College, where she will major in animal science. She hopes someday to go into the full-time training of horses.

Lashon thinks a great deal of her success with her horses can be traced to two people who helped her. She said that she attended riding clinics given by Bob Allen, a noted horse trainer, and credits John Weaver, a personal friend, for her horsmanship ability.

A member of the National Honor Society in school, she has also been named Miss Appaloosa Knowledge in the past, and has won several championships in 4-H competition

She and her family will soon be moving to Montgomery County where she will be able to commute to college. But her horses will travel to her new home with her, and she will continue her riding and training, because, well, as Lashon would say, horses are just a big part of her life.

Competing in a show, Lashon and her mount, Jet's Miss Bandero, clear the jump in a Hunter class.

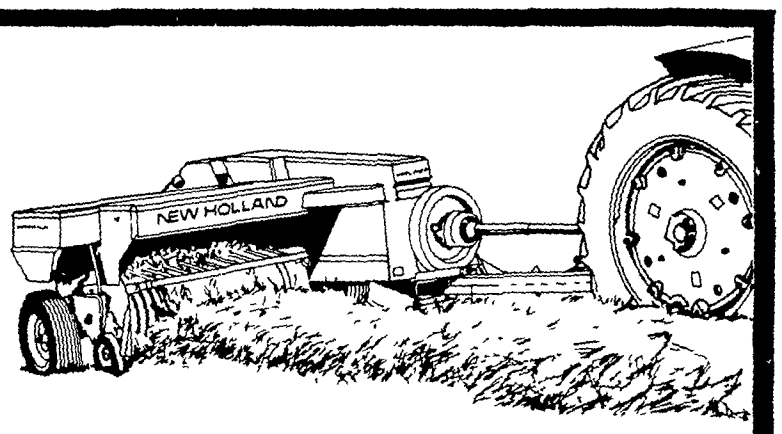
Try to find a better value baler.



The Model 310 baler from Sperry New Holland.

- 75 strokes per minute for tight, uniform bales
- Dependable knotter adjusts for various twine diameter
- Flow-Action® feeding system for better bale shape
- Choice of standard or Super-Sweep pickup
- 14" x 18"

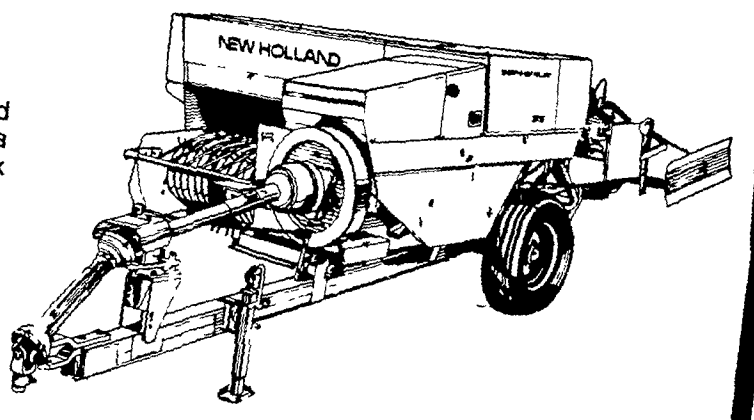
Trade that old baler now. . . we're ready to deal.

The Model 315 baler

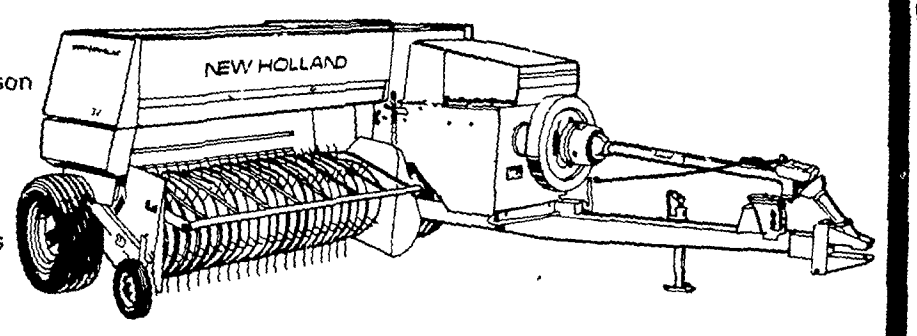
Stop in and get a great deal on the Sperry New Holland Model 315 Baler This 14" x 18" baler is built extra rugged to handle tough crops It's designed to work hard and give years of dependable service

Now's the time to buy because we're moving our complete stock of hay tools

We service what we sell!



- Designed and built for the big-volume hay growers and custom operators who make many thousands of bales each season
- Makes ideal bales for mechanical bale handling
- Top of 14" x 18" line
- Famous Super-Sweep pickup is 75 inches wide and is offset to let today's wider tractors drive beside the windrow, not on it



The bigger the job, the happier you'll be with a Sperry New Holland baler See the capacity of the Model 320 for yourself

The Dairy Business

By Newton Bair

SAVE THE GREEN STUFF

You don't have to go to Las Vegas or Atlantic City to gamble. Just mow down a field of alfalfa for hay and your odds for a perfect harvest begin to slip. It's a risk we all must take this time of year, so we had better look at some of the ways to throw the odds in our favor.

Alfalfa and grass mixtures for dairy forage are generally harvested by one of three methods: silage, haylage or field cured hay. The major difference between the systems is the dry matter (DM) content at time of storage. Silage is any forage that is chopped and stored in a silo at 30 to 40 per cent dry matter. Haylage is chopped and stored in a silo at 40 to 60 per cent dry matter. Hay is forage dried in the field at 75 to 80 per cent dry matter. (In storage, hay will cure to about 90 per cent DM.)

All other things being equal, there's very little difference in the final product as fed to your dairy cows, when you allow for the extra water in the silo materials. Except for the harvesting risks, which are inherent in all systems.

I don't need to tell you that the biggest risk factor in harvest season is the weather. It's tough to find a season that will give us the best of both worlds– plenty of rain to grow it, and lots of sun to cure it. So we can only take a good look at our techniques and try to sort out the ways of minimizing the risks.

The type of harvest system affects the amount of dry matter lost during harvest. Furthermore, the dry matter lost during harvest is directly related to the dry matter content at harvest. Since field cured hay is 75 to 80 per cent dry matter, the harvesting loss of dry matter will be somewhat greater than what would be lost in silage or haylage.

Most harvesting loss results from leaves and small stems shattered during harvesting operations. This is a serious matter, since the leaves the fine stems contain the high quality protein and other nutrients. Field cured hay can lose 20 to 30 per cent of the nutrient value, most of which is the result of shattering of dry leaves in mechanical handling. Since haylage and silage is handled at a higher moisture level, fewer leaves are lost.

So, the silo salesman will decide to hedge their losses by putting up haylage or silage instead of field cured hay. No problem with this, it's great feed when harvested early and wilted to about 50 per cent moisture. But, the fellow who likes to make hay can also have top vesting time. It it better to delay cutting than to suffer rain damage. 3. Mowing windrowing and baling: Mowing followed by conditioning reduces drying time and field losses each by about 50 per cent. If windrowing is necessary, moisture content should be greater than 30 per cent. Below this level, the plant shatters. Begin baling at about 20 per cent moisture. Hay can be stored safely at this level and further field drying occurs. For all operations, use the proper ground speed. 4. Store bales immediately: Bales which are rained on in the field often have to broken to dry and rebaled to allow safe storage. Never bale more than you can handle safely if rainfall is imminent.

quality feed. That is, if he follows a few common sense rules, and gets a little cooperation from the weather.

Here are a few common sense rules to reduce harvesting losses: 1. Keep equipment in good condition: Faulty equipment (unsharpened mower blades, broken sections and missing rake teeth) leaves forage in the field. Check each piece of equipment, both to insure top-notch performance and to reduce losses and likelihood of equipment breakdown during operation. 2. Check weather forecast daily: Weather conditions during harvesting are critical. Rain damage not only lowers quantity and quality but increases the total har-

Keystone Klassic has 295 entries

YORK – Some 189 young Angus breeders from 16 states have entered 295 heifers in the Eastern Regional Junior Angus Heifer Show set for June 30, at York, reports Dean Hurlbut, director of activities for the American Angus Association. The show entry deadline was May 15.

The show will be at the York County Fairgrounds, and has been named the "Keystone Klassic", according to Dick Beck, regional manager for the American Angus Association in Pennsylvania. This is the seventh Eastern Regional Junior Angus Heifer Show, and the first to be held in Pennsylvania, Beck said.

An Illinois Angus breeder Gary Dameron from Lexington, will judge the show. Dameron is also president of the Illinois Angus Association.

The cattle will begin arriving at the York County Fairgrounds on Thursday, to become adjusted to their new surroundings and to allow time for their young owners to groom and prepare them for the show. On Friday, June 29, there will be a free bus tour of Gettysburg Battlefield. That night the Pennsylvania Angus Association will provide and serve an Angus roast beef meal for all the exhibitors and their parents. Later there will be entertainment by the Pro-Sounds Unlimited.

The show begins promptly at 8:30 a.m. Saturday morning, June 30. Pennsylvania Secretary of Agriculture Penrose Hallowell, will welcome the group as will Walter Laird, Dover, president of the Pennsylvania Angus Association, and Dale Reins, Mercer, president of the Pennsylvania Junior Angus Association. The grand champion heifer will be selected about mid-afternoon.

ARCADIAN® liquid gives a profitable boost to alfalfa after the first cutting.

(Insecticide can also be added)

Give alfalfa a liquid boost after the first cutting
That's when topdressing N-P-K, and micronutrients in an Arcadian® liquid fertilizer made with POLY-N® pays big dividends in high yielding, high quality alfalfa You can even add pesticides if you need to

When it's done right, a topdressing after the first-cutting will increase the yields of later cuttings It will raise the protein content Help the crop compete better against grasses And improve the vigor for a long stand life

Arcadian liquid makes it easy Made the SLF® way, Arcadian liquid gives you uniform distribution of fertilizer ingredients from start to finish It's truly the efficient way to turn alfalfa into green gold

Motorola helps NTPA

UPPER SANDUSKY, Ohio – Motorola Communications and Electronics, Inc. of Schaumburg, Ill. will again support the National Tractor Pullers Association in 1979 by supplying high frequency two way radio equipment for pull communications.

Although the Motorola program does not involve payment of any kind to competitors, the communications equipment supplies for the 1978 season resulted in speedier, more smoothly operated events, with the nearly one million spectators viewing a better quality of program.

Motorola will again be supplying twelve Series MX300 "Handi-Talkies" two way radios for "on-track" communications, plus two "Converta-Com" mobile units for use in the NTPA trucks, which will allow inter-vehicle communications over a 75 mile range.

The pasture is a definite part of the feeding program at Marbet Farms, near Annville, Lebanon County. Checking up on some of the heifers is Clyde Myers, one of the partners in the family operation. Lancaster Farming photo by Dieter Krieg

This dairy herd averages 700 lbs.

By DIETER KRIEG

ANNVILLE — One of the higher producing Holstein dairy herds in Lebanon County is the one of Marvin Meyer and Sons, Annville. A family operation, their 79 head are currently averaging 19,130 pounds of milk and 707 of butterfat.

They, like many other dairymen, have come a long way over the years.

Ten years ago, for example, the Meyer family was milking 66 cows for an average production of 14,801 pounds of milk and 557 of butterfat per cow. Production climbed steadily each year. In 1977 they topped the DHIA field in Lebanon County with a 708-pound butterfat average. Last year they were fourth with 701 pounds.

According to the herd's owners, Mr. and Mrs. Meyer, and sons Clyde and Jim, good feed is the key to good production. "We just try to make good hay and haylage and roughage," said the elder Meyer during an interview this week.

The feeding program at Marbet Farms (named after

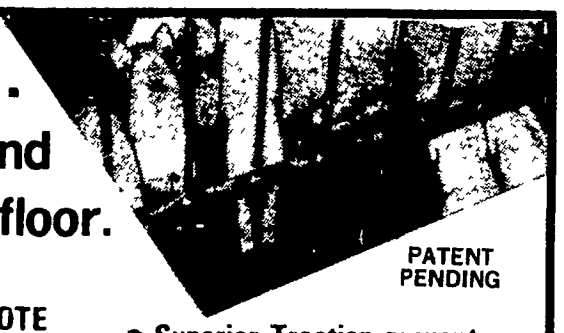
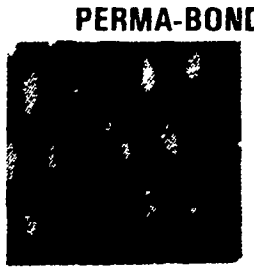
Tenderfoot™
the Tough, Tested and Proven "pig-saver" floor.



PATENT PENDING

PERMA-BOND* KOMFY-KOTE CONSTRUCTION



A tough acid-resistant plastisol compound **permanently bonded** to a rugged steel mesh

*An exclusive bonding process developed by Tenderfoot

- Superior Traction prevents injuries and abrasions.
- Cushioned comfort reduces stress.
- Self-cleaning. No holes or crevices to harbor bacteria.

HOW LONG WILL THEY LAST?

First produced in 1975, Tenderfoot was tested in farrowing pens for 1½ years before being marketed These original floors have been in constant use ever since WITH NO APPRECIABLE WEAR! Today's Tenderfoot floors have **6 advantages** over the original pieces

1. **3 times more coating.**
2. **Tougher vinyl coating**
3. **Extra-strength steel**
4. **Treated to resist bacteria & fungi growth.**
5. **Improved Perma-Bond processing.**
6. **Strict quality control**

Constant research development and quality control continues at the Tenderfoot factory and at the nearby 650-sow operation where the original 1975 Tenderfoot floors are still going strong

How long will a Tenderfoot last? No one knows The very first ones produced have withstood heavy use since 1975 with **no appreciable wear** The floors produced today are **6 ways better** than the first ones **On the basis of these facts it seems safe to say that any concern over the durability of Tenderfoot flooring is unnecessary**

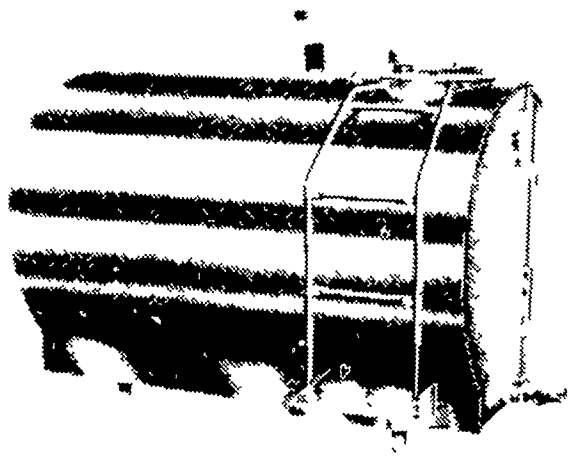
AGWAY

THE TRUTH . . .

ABOUT SAVING MONEY IN THE MILKHOUSE FROM AGWAY



800 GAL. GIRTON AMBASSADOR

FACT #1

Your bulk tank may be working fine — but robbing you blind.

HOW?

1. An undersized tank can DOUBLE your hot water bill.
2. An undersized tank can DOUBLE your detergent bill.
3. An undersized tank can LOWER your fat test significantly.
4. An undersized tank can ADD significantly to your hauling cost.

FACT #2

A precooler, using your well water will pay for itself in 10 years, or less (at today's electric rates)

1. The top 20-25° comes off your milk in LESS than ½ minute BEFORE the milk even gets to the tank.
2. Compressor running time can be cut up to 50%.
3. Agitation time — bad for milk quality, and sometimes a factor in lower fat tests — is reduced up to 50%.

FACT #3

An Agway Topline Heat Reclaimer will save about 30% of your cost of heating water without making your compressor work overtime (as some heat exchangers do).

1. 30% sounds like a lot — and it is! The **TRUTH** is, the right size BULK TANK and a PRECOOLER should come first. They WILL SAVE YOU EVEN MORE!

FACT #4

NOW is the time to call AGWAY about saving money in YOUR milkhouse.

1. Hot weather is when undersized bulk tanks are most expensive and most likely to need servicing.
2. Hot weather is when a PRECOOLER saves you most in cooling costs.
3. Hot weather is when your fat test drops most from excessive agitation.
4. NOW - FOR A LIMITED TIME - PRICES on the larger size GIRTON AMBASSADOR tanks (1000, 1240, 1500, and 2000 gallon tanks) ARE REDUCED through AGWAY as much as $500.
5. Telmark lease arrangements are especially favorable. You MAY even find your savings will cover the lease payments.

Agri-Lease

Agway's own leasing plan.

Travel booklet offered

MECHANICSBURG – An all new and concise guide for Pennsylvania tourists is now available free of charge. Issued by the Pennsylvania Attractions and Travel Assocation, it is a brochure illustrating the outstanding attractions in the Keystone State, arranged by geographic regions. Included is a state map which locates the various attractions by number, indicates the tourist information centers, shows the U.S. and Interstate Routes, and for the convenience of campers, approximates the location of many of our state parks.

One section of the folder consists of full-color photos and brief descriptions of the whole range of approved attractions - caves and caverns, miniature villages, museums, Penn-Dutch farms and homesteads, steam railroads, storybook parks, waterfalls, wild animal farms, and other vacation sites. These attractions subscribe to the standards for quality as set up by their association.

Free copies of this brochure may be obtained by writing to Pennsylvania Attractions and Travel Association; Dept. A, Box 23; Mechanicsburg, Pa. 17055.

Six Good Reasons to Roll Your Own

with the all-new Vermeer 1979 Balers

(1) **Economy** It's a one-man system
(2) **Speed** About 1900 lbs every four minutes by yourself

Iowa congressman says crops for fuel program would not conflict with food and feed interests

By DIETER KRIEG

WASHINGTON, D.C. — Congresman Berkley Bedell, leader on Capitol Hill to get this country moving with gasohol, says that the adoption of a significant alcohol production program cannot be justifiably opposed on the grounds that it would detract from this nation's food production capabilities.

Rather, he believes that the technology exists to offer people and animals more protein despite the fact that some crops such as corn and wheat may be used to produce a fuel grade alcohol. This alcohol is then used at a rate of one gallon per nine gallons of unleaded gasoline to produce gasohol.

According to Bedell, there is a way, by means of a front-end fracturization unit, to extract edible protein for humans at the very start of the distillation process. Also, the by-product of alcohol extraction, commonly known as distillers' dried grains or brewers' grains, has been proven to be a very efficient livestock feed.

Research at the Distillers' Feed Grains Research Council, based in Cincinnati, Ohio, concludes that beef cattle will gain 13 per cent more weight on a ration incorporating brewers' grains. Lactating animals are said to produce up to 10 per cent more milk, according to the study, which was done by Dr. W.P. Garrigus in 1955 and has since been verified by the University of Nebraska.

Bedell told a recent congressional committee that "the most important part of the answer to the 'food vs. fuel' question lies in the characterization of the byproduct," (distillers' grains). "Well-documented studies by respected universities an other research institutions have shown conclusively that the by-product is a very effective protein supplement," he asserted.

Berkley Bedell

The Iowa congressman, who serves on the House Agriculture Committee, does not believe the extra production of distillers' grains will adversely affect the remainder of the livestock feed market. He noted that present production of distillers grains in the U.S. is only 425,000 tons per year. He reasons that there is still "a great deal of margin for increased production before markets are saturated." Also, he adds that the world is short of protein, and the distillers' grains could help to meet the demand for protein in the area of cattle feeding.

Speaking last month before the Joint Subcommittees of the Committee on Agriculture on Gasohol Legislation, Bedell observed that the Europeans place a premium on distillers' grains and while their respective governments place a levy on ordinary grain imports, it is waived for distillers' grains. "Some people argue that this is an indication of the premium value enjoyed by the high-protein by-product because of its feeding characteristics. Whatever the reason, there is strong justification for the claim that significant export potential exists for the by-products of the alcohol production process," he said.

Bedell, the main sponsor of legislation which would commit the U.S. government and American agriculture to gasohol production, admits that the program would not "constitute a total solution to the national energy problem."

"However, it can go a long way towards lessening our dependence on imported oil," he explained. "It must be remembered too, that this proposal would enhance a widespread construction of alcohol production facilities. While these plants would utilize our farm surpluses initially, they may be modified to convert cellulose matter should our surpluses be eliminated. Once plants have been modified for cellulose production, they can convert crop residues, forest waste and garbage to alcohol. The technology for cellulose conversion on a chemical scale is thought by many to be just three to seven years away. This is significant, since experts, including the American Society of Agricultural Engineers, point to the availability of enough renewable cellulose on American farmlands alone to produce the equivalent of 688 million barrels of crude oil annually," he explained.

Bedell's proposed legislation, H.B 3905, would set up a program geared to make use of America's agricultural power for conversion into useable energy in industry and transportation According to David Hallberg, Bedell's special assistant and resident authority on gasohol, the bill is "moving pretty well" Bedell, among others, including citizens' groups and individuals are mobilizing support for gasohol on both sides of the Capitol. There is speculation (and a definite drive) to have the measure pass both Houses before Congress recesses on Oct 1

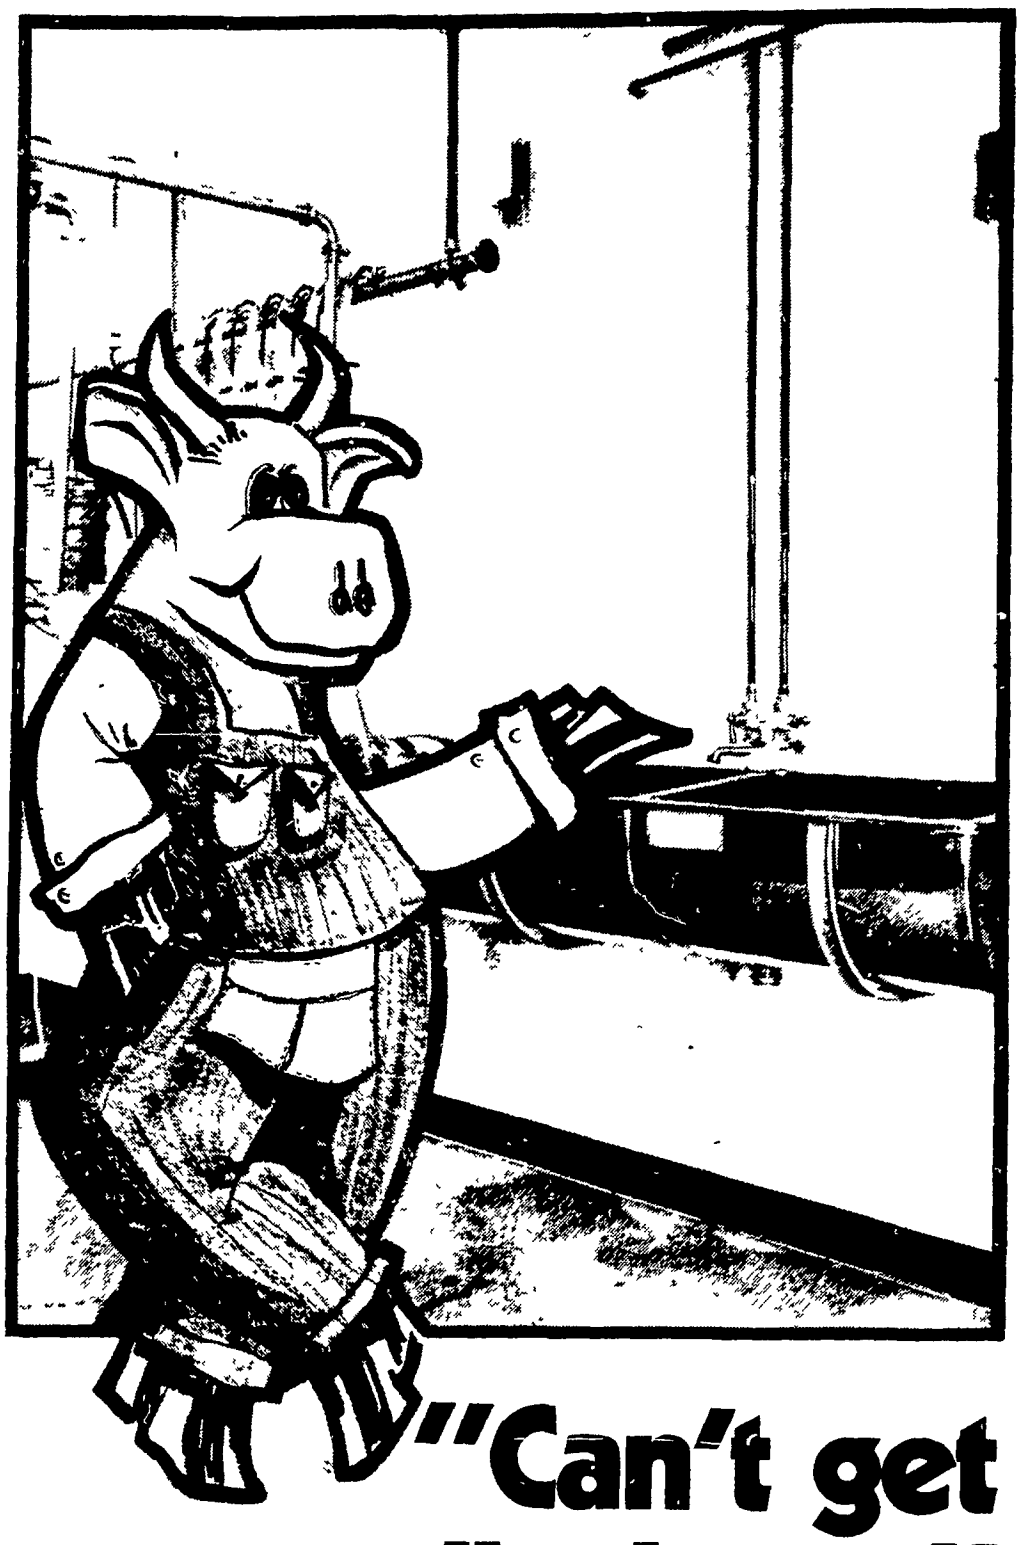
There are some clouds on the horizon, however.

Hallberg says that Bedell and other supporters of gasohol are disappointed with the less than exciting support that's being shown by the United States Department of Agriculture.

"We don't think they're doing their homework - they're far too cautious, and probably a little biased," said Hallberg.

USDA Secretary Robert Bergland is said to be unconvinced that alcohol from corn is promising. He says it would take more energy to produce it than it would be worth. He favors wood chips for the distilling process.

But Bedell's office remains encouraged on the whole "There is a lot of support out there," Hallberg concluded



"Can't get your walls clean?"

Kemlite's GLASBORD® frp wall panel cleans up easy!

- Moistureproof
- Shatterproof
- Will not rot or mildew
- Rustproof
- Stain resistant
- Cleans simply/quickly
- Dentproof
- Odorfree
- U.S.D.A. accepted

Glasbord panel is a tough, semi rigid wall lining material of fiber glass reinforced plastic – superior to metal and painted finishes It installs easily in any type construction and is suitable for building new or refurbishing Available in a variety of sizes, complete with all accessories Also available with low smoke development, fire retardant properties Ask about low smoke Fire X Glasbord paneling

Dairy herd

(Continued from Page 117)

Marvin Meyer and his wife, Betty), is primarily corn silage, haylage, and hay The Meyers have been on an alfalfa haylage program for several years It's fed once a day at a rate of about eight pounds per cow Corn silage is fed at an average of 27 pounds per cow, and alfalfa hay is given to the herd according to production and seasonal forage requirements. It averages out to about eight pounds per cow per day, said the elder dairyman

A home-made grain ration balances the nutritional needs of the herd. It consists of shelled and ear corn, oats, wheat, soybean meal, minerals, salt, and vitamins. It's fed according to production and is available in two separate batches One is for cows in the high group (over 75 pounds of milk per cow per day) and the other is for those producing between 55 and 75 pounds per day. Cows producing over 94 pounds of milk per day receive the same amount of grain, but varying amounts of top-dressed soybean meal

To insure proper nutrition, the Meyers have their forages tested monthly at a cost of $10 per sample. It's a management tool which not everyone favors, but the elder Meyer concludes. "We can hold roduction much better." Son Jim, who is in charge of feeding, notes that the calcium and phosphorus balance varies frequently during the year and testing will help to smooth the variations from month to month.

According to these Lenbanon County dairymen, it pays to have feeds tested regularly. It saves the expense of over-feeding, they say. "You know what you need," the elder Meyer assured. By phone it takes about six to seven days to have feeding recommendations returned from the testing laboratory, he said, noting that it takes a couple days longer by mail.

The testing program gives an analysis of crude protein, calcium, phosphorus, magnesium, fibre, nitrates, heat damage, and moisture.

But high quality feed alone won't put the high volume of milk into the tank, the dairy farm family agrees.

It also takes good breeding and management, explained Clyde. He and his family partners agree that it all starts out with sound planning at breeding time, and thoughtful care throughout the time that the animal is on the farm.

While none of the family members are particularly concerned about being present in the maternity pen at the time that birth might take place, they do make every effort to give the new-born calf prompt nourishment. The calves receive colostrum for a couple of days and are then put on a diet of whole milk for the next three to four weeks. "I don't think we fed more than a bag of milk replacer in 33 years that I've been in business," Marvin Meyer commented

Cold water is introduced to the calves at an early age - 3 or 4 days. Meyer believes that cold water after warm milk accomplishes two things: It discourages sucking, and encourages nibbling at solid feeds. Their forage and grain ration is montitored through tests, just as it is for the milking herd, dry cows, and older heifers.

Heifers are bred to freshen at about 28 months of age and are estimated to weigh a good 1200 pounds at that time. The avarage calving interval at Marbet Farms is just over 13 months Some of that delay is due to occasional problems, although deliberate later inseminations are also a factor.

Van Houweling to be new NPPC liaison

DES MOINES, Iowa - Dr. C. Donald Van Houweling, D.V.M., formerly director, Bureau of Veterinary Medicine, Food and Drug administration, and special assistant for FDA Commissioner Kennedy on agricultural affairs, has been named new director of government affairs for the National Pork Producers Council.

Van Houweling, 60, a Mahaska County, Iowa, native will assume his new position June 4.

Orville K. Sweet, NPPC executive vice president, said the Council is fortunate to have obtained the services of Van Houweling who has a distinguished background in the animal health field and is a veteran of the Washington scene. "He is," Sweet said, "well-known within government and the livestock industry, and very much at home in research circles. Van Houweling will," Sweet added, "serve as a liaison for pork producers in Washington and will retain his residency there."

Proposed brucellosis program outlined

WASHINGTON, D. C. – The Livestock Health Council told a Senate appropriations subcommittee recently that the federal government's brucellosis eradication program should place greater emphasis on four areas of disease control.

These are cattle vaccination with "Strain 19" vaccine; additional research in vaccine, vaccination, supplemental tests and testing procedures; an indemnity system keyed to the replacement value of diseased livestock, and better surveillance at the slaughter house.

In addition, the Council testified it would not oppose the U.S. Department of Agriculture's 1980 budget request of $65 million for the program, if the Animal and Plant Health Inspection Service (APHIS) did not implement its proposed changes in the Uniform Methods and Rules (UM&R) for brucellosis eradication.

These changes, the Council said, "might be epidemilogically sound to the scientific world but are totally unfeasible and impractical to the cattle industry."

The proposed changes include, among other things, a dealer licensing and registration law; would lower the age of test-eligible cattle from 24 to 12 months; would require "S" branded cattle to also wear an eartag, and would burden the livestock industry "with a tremendous amount of record keeping" and additional costs.

If adopted, the proposed changes "would change normal marketing practices of producers, interrupt the normal flow of cattle in marketing channels and most likely would bring about a total rejection of a brucellosis eradication program by the commercial beef segment of the industry," the Council said.

The Council also said APHIS' proposals do not agree with the "philosophical objectives and spirit" of the National Brucellosis Technical Commission report on the brucellosis program. This report, released last Fall, had three major objectives, the Council testified. These are:

A lessening of government regulations and responsibility in the administration of the brucellosis program;

Greater individual accountability conditioned upon economic incentives and individual management responsibility;

Flexibility in administration and application based upon regional production and marketing patterns.

The Council said it intends to "maintain a constructive position on this issue, as it has from the outset," but that any brucellosis eradication program must have the confidence of the livestock industry before it can be implemented.

The testimony came before the appropriations subcommittee on agriculture, rural development and related agencies, which had invited the Council to testify on the eradication program and the budget request. The statement was delivered by Council Vice Chairman Dr. George Stiles, on behalf of Chairman Raymond Schnell and Executive Officer Clifford R. Boucher.

The Council is the arm of Livestock Marketing Association, Kansas City, Mo., which speaks for the marketing sector in animal health matters.

Pa. fieldwork one week ahead of last year

HARRISBURG – In spite of showers in the week ending May 20 in the commonwealth, fieldwork remains a week or more ahead of last year, according to the Pennsylvania Crop Reporting Service.

Five days were suitable for fieldwork, with soils generally in good working condition. Soil moisture was rated mostly as adequate. Some operators welcomed rain as soils were dry in some areas and crops had begun to show moisture stress.

Plowing is now 92 per cent complete, 12 days ahead of the 82 per cent last year. Progress stands at 85 per cent in the north, 94 per cent in central counties and 92 per cent in the south.

At 15 per cent planted now, compared to five per cent a year ago, soybeans are eight days earlier this year The north shows five per cent sown, central counties are at 23 per cent with the south at ten per cent.

Oats are now virtually all sown. This puts them 10 days ahead of 88 per cent a year ago. Growth and stands are very good except for a few areas where moisture is needed.

Potatoes, at 78 per cent planted, lead last year's 67 per cent by 10 days. The crop is planted in the south, 88 per cent is done in central counties and 56 per cent in the north.

Corn is now 68 per cent planted, 11 days ahead of the 32 per cent a year ago. The average for this date is 51 per cent. The north reports 54 per cent, central counties have planted 78 per cent with the south at 79 per cent. Some corn is reportedly in the four leaf stage, with numerous reports of germination five to seven days after planting.

Barley is now one-half headed, 12 days ahead of 13 per cent last year. The north reports 23 per cent headed, central counties are 53 per cent, with the south at 73 per cent. Straw is reported short to medium in length. Wheat is 18 per cent headed with 54 per cent in boot. This puts it nine days ahead of last year when none had yet been reported heading.

Pastures are providing an average amount of feed. Alfalfa hay stands are reported in good condition with clo-tim in mostly good to somewhat fair condition. Only a little alfalfa has been cut, mostly for silage. The little cut is of mostly good quality. Alfalfa weevil and spittlebug are active.

Peaches and cherries are mostly past bloom but apples are rated ten per cent pink and 90 per cent in or past full bloom.

Rye in corn found profitable

Last Fall the Lewisburg Young Farmers, under the direction of John Liggett, conducted a helicopter demonstration by sowing rye in standing corn. The program was conducted as a soil conservation practice which would lead to improved tilth and soil conditioning. Dick Criswell, of Lewisburg R1, is about to plow down this rye cover crop which proved quite successful. In fact, two strips were good enough to save for the combine this July. The Young Farmers concluded sowing rye in standing corn is a profitable practice.

Farm protection act approved

HARRISBURG — A bill, SB 276, to prohibit condemnation of prime farmland for highways or solid waste disposal sites without permission from a special review committee has been approved by the Pennsylvania Senate and is now in the House Agriculture Committee. The measure would establish a committee consisting of the secretaries of the following departments: Environmental Resources, Agriculture, and Transportation, as well as the governor and two active farmers.

FARM SAFETY

LMA says proposal to pay USDA witnesses 'not in public interest'

KANSAS CITY, Mo. — Livestock Marketing Association (LMA) has told the U.S. Department of Agriculture that its proposal to reimburse participants in rule making procedures is not in the public interest and is unlawful.

In a statement filed with the Department, LMA said it is "fundamentally unfair for the Department 'fund' one side of the public sector against another."

Stating that it sees no fundamental conflict between the agricultural and consumer sectors, LMA said the proposal "runs the very real risk of setting one interest group against another, to the advantage of neither."

LMA said it did not feel the Department "would necessarily 'load' or 'stack' hearings with witnesses whose views may happen to coincide with a particular agency's viewpoint." But, the statement continued, "The very human tendency to solicit witnesses who support the agency's preconceptions is understandable if not permissible.

"The temptation mounts when such witnesses may need to be reimbursed before they are willing or able to testify Certainly in these situations, the Department could simply solicit written comments," LMA said.

LMA also said "there is no definitive, substantive legal support" for the proposal The authority cited by the Department "will probably result in protracted litigation and continued attempts by the private sector of the agriculture industry to mollify the position suggested by the Department.

"It would appear that the *only recourse* available to clarify this legal confusion is for the Department to go to Congress and to obtain explicit authority and appropriations to fund such authority" so that participants in rule making proceedings can be reimbursed, the statement said.

By contemplating such a proposal, the statement said, "the Department appears to be on a perilous course." LMA provides business services to over 1300 livestock markets, dealers and brokers in the U.S. and Canada.

Chavez challenged by migrant farm worker

By REED LARSON
National Right to Work Committee

FAIRFAX, Va. — Cervando Perez is an unlikely candidate to lead a crusade for human rights.

He's not charismatic (in the political sense of the word), nor is he a Danton-like orator who can incite the masses to storm the Gates of the Bastille.

(In fact, Cervando Perez speaks very little English at all.)

Worse yet, he has no Ethel Kennedy marching chicly by his side, or Jane Fonda raising a fistful of dollars on his behalf.

Still, Cervando Perez is a crusader. And his courageous crusade may mean freedom of choice for thousands of migrant farm workers now forced to surrender unto Cesar Chavez.

Few episodes in the history of the trade union movement have been as grossly — and intentionally — distorted as the attempts of Cesar Chavez to conscript farm workers into his union in the mid-1960's. Adored by a press searching for a hero, and courted by politicians searching for votes, Chavez quickly became a cause celebre.

Despite his being a "leader" without a following, Chavez and his small, but well-trained, cadre of professional organizers elevated the United Farm Workers Union (UFW) to a position of prominence in the national media. Then, using a carefully orchestrated campaign of violence and intimidation against the very workers they claimed to represent, they forced the California grape growers to cave in to their demands.

Chavez's number one demand: a compulsory union shop. Not an "agency shop" where workers must pay union dues in lieu of full union membership (an abomination in itself). But a full union shop, where workers must become full union members in good standing if they wish to keep their jobs.

The demand was met when the growers — putting empty hopes for "order" in the fields above their workers' pleas for freedom of choice — helped Chavez pass California's Agricultural Labor Relations Act (ALRA).

Signed into law by an always-eager-to-please Jerry Brown, the ALRA empowers Chavez and his lieutenants to force an employer to fire any employee the union wants fired for any reason — or for no reason at all.

Chavez's UFW is the sole judge of who is "a member in good standing." And anyone adjudged to be in "bad standing" — for whatever reason — can be ordered fired. The employer has no choice, and the worker has little hope.

That's just what happened to Cervando Perez.

Under UFW Resolution 45, all farm workers bound by UFW agreements are required to work the first Sunday in June (the so-called "Citizenship Participation Day") and turn over their full earnings to Cesar Chavez's "Citizenship Participation Committee." The hundreds of thousands of dollars Chavez garners from this rip-off is then divided up among the campaigns of Jerry Brown and other politicians who will in turn promote more of Chavez's compulsory unionism schemes.

Perez objected to this extortion. He objected to seeing his hard-earned dollars taken from him and given to candidates and causes he often opposed. He said he'd rather keep his pay.

So on July 26, 1978, Perez's employer got the letter all farm workers dread.

"The (UFW) ranch committee ..." it began, "has found Cervando Perez to be a member in bad standing ... We therefore refer you to Article 2 of the Contract which states that any member who has been determined to be in bad standing by the union ... shall be discharged."

"Thank you," the letter concluded gratuitously.

Within two weeks, Perez, the young father of a 1½ year-old daughter, a conscientious farm worker with five years' experience, was summarily fired from his job.

But to Cervando Perez, born of strong Mexican stock, and used to fighting for his place in the sun, this was not the end. Perez instinctively knew that his firing was simply wrong. He was convinced that Chavez's political extortion scheme violated basic human rights. So, with the help of the National Right to Work Legal Defense Foundation, Perez bravely filed charges with the California Agricultural Labor Relations Board (ALRB) against the UFW.

On Tuesday, April 17, the Board ruled that Perez was right. Chavez, they declared, had violated both the U.S. and California constitutions by forcing farm workers to pay for the union's "political, idealogical, social welfare or charitable causes." Perez, the Board ruled, should be restored to his job with commensurate back pay.

But that ruling was only the beginning. Before Perez can return to work, the case must go before the ALRB General Counsel. And, perhaps, after that, to the courts as well.

Obviously, it won't be easy to beat Cesar Chavez and his star-studded retinue of well-heeled radicals. For Cervando Perez, it will be, as the Scarecrow told Dorothy, "a long journey through a dangerous country."

But in the words of the thousands of farm workers who will follow his progress with hopeful eyes, "Venceremos! ("We will win the fight!") Cervando Perez!"

Let's talk double-cropping today.

Believe it or not, with ORTHO Paraquat CL you can harvest and plant a second crop the same day. Plant right into the stubble without mechanical tillage. Used with ORTHO X-77® Spreader and a good residual herbicide, you get season-long control of weeds and grasses. Come by and see us today. We've got all the information on how to make double-cropping work.

ALL AIR-COOLED DIESEL ENGINES ARE NOT CREATED EQUAL.

It's easier to call an engine "heavy duty" than it is to build it that way Superior performance and long life are the result of special alloy heads, integral lube coolers, oil-cooled pistons, and the Deutz highly efficient axial-flow cooling blowers These features plus 100% direct air-cooling result in substantial fuel savings — 20 to 40% according to users — and far less pollutants Deutz air-cooled diesels — 5 to 500 bhp

DEUTZ®
AIR-COOLED DIESELS

- We stock rebuilt: starters, generators, injectors, for Deutz
- We have complete road service since 1955
- We supply free application engineering
- We have facilities for any mechanical fabrication required to apply new Deutz diesels

Cheese enchilladas featured in budget

ROSEMONT, Ill. — Whether it's budget casserole for family, guests or a church supper, everyone's certain to be pleased with Cheese Enchiladas. This is a sunny dish with its colorful and appetizing tomato sauce and melted cheese nestling right on top of the tomato red color.

This recipe calls for tortillas made the American way which is similar to crepe preparation, using an eight-inch skillet. The batter is a combination of flour, yellow corn meal, milk and egg. These tortillas may be stacked between waxed paper, wrapped and frozen for ease of preparation. A mildly spicy meat filling is rolled into the "tortillas" which are then covered with tomato sauce. Cheese is added during the last five minutes of baking time to give a smooth melt overall.

(Turn to Page 133)

Appetizing flavors abound in Cheese Enchiladas. They're made from Americanized, homemade "tortillas" topped with tomato sauce and melted Cheddar cheese.

The satisfaction that comes from doing a good job of farming

It's a great feeling to know that you are the master of your farmlands . . . that when you treat your soil right, it will treat you right. Liming is one of the most important factors in keeping your soil in the highest productive range. A good pasture with a pH of 6.5 or higher, for example, will make 300 to 400 lbs. of beef per acre and produce up to $100 gross income per acre. This means with the help of lime, profits from pastures can compare favorably with feed or grain crops.

Cheese enchilladas

(Continued from Page 132)

For menu-making purposes, this is an easy casserole. It goes well with a salad of greens and orange sections. If one would like an authentic south-of-the-border dessert, there's Caramel Flan which is creamy and harmonious. It also adds all-important milk to the menu in very acceptable fashion!

CHEESE ENCHILADAS

Tortillas

Yield: 12
2 teaspoons butter
1 cup all-purpose flour
½ cup yellow corn meal
½ teaspoon salt
1⅔ cups milk
1 egg

Meat Mixture

Yield: 3 cups
2 tablespoons butter
½ cup chopped onion
1 clove garlic, minced
1 pound ground chuck
2 cups water
1 teaspoon oregano
½ teaspoon salt
1/8 teaspoon cumin

Tomato Sauce

Yield: About 3 cups
2 tablespoons butter
½ cup chopped onion
1 can (1 lb. 12 oz.) tomatoes
1 can (10¾ oz.) condensed tomato soup
1 can (8 oz.) tomato sauce
2 tablespoons chili powder
1 cinnamon stick
2 whole cloves
1 teaspoon salt
1 teaspoon sugar
¼ cup butter

Enchiladas

2 cups shredded Cheddar cheese
1 cup chopped Spanish onion
Black olives
Parsley

For Tortillas, melt butter in an 8-inch skillet. Combine flour, corn meal and salt in mixing bowl. Add milk, egg and melted butter (set aside skillet); beat until smooth. Heat skillet over medium heat. For each tortilla pour three tablespoons batter in skillet; immediately rotate pan. Cook until light brown; turn and brown other side. Stack between sheets of waxed paper until ready to use. (Tortillas may be frozen.)

For Meat Mixture, melt butter in skillet; saute onion and garlic. Add meat; brown. Drain off excess fat. Add water, oregano, salt and cumin. Simmer until liquid is almost evaporated (about ¾ hour).

For Tomato Sauce, melt butter in skillet; saute onion. Add tomatoes, tomato soup, tomato sauce, chili powder, stick cinnamon, cloves and salt. Simmer, stirring occasionally, until reduced ⅓ (approx. 45 minutes). Strain; add sugar and butter. Stir until butter melts.

For Enchiladas, divide evenly among the twelve tortillas meat, 1 cup cheese and onion; roll. Place in buttered 13 x 9 x 2-inch baking dish; pour over tomato sauce. Bake in preheated 350° F. oven 15 minutes or until heated through. Top with remaining 1 cup cheese and bake until cheese is melted, about 5 minutes. Garnish with olives and parsley.

Makes six servings.

CARAMEL FLAN

Caramel

½ cup sugar
¼ cup water
Dash cream of tartar

Custard

3 cups milk
6 eggs, slightly beaten
⅓ cup honey
1½ teaspoons vanilla

For caramel, bring sugar and water to a boil in heavy saucepan or skillet over high heat, stirring constantly until sugar dissolves. Stir in cream of tartar. Stop stirring. Reduce heat to low. Wipe sugar crystals from edges of pan with pastry brush dipped in water. Boil syrup over low heat, without stirring, until syrup turns a golden brown, about 15 minutes. Quickly pour syrup into a round 9 x 2-inch baking dish or a shallow 1½-quart casserole tipping immediately to coat bottom and part way up sides of dish. Caramel will harden immediately.

For custard, heat milk just to boiling. Stir into eggs gradually. Stir in honey and vanilla. Pour into caramel-coated dish. Set custard in large shallow baking pan on lowest oven rack. Pour hot water in baking pan to within ½ inch of top of custard. Bake in preheated 325° F. oven 55 minutes or until a knife inserted halfway between center and edge comes out clean. (Custard will shake slightly when removed from oven.) Remove from water immediately and place on wire rack to cool. Chill several hours. Run spatula around edge of custard to release edges. Place shallow serving dish over custard; invert onto serving dish. Caramel will run freely over custard.

Makes six to eight servings.

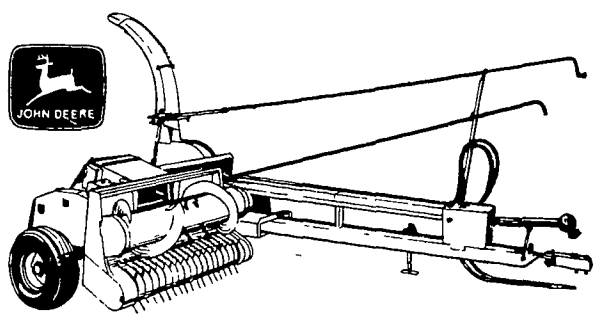
90-hp 4040

Everything the 4030 had—and more

Ten more horses — that's the first thing to grab your attention on the 4040. But it also packs more built-in working weight on a longer wheelbase. It's a really solid performer in the field.

And the 90-hp 4040 is just as maneuverable as its smaller predecessor. Stop in for full information on the 4040 — a quick-handling, peppy performer. It's one of the NEW IRON HORSES® with more horses and more iron.

The new 3940 Powr-Mizer™ Forage Harvester . . . new cutterhead, new controls, more capacity

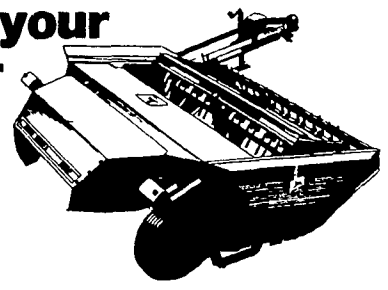


Now there's a forage harvester that squeezes extra work out of your tractor's horsepower. The new 3940 from John Deere. The 3940's power-efficient design begins with our new Dura-Drum™ cutterhead ... uneven forage doesn't stand a chance against its 36 segmented cutter knives. And if a knife gets damaged, you'll find it's easy and inexpensive to replace one of the short, segmented blades.

New easy-adjust controls help you keep running at peak performance. It only takes one wrench and less than two minutes to set the shear bar at the proper clearance. No bending. No mess. No shields to remove. It's so easy, you'll adjust it every time you sharpen the knives.

All these power-efficient features of the 3940 add up to let you harvest more forage with your present tractor. Come on in and let us show you how the 3940 can squeeze more capacity out of your 80- to 130-hp tractor.

The 7¼-foot-cut 1207... maneuverable enough to conquer your irregular hay fields



Crooked fence lines, uneven terrain, steep hillsides — they can steal you haying efficiency. Tackle them with our 1207 Mower/Conditioner—the compact machine with big-capacity features. Adjustable roll pressure, platform float, platform stabilizer, flotation tires tucked close to cutterbar, side-to-side and front-to-back balance...all combine to conquer small, irregular fields.

Dairy herd

(Continued from Page 127)

The Meyers keep a total of 170 head of Holstein on their farms. They operate 325 acres, which includes rented fields.

The milking string is housed and milked in a bank barn that has been remodeled and enlarged. Two short and two long rows of comfort stalls are the backbone of the stable. The entire family gets involved at milking time, with three members on the udder detail and the fourth in charge of feeding.

Proper ventilation is an essential part of good management, Jim reminded. The Meyers' cow stable features an old hay fan for heavy-duty air circulation during the hottest weeks of the year, three thermostatically controlled exhaust fans, and several small fans to move air across the barn. "We really try to watch it, to make sure there's plenty of fresh air around," the young man acknowledged.

As on any farm, good breeding, feeding, and management add up to high production. At Marbet Farms, the records haven't gone through the ceiling, but they've been consistent. Nearly half the herd has records of 20,000 pounds of milk or higher. The top milk producer of recent months is a Killinsdale Ivanhoe Jack daughter with a record of 26,734 pounds of milk, a 3.4 per cent test and 906 pounds of butterfat. The high cow for butterfat is sired by Ivanhoe Star She produced 20,228 pounds of milk testing 4 7 per cent and yielding 960 pounds of butterfat.

Some of the higher lactations turned in by first-calf heifers are 21,150 M, 3.7, 776 F, by a Harrisburg Gay Ideal daughter; and 21,153 M, 3.2, 668 F by a 2-year old sired by Whittier Farms Apollo Rocket.

"I think we can go further yet," said the elder Meyer confidently. Commenting on the dairy business in general, he said: "The good dairyman is going to make it, the poor dairyman is going to have to get out." Clyde added: "I think it looks pretty good as long as you're willing to put the labor into it." Mrs. Meyer is a little more reserved and cautioned: "As long as they don't try to overdo it." Son Jim assured: "Bigness isn't the answer anymore."

All in all, the Meyers are satisfied with the way things are going for them. "We don't have anything to complain about really," offered Clyde in response to a question regarding management difficulties. They are not experiencing any significant degree of problems. Their herd replacement rate, according to 1978 DHIA figures, stands at 19 per cent.

As the interview was nearing its conclusion and the sky above Lebanon County was showing signs of still more rain, Clyde gave the matter of problems a second thought.

"Getting hay made," he laughed. "Getting that high quality feed." That's one of the most important considerations for obtaining high production at Marbet Farms.

Clyde, Jim, and Marvin Meyer operate Marbet Farms in partnership. Also involved is Mrs. Meyer, who helps daily with milking chores.

Talmadge questions proposed wildlife pact

WASHINGTON, D.C. — U.S. Senator Herman E. Talmadge, chairman of the Senate Committee on Agriculture, Nutrition, and Forestry, has warned that a proposed International Convention on Migratory Species of Wildlife could have "far-reaching effects into all types of land uses in this country."

In a Senate statement recently, Talmadge said an international conference is scheduled for next month in Bonn, West Germany, for the final drafting of the proposed wildlife convention. He said the U.S. State Department plans to participate.

Talmadge said he had submitted 20 questions to Secretary of State Cyrus R. Vance concerning U.S. involvement in the proposed agreement and its impact on existing Federal and State laws and regulations dealing with migratory wildlife. Talmadge especially wants to know from Vance if the proposed convention agreement would represent a formal treaty, requiring Senate ratification.

"It is inconceivable to me that the Senate would approve any international agreement which would give groups of other nations cart blanche authority over the uses of public and private lands in the United States," Talmadge said.

Talmadge cited reservations and objections to U.S. participation in the proposed convention in its present form by the Wildlife Management Institute and the International Association of Fish and Wildlife Agencies. The latter organization includes state, provincial, and federal fish and wildlife agencies in Canada, Mexico, and the U.S. The International Association, Talmadge said, has recommended that "the United States, Canada, and Mexico cannot be participating members and certainly not signatory parties to the proposal in anything like its present form."

"Perhaps we should heed the warning of those who are legally responsible for wildlife and take a closer look at where we stand with regards to the proposed convention," Talmadge said in the Senate statement.

"Certainly there would be no opposition to assisting other nations with their wildlife conservation efforts," the Georgia Senator said. "But simultaneously we must protect our own wildlife conservation programs which are without question among the most advanced and successful in the world."

Berks Grange has sewing winners

HARRISBURG – Berks County Pomona Grange No. 43 had two winners at the National Grange Sewing contest judging at the State level at the Pennsylvania State Grange Headquarters in Harrisburg on May 22.

Gloria Romig (Mertztown R1), received first place in the tailoring category, adults sewing tailored coats and suits for anyone 13 years of age and over for self or another person. Her garment has been sent to New York for the National Judging on June 5. She is a member of Pioneer Grange, located in Topton.

Jane Yeager, daughter of Mr. and Mrs. William Yeager, Hamburg, received second place in Teen Garments. Any type garment made by a contestant 13-17 years of age, for themself or another person of the same age. She is a member of the Kutztown Grange.

Mrs. Romig's award at the State level is a 12 speed mixer. Jane's award a 1200 watt travel turbo blow dryer with 3 speeds and settings.

Farm-city partnership in economic progress to be theme

HARRISBURG – Pennsylvania Agriculture Secretary Penrose Hallowell has announced the annual reorganization of the Pennsylvania Farm-City Week Council, which has begun planning for the 1979 Farm-City Week in the Commonwealth.

Farm-City Week, sponsored by the Kiwanis International, focuses public attention on the interdependence of Pennsylvania's rural and urban communities. This year will mark Pennsylvania's 24th Farm-City effort.

Past themes for Farm-City Week, according to Secretary Hallowell, have stressed the farm-city partnership for economic progress. This year the Secretary said the theme is expanded to "Farm and City, Partners in Economic Progress-Pride in the Past and Faith in the Future."

"The new addition to the theme reflects the recognition of the different contributions of rural and urban Pennsylvanians to our heritage and tradition," Hallowell said. "This also reflects our confidence that rural and urban Pennsylvanians will go on working together to build a strong state and a properous future for our children and grandchildren."

Secretary Hallowell announced that Fred Bubb, director of the Soil Conservation Service in Harrisburg, was elected chairman of the State Farm-City Council, and that Mike Krauss, director of the Bureau of Rural Affairs, Pennsylvania Department of Agriculture, was elected vice-chairman.

He said plans for the 1979 Farm-City Week, scheduled for November 15 to 22, include increased participation by the Administration and such farm organizations as the Grange, 4-H groups and the Pennsylvania Farmers Association, as well as increased publicity.

"We are looking forward to working with the Kiwanis and all those involved with Farm-City Week to use this special observation as a way to make rural and urban Pennsylvanians more aware of each others' different lifestyles and needs, and to alert all Pennsylvanians of the need for farm-city partnership in economic progress," Hallowell said.

Income from wells guaranteed

HARRISBURG — Pennsylvania landowners are guaranteed at least one-eighth royalty on oil or natural gas recovered from their property, according to a bill, S.B. 568, that was passed by the State Senate last week. The legislation is now before the House. The minimum royalty rate would also apply to old wells which undergo new drilling, deeper drilling, or other procedures to increase production.

Angus cattle sold for record prices

ST. JOSEPH, Mo. – Prices of registered Angus cattle sold at auction during the first seven months of the American Angus Association's 1979 fiscal year are at an all-time record high reports Dr C.K. Allen, executive vice-president of the nation's largest beef registry association

During the seven-months period the price of all cattle sold at auction averaged $1,336, up from $792 a year ago. The average price of bulls stood at $1,740, compared with $976 a year earlier, while cows and heifers have averaged $1,073, compared with only $662 in 1978.

The number of auction sales held, and the number of head sold at auction have also increased dramatically, Allen said. During the period there have been 405 auctions compared with only 336 a year ago. The number of females sold at auction this year was 17,410 compared with 13,956 a year earlier. The number of bulls sold at auction during the period was 11,377 compared with 9,820 in 1978.

At 82 auctions in April, bulls outnumbered the females, indicating both a strong demand for Angus bulls, and the retaining of heifers by many breeders for herd rebuilding. During the month, 2,866 bulls averaged $1,939 compared with an average of $1,059 last April. The 2,594 females averaged $1,184, up from only $710 in April 1978.

Most registered Angus cattle are not marketed at auction, but rather are sold at private treaty. Auction prices, however, are the only ones available for comparison, and they represent a cross section of Angus cattle in all sections of the country. The largest number of auctions are production sales, where a breeder sells the cattle he has raised. There were 46 of these sales in April. Next are the 34 consignment sales, made up primarily of cattle consigned by breeders to state and local Angus association auction sales. The other type of sale is a dispersion, when an Angus breeder reports he is going out of business and sells all or nearly all of his herd. There were only two of these sales in April.

Md. roadside market directories ready

COLLEGE PARK, Md. — It ooks like a great year for strawberries in Maryland. Both quality and quantity of those luscious red fruits are reported to be the best in recent years.

The famed strawberry auction market at Princess Anne (Somerset county) opened May 14 on Maryland's lower Eastern Shore — a few days later than normal — and an all-time high price of $20 for a 16-quart crate was established in the first week of trading.

Roadside stands and pick-your-own operations on the western side of the Chesapeake Bay were expected to be open for business by Memorial Day — except for those in the mountains of western Maryland.

The season has already passed for locally produced fresh asparagus; but Maryland-grown spinach of fair quality and condition was available May 21 at the Maryland Wholesale Produce Market in Jessup.

First-of-the-season radishes from New Jersey were also reported on the Maryland market by the Federal-State Market News Service.

Whether one wants to make up a family outing and pick his own, or simply stop by a roadside stand for fresh produce, he can find locations and telephone numbers in two free directories published last year by the University of Maryland's Cooperative Extension Service.

Single copies of the free leaflets may be picked up at most public libraries and from local Extension offices in every county, as well as in Baltimore city. One can look for the following titles on bulletin distribution racks: Roadside Markets in Maryland (AREIS No. 15); Pick Your Own Fruits and Vegetables in Maryland (Extension leaflet 76).

Because of the expected large volume of requests, one should not ask to have copies mailed to him, but pick up the leaflets in person, or ask a friend to get them.

Energy tips offered

HARRISBURG — The Governor's Energy Council is offering a free brochure on how to save energy with a car. Called the "Automobile $ave Driving Guide," the publication is available by calling the GEC toll-free energy conservation hotline at 800-882-8400, or by mailing a postcard to The Governor's Energy Council, 1625 North Front Street, Harrisburg, Pa. 17102.

Information in the brochure don't just include driving suggestions, but also tips which might be helpful when buying a new car and servicing any vehicle.

Panama hats were first made in Ecuador. Panama, however, was the chief center of distribution.

Sale Reports

A 20 acre tract of land 1/2 mile west of White Horse, Lancaster Co., Pa. was sold at public auction May 25 for $175,000.

Included in the sale were a stucco dwelling, bank barn and a tobacco shed The property was bought by Jonas E. Stoltzfus, R.D. 1, Gap, Pa. from Edward and Linda Glick.

Auctioneers were Robert E. Martin and Son and Frank E. Steller.

PUBLIC SALE

OF 17 ACRE FARM

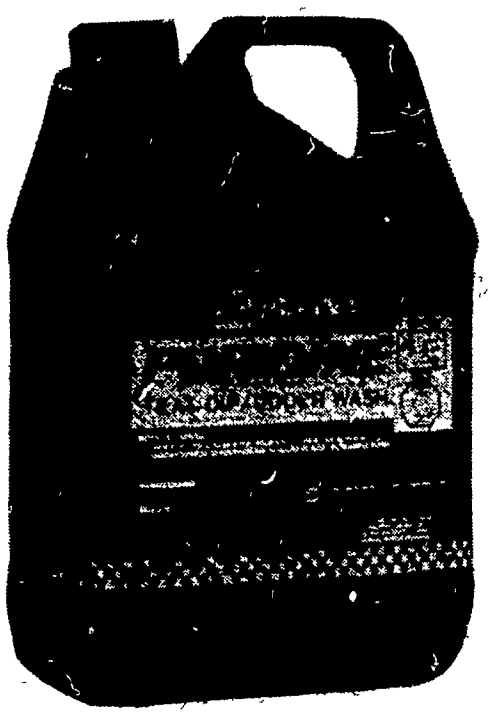
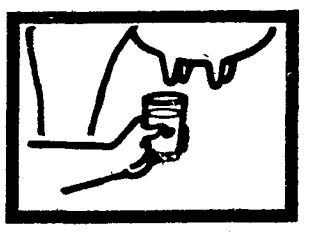
TWO PURINA EXCLUSIVES

FOR DAIRYMEN



AN INDUSTRY FIRST!

A TEAT DIP...



USE UNDILUTED

...AND AN UDDER WASH

USE ONE OZ. PER 5 GALLONS OF WATER

PURIDINE IS BOTH...

PLUS. . .

WITH PURIDINE YOU GET THESE ADDITIONAL UNIQUE BENEFITS

- **SPECIAL EMOLLIENTS**
  used in a skin softening system that helps keep teats soft, reduces chapping and irritation.
- **CONTROLLED VISCOSITY**
  New Puridine is thicker—clings to cow's teats better for additional protection against mastitis from milking to milking.
- **ONE PERCENT IODOPHOR**
  Highly effective against the spread of organisms which may cause mastitis.
- **CONTROLLED pH**
  (4.0 to 4.4) helps prevent irritation to skin.

PURINA DAIRY CLEANER

Research Proves Purina Dairy Cleaner Comes Out Ahead Of Leading Competitors In:

- **CHLORINE STABILITY.**
  After 40 weeks of storage, three major competitive products lost from 70 to 99 percent of their chlorine. New Purina Dairy Cleaner lost only six percent. NEW PURINA DAIRY CLEANER HAS A FIVE YEAR SHELF LIFE.
- **SOLUBILITY.**
  Dairy Cleaner will disperse in the wash solution quickly with little or no lumping.
- **REDUCED ALKALINITY.**
  for a milder, safer product.
- **RINSIBILITY.**
  The rinsing and draining characteristics of new Purina Dairy Cleaner are excellent. Leaves lines and tanks spotless.
- **ACTIVE CLEANING INGREDIENTS.**
  86.7 percent of New Dairy Cleaner is active ingredient — 30 percent more than some major competitors.
